>Fredo Corleone. You may recall that, in the Godfather, it was Fredo's
>brother who killed him.
>
>She never advocated anything.

Whatever. It still was seen by advertisers as controversial, according to my ad industry sources. It appears the spots were not supposed to air on the network, anyway. Not being network people they didn't consider the fact that all spots aren't intended for all markets. If a New York area dealers are having a promotion it puts dealers in other no-promotion markets in a tight spot to hear abou6t great deals that aren't mean for them.

It doesn't matter if she actually advocated anything. It's the perception of advocacy. Most of my NYC friends who heard it considered it to be a call for an assassination.

>Funny how GM (for the most widely-cited example) says otherwise, if one asks
>them. They say they were prompted to pull their ads by the fact of the
>change in format (they had bought WLIB to reach the Caribbean market), not by
>the content of the new format.

Have you spoken to GM or their agency? At least in New York it's always been understood that controversial programming was off limits for these advertisers.

>Funny how Ford immediately started advertising THEIR certified used cars on
>WLIB as soon as GM stopped advertising theirs...

I was under the impression that advertising is placed by the Tri-State
Ford Dealers Association. Each company has different policies.
Remember when Snapple was pulled from Limbaugh when it was bought by
Quaker? Limbaugh practically made the product what it is.

>> I think the archive their shows on the net.

>Rich, I used to think you were so well-informed. Now, I begin to see
>otherwise.

>AA maintains no archives.

Hmm. The publicity I saw indicated that their site was getting a lot
of hits and shows were archived. Perhaps they meant the fan site. It
still means the shows are available to the general public, in archived
form, for a period of time.

My link is directly to the stream and doesn't access the site.

My basic complaint is the inaccurate hype that inplies stations are
carrying the entire Air America lineup. WJNO, West Palm, is on that
list. They don't specify that WJNO is carrying only one show. They
lead the reader to believe it's all there. It isn't.

After the loss of Los Angeles and Chicago, I believe WLIB is the only
station carrying the fulltime 6a-11p schedule.

# 1189. rant: ads for illegal products

Newsgroup: rec.radio.broadcasting
Date: 2004-05-17 18:14:44 UTC
From: Doug Smith W9WI <w9wi@invalid.invalid>
Message-ID: <c8avek$hss$1@xuxa.iecc.com>
Source record: 5228

On my way to the Dayton Hamvention last Thursday, I happened to hear the last few seconds of an ad on WNRQ-105.9 (Nashville). Listeners were invited to "Go Stealth"; to call 800-695-7703 to buy "The Phazer", which would make their car invisible to police radar and guaranteed to reimburse buyers who get speeding tickets.

I've found this device on the Internet:
http://www.jammersstore.com/p_phazer.htm

And, I've found this decision:
http://www.fcc.gov/ogc/documents/opinions/1998/rockymtn.html

in which the Court of Appeals finds the FCC was justified in prohibiting Rocky Mountain Radar from marketing a similar device.

The FCC found this device was not certified under Part 15, and *could not* be certified, as its *intended purpose* was to interfere with the licensed police radar service.

==========

As a motorist who's sick and tired of being harassed & tailgated every time I dare pass while going less than 20 over the limit... and a law-abiding broadcaster & ham... I find this ad simply amazing.

We have a product that is ILLEGAL to market and ILLEGAL to use. Its purpose is to intentionally interfere with a licensed radio service. And, more fundamentally, to allow motorists to intentionally violate the law without risk of prosecution.

I wonder what WNRQ would say if the Nashville TV stations started airing ads for 500-watt FM transmitters for use by pirate broadcasters?

(and I don't mean to pick only on WNRQ. I've also heard this ad on WFAW-AM in Wisconsin, and at least one other station.)

On 17 May 2004 15:10:12 GMT, mindseye100@hotmail.com (The Bougieman) wrote:

>I was listening to the Dr. Laura Schlessinger radio talk show the
>other day. Have you heard this? I freakin' love it. Gets me all riled
>up. People from all over North America call in (over 60,000 callers a
>day!) and ask her advice on their daily quandaries.

Let's put this into perspective. There may be 60,000 callers who attempt to reach the show. Telco can give you a report on the number of attempted calls. Only a few of those actually make it to the guillotine. I'm surprised there aren't more masochists within some radio signal.

To be fair I have to reveal that Laura Schlessinger and I intensely dislike each other. She once tried to get me fired because I consistently pointed out that my host, Dr. Joy Browne, was a real psychologist and Schlessinger was s Physiologist. Howard Stern called her a "gym teacher."

>Well, needless to say, Dr. Laura is a moronic hag. Have you seen this
>hypocrites un-doctored nude pictures on the net?

This is very old stuff. As much as I dislike and disrespect her I think the release of those pictures was a terrible betrayal of trust. How many of us took such pictures when we discovered Polaroid cameras? Supposing you had a companion and you took pictures of each other. It would have been done with the full expectation of privacy between you both.

The pictures were taken before she became perfect. So she lied a little in denying thery were her. She was finally pressured into admitting to a little imperfection as a young woman. Certainly nothing she'd do as an old woman who has seen the light, accepted God and a huge paycheck.

>Eventually the source was
>revealed to be veteran Los Angeles radio broadcaster Bill Ballance, a
>man who was pivotal in getting Schlessinger her start in radio, and
>took the photos in 1978, while the pair of them were having an AFFAIR
>during Schlessinger's first marriage! Oh sweet irony, how I adore ye.

Again, this was pre-perfection. I had no respect for Schlessinger, so there was none to lose. However, I did respect Ballance. His betrayal of her caused me to lose respect for him.

>Another classy moment from a show I heard last year was when she
>claimed that society can't allow gay people - or as she horrifically
>calls them: "biological errors" - to get legally married, because "a
>legal precedent would be set" and we'd then have to "allow people who
>have sex with their parents to get married to one another" (?!?) That
>shit is just crazy enough to be hilarious.

It's shtick. Unfortunately for her it cost her network the loss of $30 million in billing. The Gay community was extremely effective in targeting her advertisers. When there's no legitimate argument for something they grab at straws and suggest it'll result in people marrying animals. The Radical Religious Right is very creative and seem to turn their sexual fantasies into predictions of the future.

>Mind you, her homophobic
>comments were determined to be in violation of the human rights
>provision of the Canadian Broadcasting Code of Ethics, and she lost
>the majority of her stations in Canada.

The US has no such code of ethis. In fact, with our FCC we never know what the rules are until we've broken them and have a whopping fine staring us in the face.

>The important thing to remember kids, is that Laura Schlessinger is
>neither a medical doctor nor accredited in a discipline one would
>traditionally look to for the generation of expertise in moral,
>societal, or spiritual matters. She's just a lying hypocritical
>fuckface with a radio show.

Listen to her show with the same rubbernecking approach you'd take at seeing a serious traffic accident. The only difference is the accident was an accident. Calling the show is simple masochism.

She is a Doctor of Physiology. She's not a Theologian (her book was written by a Rabbi). Taking her advice is like hiring a Proctologist to perform brain surgery.

Here's a link to an article about murdered DJs and radio hosts.
http://radio.about.com/library/weekly/aa080303a.htm

I don't know about anyone else, but I was assaulted at gunpoint one day at our local radio station by a crazy ex-employee. Plus, I've been stalked several different times. All of those events happened back in the late 70s and early 80s. To me, it was a shock when it first happened to me, but now I have come to recognize this phenomenon as a typical job hazard of the radio industry. Radio draws nutcakes. That's what drew me to the industry to start with!

Has anyone here had any such experience in their background?

> Have you spoken to GM or their agency?

Here's the boilerplate with which GM is responding to queries:

Thank you for contacting the General Motors Customer Assistance Center. We appreciate your comments and opinions regarding advertising for General Motors on WLIB 1190-AM.

General Motors learned the week of May 10th, 2004 that radio advertising time that GM bought on WLIB 1190-AM, previously an affiliate of American Urban Radio Networks, continued to run without GM's knowledge or authorization after WLIB changed its affiliation to Air America. GM originally bought this advertising time when WLIB's format was Caribbean-based music, targeted to an African-American audience, which was part of GM's ongoing effort to reach this important group of consumers. With the change to a new, untested format, our advertising on WLIB would no longer reach the same consumers we were originally targeting, and we have opted not to continue advertising on WLIB at this time. We are sorry if this decision has offended you in any way and we hope you understand our position.

If you should need to contact us in the future, simply reply to this message or call our General Motors Customer Assistance Center at 1-800-222-1020. Customer Relationship Managers are available Monday through Friday from 8:00 a.m. to 11:00 p.m., Eastern Time. Please reference service request number 1-217075972.

Again, thank you for contacting General Motors.

Carol Talley
Customer Relationship Manager
General Motors Customer Assistance Center

[ end boilerplate ]

If there's any content reason for the termination of the ads, GM isn't admitting it.

>The FCC found this device was not certified under Part 15, and *could not* be certified, as its *intended purpose* was to interfere with the licensed police radar service.<

Yes indeed. RMR obeyed the ruling, too. They took that particular model off the market.

Then, they redesigned the case, changed a few electronic parts, gave it a new model name and number...and went right on selling it. AFAIK, the FCC hasn't caught up with them yet.

>Its purpose is to intentionally interfere with a licensed radio service. And, more fundamentally, to allow motorists to intentionally violate the law without risk of prosecution.<

Only problem is, the @#$%^&*ing things don't work. They assume that the cop can't tell that a vehicle which spits "23 mph" or "360 mph" on their radar, while passing everyone else on the Interstate, is using a jammer. There may be some dumb cops out there, but they're generally not THAT dumb. Most people who plug these toys also don't realize that a cop does not have to write down a specific speed on your ticket. He or she can legally write "in excess of <insert speed limit here>," assuming that is an accurate account of what happened...rendering any false reading because of a jammer irrelevant.

According to the car magazines which regularly test such so-called jammers, they only work at such close range (if they work at all) that by the time they emit their interfering signal, the cop has already measured your speed. The only radar and laser jammers which really work, you can't afford, and you would be jailed immediately and forever if you had one...they belong to the military.

Many jurisdictions have invoked "interference with a police officer" statutes to arrest and jail motorists attempting to use jammers.

> Are radio sales jobs all commission?

Back in the '60's. when I worked for McClatchy (Newspapers, tv, radio in the Central Valley of CA) as a newsman, I happened to learn one day that their salesmen were all salaried.

I'd never heard of that, and asked the sales manager, Well, then what's their incentive to sell?

And he said, if you sell enough you get to keep your job.

That's still the only place I know where they were not pretty close to 100% commission.

And then, McClatchy was different in a lot of ways.

Hasn't NYPD Blue in the last couple of seasons used the term "bullsh*t" a
few times? This is on ABC (over the air).

# 1202. CHAMPAIGN-URBANA -- Assistant Director for Technology (Chief Engineer) WILL-AM-FM-TV

Newsgroup: rec.radio.broadcasting
Date: 2004-05-18 02:45:25 UTC
From: dperry@uiuc.edu
Message-ID: <c8btc5$hei$1@xuxa.iecc.com>
Source record: 5241
Cross-posted to: rec.radio.broadcasting,rec.radio.noncomm

ASSOCIATE DIRECTOR FOR TECHNOLOGY
(Chief Engineer)
Division of Broadcasting, WILL AM-FM-TV
University of Illinois at Urbana-Champaign

THE STATIONS: WILL-AM, WILL-FM, and WILL-TV are public broadcasting stations licensed to the Board of Trustees of the University of Illinois and affiliated with NPR, PRI, and PBS. WILL-AM/580, on the air since 1922, operates 24 hours per day and is primarily a news and information station serving more than half of Illinois and half of Indiana with a directional antenna system. WILL-FM/90.9, established in 1941, is the most powerful FM station in Illinois at 105,000 watts on a 1,000-foot tower and is a 24-hour primarily classical music station. WILL-TV, founded in 1955, provides public television programming to east central Illinois. The stations are housed in Campbell Hall for Public Telecommunication, a new broadcasting facility on the university campus.

THE LOCATION: The University of Illinois is located in the adjacent cities of Urbana and Champaign, Illinois that offer the advantages of medium-sized city living (110,000 population), with easy proximity to Chicago (135 miles), St. Louis (175 miles), and Indianapolis (120 miles). The university setting (38,000 students) provides a rich cultural environment, many sports and entertainment events, and a variety of recreation facilities. Local schools, libraries, and park systems are excellent.

THE POSITION: This is a full-time academic-professional position. The employee reports to the radio and television station managers on all technical matters related to the individual stations and to the director of broadcasting on major technical initiatives affecting the Division of Broadcasting. The employee will:

Be responsible for maintenance and operations of the technical infrastructure of the WILL stations, including satellite, subcarrier, remote broadcasting, all transmitters, and AM directional antenna arrays.

Supervise engineers and engineering operations staff, acting as a mentor to encourage personal and professional growth.

Utilize emerging technologies including radio/television digital production, automation and transmission, computer-based audio and video platforms, and the latest on-line program delivery systems.

Participate in goal setting and planning, establish priorities and meet deadlines for all technical projects.

Prepare budgets and supervise the acquisition and installation of all broadcast equipment.

Assure compliance with all FCC and University of Illinois rules and regulations.

QUALIFICATIONS: A baccalaureate degree in electrical engineering or similar field, SBE certification, at least 5 years' work experience in broadcast engineering, preferably in both radio and television, and extensive broadcast engineering management experience with well-developed interpersonal and management skills are required. Additional requirements:

A thorough understanding of digital theory and emerging computer technologies used in broadcasting, including experience with the ENCO DAD or similar audio technology.

Substantial experience in radio and television studio and transmitter operation and maintenance, including experience in the measurement and adjustment of the performance of AM directional antenna arrays.

Thorough knowledge of FCC broadcast rules, regulations and licensing requirements.

Strong leadership skills and the ability to maintain personal relationships in accordance with the Character and Aspirations Statement of the Division of Broadcasting.

SALARY AND BENEFITS: Starting salary is dependent on qualifications and experience. The University of Illinois offers a very generous benefits package-including 24 vacation days annually, health insurance, life insurance, disability insurance, choice of three retirement options with an employer contribution, sick leave, opportunity for advanced education, and opportunities for professional growth.

TO APPLY: Send a complete resume with the names of three professional references to the address below. Receipt of applications will be acknowledged, and should be received by July 1, 2004, for full consideration. The position will be available as soon as possible following a decision by the search committee. Applicants are strongly encouraged to request a packet containing further information before applying. The information packet is available from and applications should be sent to:

Elizabeth Weathers, Secretary to the Director
Campbell Hall for Public Telecommunication
300 North Goodwin Avenue
Urbana, IL 61801-2316
Telephone: 217/333-0850
E-mail: eweather@uiuc.edu

The University of Illinois is an affirmative action/equal opportunity employer.

NOTICE OF AVAILABLE POSITION
DIVISION OF BROADCASTING
BROADCAST RESEARCH/OPERATIONS SPECIALIST
(Traffic Manager)
University of Illinois at Urbana-Champaign

THE POSITION: Full-time academic professional position; 12-month appointment. The Traffic Manager is a member of the WILL-TV Programming Department, and reports to the Program Director.

THE EMPLOYER: The Division of Broadcasting of the University of Illinois operates public television and radio stations serving much of Illinois and half of Indiana. WILL-TV/Channel 12 has been on the air since 1955, and is the primary public TV station serving the Champaign-Springfield-Decatur, Illinois television market. WILL-AM, on the air since 1922, is an all-news and information service. WILL-FM, which began in 1941, offers classical music and jazz. The Division of Broadcasting has approximately 150 people on staff, and is committed to a policy of encouraging the growth and development of its employees. Results are important, and the working environment is friendly, collegial and mutually supportive.

THE LOCATION: The University of Illinois is located in Urbana-Champaign, 135 miles south of Chicago, 130 miles northeast of St. Louis, and 90 miles west of Indianapolis. The University setting (34,000 students) provides a rich cultural environment, many sports and entertainment events, and a variety of recreational facilities. The quality of life is excellent with fine local schools, libraries and shopping areas.

DUTIES: The Traffic Manager performs duties related to traffic, scheduling, operations and shipping in the WILL-TV Programming Department. The employee prepares broadcast logs which direct the activities of other operational personnel, and which meet Federal Communications Commission, University of Illinois and WILL-TV policies and regulations. The Traffic Manager maintains a library of information concerning television programs and station break materials, and researches their content, timing and mode of delivery; implements WILL marketing and development strategies through appropriate scheduling of promotional announcements; maintains quality of playback materials by viewing air product and responding to discrepancy reports; acts as local administrator of WILL-TV's program scheduling software and related server; aids in the facilitation of WILL-TV's digital broadcast plans and seeks out information regarding related issues; communicates with program distributors about the shipping of videotaped programming; ships and receives packages; keeps a record of the department's shipping activities; responds appropriately to emergencies affecting the WILL-TV broadcast schedule; prepares reports as required; performs

related duties as required.

DESIRED QUALIFICATIONS: Baccalaureate degree is required. Candidate must have computer operations skills, experience or special aptitude in dealing with detailed information in an exacting and reliable way, and the ability to work well with others under tight time constraints. Two years' broadcasting experience with demonstrated familiarity in programming-related areas is preferred. Familiarity with ProTrack television scheduling software preferred, but not necessary.

SALARY AND BENEFITS: $30,000 (negotiable) with future merit increases on an annual basis. In addition, there are 24 days of paid vacation annually, paid health insurance, paid life insurance, ample sick leave, disability leave, a pension system and numerous other benefits.

TO APPLY: Send a cover letter, written resume, and the names and phone numbers of three professional references to the address below. To ensure full consideration, resumes should be received by June 4, 2004. Proposed starting date is July 6, 2004. Applicants are encouraged to request a packet containing further information before applying. The information packet is available from (and applications should be sent to):

Elizabeth Weathers
WILL-TV
300 N. Goodwin Ave.
Urbana, IL 61801
(217) 333-1070

AFFIRMATIVE ACTION/EQUAL OPPORTUNITY: The University of Illinois is an Affirmative Action/Equal Opportunity Employer.

The message is clear. It is not particularly funny, and would be no more
funny coming from Michael Savage in regards to Kerry than it is coming from
a host on the other side of the spectrum speaking about Bush.

Actually I read your original post and the replies. Although I have some experience with both copywriting and radio broadcasting (I used to be a DJ - still am one when you count my Internet station) its still a cloudy topic that you raise. Referring to your mp3 site will it be artists only? What's to stop someone else from downloading the music - then you're Napster all over again!

Most of those advertisers have "no controversy" or "no talk" dictates when
they want to be assured of a more neutral context for their campaigns. It
applies to rush or Savage as well as Franken and Rhodes.

# 1212. RFK assassination: New audio!

Newsgroup: rec.radio.broadcasting
Date: 2004-05-19 15:11:21 UTC
From: brad.johnson@turner.com
Message-ID: <c8ftep$tq$1@xuxa.iecc.com>
Source record: 5151

Hello,

If you rolled tape -- or know of anyone else who rolled tape -- on any TV broadcast that aired during live coverage of the assassination of Senator Robert F. Kennedy between June 3rd and the 10th, 1968, please contact me!

I'm interested in any reel-to-reel audio tape that recorded sound from any television broadcast during early June 1968!

Whether it's a network or local television broadcast, whether the sound recording of that broadcast is of good quality or poor quality, whether the audio is distorted, whether it was recorded in a major market or in a minor market, I want to know about it!

It could be audio tape that your parent might have rolled using their old reel-to-reel tape recorder or brand new cassette recorder. Perhaps you vaguely remember a friend or acquaintance mentioning that they rolled tape on TV broadcasts that week. Or you think you know of someone who acquired such a recording.

I'm a collector, so if you have anything like this or know of someone else who does... please email me or have them email me at:

brad.johnson@turner.com
or bkj333@aol.com

P.S. But we don't have to limit this to just TV. I don't rule out radio broadcasts from early June 1968, and am interested in those too!

Thank you!

You can try and explain it away but when someone suggests a father or brother take someone out fishing, particularly a President, and makes a noise imitating a gunshot I take it to mean there's a victim.

I wouldn't be a bit surprised to find the Secret Service would find a gunshot in a boat where the President is present to be a problem. I'd see lots of very wet black suits.

I don't care where the reference comes from. The actual audio names members of the Bush family and clearly implies one is to be a gunshot victim. It's not a terrible stretch to believe the victim would be the President.

Not something mainstream advertisers would like.

I'm crushed that I've lost your respect, but many, many people didn't see the reference as a lie. I listened to the archive (the shows are archived) and there was no doubt the death of the President was the focus.

>admitting it.

I've been in the network business for a long time. The explanation is legitimate. However, GM would not place advertising on Air America even if the numbers were astounding. They don't do controversy.

The real bottom line is that GM didn't buy Air America yet their spots ran there without their permission. The agency should have cancelled the order because of a format change. Perfectly legitimate.

Many agencies are buying minority stations in New York because the stations have made it clear it's discriminatory not to buy them when their numbers exceed white targeted stations. Even though they still don't get the rates they're due, things are improving because of legitimate pressure from highly rated minority stations.

I don't know why you're tapdancing around a comment that clearly suggested the assassination of a member of the Bush family. I'm not a fan of the family but I don't wish death on any of them. To suggest it is damned irresponsible radio.

Make a list of Limbaugh's advertisers. How many mainstream advertisers
are there? Conservative Digest? Limbaugh has been on the don't buy
list for years.

If Laura Schlessinger lost advertisers because of a gay bashing
comment I suspect those same advertisers would drop Limbaugh if they
hadn't already rejected running spots in his show.

Amateur Radio Newsline™ Report 1396 May 14, 2004

Amateur Radio Newsline report number 1396 with a release date of
Friday, May 14, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hamvention 2004 is opening and B-P-L is
still in the
news. Find out the details on Amateur Radio Newsline report number
1396
coming your way right now.

**

HAMVENTION COVERAGE

The 2004 Dayton Hamvention is about to open its doors. One of this
year's
Hamvention themes is going back to the future. Our producer Bill
Pasternak,
WA6ITF, flew in a few days early to find out what it really means for
those who
will be attending the show.

--
Audio report only: Hear it at www.arnewsline.org
--

Bill, Mark Abramowicz NT3V and yours truly will all be at Hamvention
to bring
you all the highlights on next week's Amateur Radio Newsline
report. (ARNewsline(tm))

**

THE BPL FIGHT: B-P-L EXPECTED TO DRAW ATTENTION AT DAYTON

While the latest in ham gear is certain to be grab the interest of
most of those
attending this year's Dayton Hamvention, the topic of Broadband Over
Power
Lines internet access is likely to be on the lips of many. Amateur
Radio
Newsline's Mark Abramowicz, NT3V has more...

--
While not much has happened in the past week on the B-P-L issue, look
for lots
of discussion on the Dayton Hamvention floor. You can expect to see

American
Radio Relay League President Jim Haynie W-5-J-B-P in the middle of it.

We told you here on Amateur Radio Newsline two weeks ago of Haynie's call to
arms and his direct appeal to President Bush to abandon support for B-P-L
technology.

Haynie is convinced Bush has been misled by his advisors. He and A-R-R-L's
Washington corps have asked for a meeting with the president. There's nothing
new to report on that front.

But Haynie says it's important for the ham community to continue to make its
voice heard by writing to the White House, your congressman and your senator
about B-P-L. Even though the Federal Communications Commission turned down
the A-R-R-L's request to extend the May 3 deadline for comments on B-P-L,
Haynie says there are still ways to be heard.

The A-R-R-L's website (www.arrl.org) has helpful tips on writing that letter or e-
mail or picking up the phone and calling your representative in Washington.

Meanwhile, the FCC is now studying the National Telecommunications and
Information Agency report on B-P-L. And while the glowing press release put out
by N-T-I-A touted the possibilities of B-P-L, the technical data in the report
presents another picture.

And that picture is anything but fuzzy. N-T-I-A cites major interference concerns
and suggests the methods used to measure B-P-L interference are inadequate.

It also cites worries B-P-L signals could affect aircraft operations and suggests
more stringent measurement standards and interference mitigation techniques
need to be explored.

Could that B-P-L fast-track train be slowing? No one is willing to speculate on
that, especially since President Bush and F-C-C Chairman Michael Powell appear

to be on the same page in their push for deployment of B-P-L.

Could the F-C-C be convinced to wait for the next N-T-I-A report and table the
issue for a few months? No one knows how to read the tea leaves in Washington.

Tune in weekly to Amateur Radio Newsline and we'll keep you on top of the
issue with the very latest news and views of those close to the B-P-L issue.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.
--

And look for Mark's report on the B-P-L buzz and other topics from the
Hamvention floor during our special program next week produced in Dayton.
(ARNewsline(tm))

**

Ham radio did all it could to help save the life of a stricken runner at a recent foot race in
Indianapolis. Jack Parker, W-8-I-S-H, has the details:

--
Audio report only: Hear it at www.arnewsline.org
--

Thanks Jack. (W8ISH, ARNewsline(tm))

**

RADIO RULES: FCC MKES "MINOR AMMENDMENTS" TO PART 97

The FCC says that it has minor amendments to various Amateur Radio rules. A
bulletin from the ARRL highlights some of them including the most significant
one. It involved revising the wording of Section 97.307(d), which defines
spurious emissions. The updated language imposes a slightly higher standard on
newer transmitters or amplifiers of any power level.

The FCC also has redefined what constitutes an Amateur Radio operator to
reflect the advent of the Universal Licensing System electronic licensee database.
The current rule defines an amateur operator as "a person holding a written

authorization to be the control operator of an amateur station." Under the
revised Section 97.3(a)(1) an amateur operator is "a person named in an
amateur operator/primary license station grant on the U-L-S consolidated
licensee database to be the control operator of an amateur station."

The FCC made these and several other regulatory changes on its own motion
rather than in reaction to any petitions. The decision appeared May 5 in the
Federal Register. The changes become effective June 1st. (ARRL)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard
on bulletin stations around the world including the WB3ERZ repeater serving
South Central Pennsylvania.

**

ENFORCEMENT: CONVICTED MURDERER LOOSES HAM TICKET

A ham serving a prison sentence for the murder of his wife has had his Amateur
license revoked. Roger Thomas Scaggs, the now ex-W5EBC, had his ticket
pulled after the FCC determined that he no longer holds the requisite
requirements to remain a Commission licensee.

On March 6, 1996 Scaggs was convicted of murder in the death of Penny
Scaggs, his wife of thirty-five years. The court record in that case showed that
Scaggs beat his wife to death with a galvanized lead pipe and then stabbed her
several times. He was sentenced to a prison term of thirty-two years and fined
ten thousand dollars.

The Commission says that its character policies provide that any felony
conviction is a matter predictive of licensee behavior and is directly relevant to
the functioning of the Commission's regulatory mission. It says that Scaggs
conviction mandates the conclusion that he does not possess the requisite
qualifications to be or remain a Commission licensee and that his

license should
be revoked. (FCC)

**

ENFORCMENT: NO FISHING COMS HERE

The owners of four trucking companies, two seafood companies and one fishing
boat have all been cited by the FCC for operating without a license on amateur
frequencies. According to the C-Q magazine website, three of the trucking
companies are in North and South Carolina and the fourth is in Idaho. They
were allegedly operating on 10 meters. The fishing boats are in the Pacific
Northwest, purportedly using the 2 meter band. (CQ)

**

ENFORCEMENT: FCC AGAIN WRITES TO K1MAN

The FCC has again written to Glenn Baxter, K1MAN, and the commissions note
has both good and bad news for the Belgrade Lakes, Maine radio amateur. On
the positive side, the April 14th letter informs K1MAN that a review of his
transmissions indicates that he is complying with the Amateur Service regulations
regarding broadcasting and bulletins and station control.

The negative? The FCC alleges that K1MAN is in violation of rules regarding use
of his Amateur station for pecuniary interest and those regarding deliberate
interference to ongoing communications.

Also, the letter again told Baxter that his "felony affidavit complaints" will not be
accepted by the regulatory agency. He was also reminded that all frequencies in
the Amateur Radio Service are shared. No frequency is assigned for the
exclusive use of any station, and that Baxter's station has no greater rights to a
frequency at any particular time than does any other Amateur station. (FCC)

**

ENFORCEMENT: CONSERVATIVE GROUP CALLS ON CONGRESS TO REPRIMAND FCC

A faith based group is chiding the FCC for not acting more decisively in getting
dirty words off the public airwaves. Amateur Radio Newsline's Jim Davis, W-2-J-
K-D, has more:

--

AUDIO

--

Focus on the Family was founded by Dr. James Dobson, whose commentaries
are heard on radio stations world-wide. (Published reports)

**

ENFORCEMENT: FCC CHAIRMAN DOES NOT SUPPORT REVOKING BROADCAST LICENSES

F-C-C chairman Michael Powell says he doesn't support legislation that would pull
a broadcast station license after a third indecency violation. He is not opposed
to high fines to get the attention of broadcasters who step across the indecency
line.

Speaking at the recent National Association of Broadcasters convention in Las
Vegas, Powell suggested that he would support extending indecency regulations
beyond over-the-air broadcasting to other media, such as cable and satellite
broadcasts, but only if the FCC is given approval by Congress.

Powell labels as a "red herring" a proposal by Viacom president Mel Karmazin for
more specific decency guidelines. Viacom owns C-B-S. That's the network which
aired the controversial Super Bowl half-time show with rock star Janet Jackson. (Published
reports)

**

RESCUE RADIO: EMERGENCY TRAINING IN KANSAS

A day-long program on Amateur Radio emergency communications will take
place Saturday, July 24, 9 AM in Kansas. This, at The Salvation

Army, 420 E
Santa Fe, Olathe which is 15 miles southwest of Kansas City.

According to the ARRL Letter, the day begins with "New Ham Orientation,"
sponsored by Johnson County Amateur Radio Emergency Service. This session
will provide an overview of ARES and explain how amateurs can get involved.
Following a lunch break the Kansas Salvation Army Team Emergency Radio
Network will sponsor an ARRL Emergency Communications seminar.

Seats are limited. For additional information contact June Jeffers, KB0WEQ, by e-
mail to kssatern@att.net or call area code 913-856-8674 during normal business
hours, Central time. (ARRL)

HAM RADIO CONFERENCES: CSVHFS IN CANADA IN JULY

More information is now available on the upcoming Central States V-H-F
Conference that has been mailed out and also posted to the conference website.
Included are the latest highlights of conference plans, border crossing tips and
Canadian currency tips. Also posted is the 2004 President's Message along with
last years Noise Figure Measurement Test results and the Antenna Test Range
results.

The conference is scheduled for July 22nd to the 25th at the Delta Meadowvale
Resort & Conference Center in Mississauga, Ontario, Canada. All the latest is in
cyberspace at www.csvhfs.org and the Ontario VHF Association's page at
www.ovhfa.com. We hope that you have a great time. (Peter Shilton VE3AX)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of
America, We are the Amateur Radio Newsline with links to the world from our
only official website at www.arnewsline.org and being relayed by the

volunteer
services of the following radio amateur:

**

RADIO LAW: SAN DIEGO TV SHOP OWNER CONVICTED

Here's the kind of a story you probably have not heard of in
years. How about a
T-V repair shop owner convicted of duping his customers. Jim
Meachen, Zed-L-
2-B-H-F, has the rest of the story:

--
AUDIO
--

The store owner pleaded guilty to ten criminal counts, including
grand theft,
forgery, fraud and false advertising. (listeners reports)

**

EMERGING TECHNOLOGY: DTV AT A SNAILS PACE

The General Accounting Office has issued a report saying that more
than 80
percent of Americans are either unaware or only "somewhat aware" of
the
transition to digital television signals. They are also unaware that
Congress
plans to sell the analog spectrum that will become available when TV
stations
convert from analog to digital.

Lawmakers are counting on the money to help balance the budget.
However, the
digital transition may be years away unless more consumers start
buying digital
TVs to receive the new signals. Current sales of those expensive
digital sets
appear to be fairly flat at best. (Science OnLine)

**

WORLDBEAT - ALBANIA: NEWS FROM ALBANIA

Turning to news from around the world, many noticed the signals from
OH2BH
and OH2PM bouncing in from Albania not long ago. In fact, the pair
made some
6000 QSOs while visiting that nation. They were also there to remind
the world
of Amateur Radio about it's shared responsibility to help those

in need. You are
welcome to join this effort by making your old gear active from
Albania. For U.S.
tax payers, your donations can be processed by the Northern
California DX
Foundation. Contact W6OSP by e-mail to w6osp@aol.com for details.
(N4GN)

**

WORLDBEAT - CANADA: SOME RAC APPOINTMENTS ANNOUNCED

Radio Amateurs of Canada's Board of Directors has approved Eric
Ferguson, V-E-
3-C-R, as the organizations new Treasurer. This, for the term ending
Dec 31st,
2005. Feguson comes to Radio Amateurs of Canada with extensive
banking
experience at the Executive level at a major Canadian bank.

The Board of Directors has approved Dave Goodwin, V-Oh-1-A-U, as the
Director
for Radio Amateurs of Canada's Atlantic Region. Goodwin will
complete the term
of David Nimmo, VE1NN, who resigned in early March. (RAC)

**

WORLDBEAT - UK: NEW 6 METER BEACON ON THE AIR

And members of the United Kingdom's Blacksheep Contest Group have
activated
a new 6 meter propagation beacon located near the city of
Hertfordshire, in grid
square IO91. This, as a replacement for the GB3NHQ beacon which
closed down
some years ago.

The new GB3BAA beacon became operational on 50.016 MHz at 15:10 UTC
on
April 20th, and ground-wave reception reports from Normandy and
northern
England have already been received. Further reports would be most
welcome,
and should be sent to Mr. I. Phillips, G0RDI, by e-mail to
gb3baa@77hz.com (RSGB)

**

DX

In DX, 3-B-9-F-R has been heard operating from Rodrigues Island on 10
meter
FM. He was heard on the worldwide calling frequency of 29.600 MHz

between
1200 and 1400 U-T-C, working Europe. (GB2RS)

Also heard on is A-P-2-J-Z-B in Pakistan. He was monitored on 12 and
17 meters
SSB. Watch 24.955 MHz after 0930 U-T-C and also around 18.110 MHz
after
1445 UTC. QSL direct to the operators call directory address.
(GB2RS)

**

THAT FINAL ITEM: WHO INVENTED THE SCANNER RADIO - REDUX

And finally this week, an update on our recent story of who really
invented the
first scanner radio. We previously reported that a group of
broadcast engineers
working at Cape Canaveral during the early days of the space race
developed the
first scanner radio. This, so that the late NBC newsman Roy Neal,
K-6-D-U-E,
could know when a launch was going to take place.

Well, that is quite true but Harvey Cronen, a S-W-L who is one of our
listeners in
New Jersey has some further information. He says that musician and
inventor
Raymond Scott is the person who holds a patent on at least one form
of
automatic scanning radio.

Harvey sent us a web link to a site that chronicles the life of
Scott. While he is
best known as the orchestra leader on the early NBC television show
"Your Hit
Parade" and as the husband of the late songstress Dorothy
Collins, there was
another side to Raymond Scott that few in the public knew about. It
is all on the
website and it is there where it says that Scott actually patented a
broadcast
band radio receiver which tunes in on stations around the country and
changes
frequency by itself at any given interval. This, says the website,
permitted Scott
to catch most of the nations disc-jockey shows in a brief span and
find out what
tunes are being played.

There is lots of truly fascinating information at this very
informative website

about Raymond Scott, his life, his inventions that impacted on the worlds of
recording and communications as well as his music. It is well worth visiting at
www.raymondscott.com. (H. Cronen)

Student celebrate 50 years of Rock
==================================

Students and staff at South Leicestershire College are celebrating 50 years of Rock and Pop, with their community radio station which returned on Monday May 17th.

The college's own WiggLe FM is back on air again for the fourth year, as a community based radio station with a global audience via the Internet.

As well a wide range of music programmes around the clock, the two-week broadcast features several exclusives, including an interview with happening New York band, Scissor Sisters, and a chance to win a signed copy of their album. Student and presenter Jamie Percival says " We worked hard to secure an interview with them when they played the Charlotte a few weeks ago and now they're on national TV and on the Glastonbury bill."

Media tutor and station manager, Les Eastham, has been busy at the other end of the musical timeline and has tracked down Leicester's first rock and roll band and will be chatting to ex "Dallas Boy", Stan Jones. Says Les; " The Dallas boys were from Leicester and were there at the beginning; probably the first British boy band; and it's great to hear first hand about the early days of rock and roll".

The varied approach of WiggLe FM has gained them a growing audience during their first three May broadcasts and, last year, the students were approached by an Australian station who had picked them up on the world-wide web and who asked if they could borrow some of their specialist shows.

The students on the vocational 'A' level Media course helped plan the station and will be hosting Wiggle FM from Monday 17th May until Saturday 29th May on the 95.1 FM waveband and online.

Rich Wood <richbwood@earthlink.net> wrote in news:c8fteq$uh$1
@xuxa.iecc.com:

> many, many people didn't see the reference as a lie.

The lie was the claim of advocacy.

>From <http://www.newsmax.com/archives/ic/2004/5/12/153908.shtml>,
where the whole flap started:

Comparing Bush and his family to the Corleones of "Godfather" fame, Air
America host Randi Rhodes reportedly unleashed this zinger during her
Monday night broadcast: "Like Fredo, somebody ought to take him out
fishing and phuw."

[ end excerpt ]

This is both a misquote ("somebody ought") and a lie.

Funny how the lie made its way into the trades so quickly, to be repeated
over and over again before the truth could get its boots on.

## 1220. QRK Model 5 console: info sought

Newsgroup: rec.radio.broadcasting
Date: 2004-05-19 22:41:42 UTC
From: electronic_dave@hotmail.com
Message-ID: <c8gnr6$g42$1@xuxa.iecc.com>
Source record: 5159

This is a little 5-pot radio console. I bought it intending to strip out the Shallco attenuators and other parts; but it's in nice shape overall, so now I'm thinking of keeping it together. Problem is, the little plug-in boards (preamps, transformers, line amp, etc.) were removed before I bought it, and it's not obvious just from looking at the thing where they should plug in. I don't have enough free time to attempt repair or even testing of this thing without a schematic. Anybody got documentation for the Model 5? Thanks in advance.

I've been following this thread with interest.

Was wondering how Imus manages to retain so many mainstream national
advertisers given the tone & content of his show ? Rich (or anyone else),
can you please comment on this ? Seems to be an exception to the rule, or
perhaps I'm misinterpreting something.

>
> R: Yeah and let him say some Hail Marys
>
> C: I'll bet Bush does have a little dingy
>
> R: Yeah.. take him out and you know "Hail Mary, full of grace, God is with
> you-" [Randi makes the sound of a blast] ... Works for me.
>
> C: Absolutely, thank you--
>
> R: Thank you... I don't think you can say that anymore. I really don't. You
> will see. No Godfather references when it comes to the Bush family. Nope!

Now, please tell me, where in that transcripet are the words Newsmax
"quoted"?

>From <http://www.newsmax.com/archives/ic/2004/5/12/153908.shtml>,
where the whole flap started:

Comparing Bush and his family to the Corleones of "Godfather" fame, Air
America host Randi Rhodes reportedly unleashed this zinger during her
Monday night broadcast: "Like Fredo, somebody ought to take him out
fishing and phuw."

[ end quote ]

Newsmax lied, made up a "quote" that was much worse than the innocent
reference Rhodes made to her favorite movie, and that phony "quote" was what
the press repeated.

Please do not pretend otherwise; the facts are not on your side.

--
"I am afeard there are few die well that die in a battle; for how can they
charitably dispose of anything when blood is their argument? Now, if these
men do not die well, it will be a black matter for the King that led them

to it; who to disobey were against all proportion of subjection." - W.S.

# 1230. JFK assassination: New audio!

Newsgroup: rec.radio.broadcasting
Date: 2004-05-21 15:54:36 UTC
From: brad.johnson@turner.com
Message-ID: <c8l8ns$ja4$1@xuxa.iecc.com>
Source record: 5170

This is a direct appeal!

If you rolled tape -- or know of anyone else who rolled tape -- on any TV broadcast that aired during live coverage of the assassination of President John F. Kennedy between November 22nd and the 25th, 1963, please contact me!

I'm interested in any reel-to-reel audio tape that recorded sound from any television broadcast during that weekend in November 1963!

Whether it's a network or local television broadcast, whether the sound recording of that broadcast is of good quality or poor quality, whether the audio is distorted, whether it was recorded in a major market or in a minor market, I want to know about it!

It could be audio tape that your parent or grandparent might have rolled using their old reel-to-reel tape recorder on Friday, November 22, 1963 (or later that weekend). Perhaps you vaguely remember a friend or acquaintance mentioning that they rolled tape on TV broadcasts that weekend. Or you think you know of someone who acquired such a recording.

I'm a collector, so if you have anything like this or know of someone else who does... please email me or have them email me at:

brad.johnson@turner.com
or bkj333@aol.com

P.S. Hey, we don't have to limit this to just TV... I don't rule out radio broadcasts but am interested in those too!

Thank you!

## 1231. Is LPFM dead?

I was trying to reach FCC regarding next filing window, but was not reach anyone in the appropriate department. I got an automated reply on my email saying that someone will get back to me within 20 days. Alas, it's been couple of months already and I do not keep my hopes high.

All searches on the web return posts pointing to the previous filing windows, which was nearly two years ago. Since all the windows are less then a week each and are announced about a month in advance (with couple of years pauses), does it mean the Government just want it to die quietly?

Any light shed on the issue will be highly appreciated.

Thanks.

# 1232. Is there ANY AM stereo in the US? (was: Re: WJR no longer in stereo)

Newsgroup: rec.radio.broadcasting

Does ANY station in the US broadcast in stereo anymore?
More specifically, any 50kw stations or at least something I can pick
up in the US midwest at night? I purchased an AM stereo campatible
tuner about three months ago and have never even seen a hint of stereo
on the AM band.

The FCC is still haggling with the MX applications (where competing apps have been filed in the same city for the same frequency) and is taking their sweet-assed time with those.

We were supposed to get five windows of 100 watt stations, followed by five windows for 10 watt stations. It's been several years and we're not through the first five yet, even though the last filing period was months and months ago.

A friend said you'll never see LPFM fully implemented under Powell's watch -- he has too many big radio corporate interests and is in bed with the NAB. Notice how IBOC got shoved down everyone's throats with lightning speed, yet LPFM just drags on and on and on ...

IMHO, get the current Bozos out of the White House, then push for an LPFM friendly FCC appointment from John Kerry.

Oh, you mean the ancient stuff that Fox News reported was stored improperly,
so it was useless?

<http://www.foxnews.com/story/0,2933,120137,00.html>

I would hardly call that "mustard gas".

Just like that "sarin" shell the Republicans were making such a big deal over
this week has turned out to be an old shell from which the sarin had long
since been removed during the inspection regime, and which had only the
smallest trace amounts left clinging to the insides of the container.

--
"I am afeard there are few die well that die in a battle; for how can they
charitably dispose of anything when blood is their argument? Now, if these
men do not die well, it will be a black matter for the King that led them
to it; who to disobey were against all proportion of subjection." - W.S.

# 1240. Amateur Radio Newsline™ Report 1397 – May 21, 2004

Newsgroup: rec.radio.broadcasting
Date: 2004-05-23 02:41:08 UTC
From: radionews@aol.com
Message-ID: <c8p304$b0p$1@xuxa.iecc.com>

Amateur Radio Newsline™ Report 1397 – May 21, 2004

Amateur Radio Newsline report number 1397 with a release date of Friday, May 21, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Mr. Haynie goes to Washington D C and Dayton, Ohio comes alive with the sound of ham radio. These stories and more on Amateur Radio Newsline report number 1397 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIGHT: MR. HAYNIE TO MEET WITH WHITE HOUSE TELECOM ADVISORS

This weeks top story starts in Dayton Ohio and ends in Washington D-C. It was at the Dayton Hamvention that ARRL President Jim Haynie, W5JBP, announced that he would be meeting with presidential advisors art the White House Telecommunications Office to discuss the Broadband Over Powerline situation. Amateur Radio Newsline was there when a horse but upbeat W5JBP thanked the ham radio community for making the meeting come about:

--

Haynie: “When we ran the story about my FAX’ing the President of the United States a powerful letter, what you helped me do with your letters and your e-mails was to get me an appointment Thursday morning, 10 a.m. in Washington. So you helped me to do that. (applause).

--

The meeting between President Haynie and those advising Peresident Bush on telecommunicastions matters was scheduled for Thursday, May 20th. We will have a full report on it, next week. (ARNewsline(tm))

**

THE BPL FIGHT: HAM TURNS THE TABLE ON BPL PROPVIDER

Still with BPL news, word that a ham attending an industry sponsored demonstration of the technology in Australia came prepared to do battle. From Brisbane, Q-News reports:

--

A presentation was given by Piero Peroni, who is the Business Manager for the BPL trial within Aurora Energy and Adrian Wild who is the Corporate Affairs

Manager within Aurora Energy.

Martin, VK7GN gave an audible demonstration of the interference on his portable HF receiver and I think it would be fair to say by all accounts the Corporate Affairs Manager was quietly horrified at the noise!

--

Whether or not the ham radio counter demonstration to Aurora Energy will slow down or stop the rollout of BPL down-under is, at this time unknown. (Q-News)

**

DAYTON HAMVENTION NEWS: A BIG SUCCESS

Back here in the U-S-A, Jim Haynie’s White House meeting announcement was just another layer of frosting on the very sweet ham radio cake known as the Dayton Hamvention. By all accounts, Hamvention 2004 was as good as any of those in the past and maybe better than some. Amateur Radio Newsline’s Mark Abramovich, NT3V, takes us on an audio tour of this years show:

--
The big buzz at Dayton was the introduction of two new, top-of-the-line HF radios.

Yaesu introduced thousands of visitors to its booth here to the FT DX 9000 - a radio the company has been developing four years. Here's Chip Margelli K7JA of Yaesu - Vertex Standard.

Over at the competition, Icom introduced showgoers to its sleek, new IC7800. It's already been out for more than a month and Icom representatives concede they underestimated the market demand for this high-end radio.

Here's Ron Rotino, W9WL, represting Icom.

In other Dayton news, Alinco announced a new distributor relationship. Evelyn Garrison WS7A tells Amateur Radio Newsline about the new partnership.

Now Amateur Radio Newsline Editor Bill Pasternak WA6ITF also took in the show besides running his annual Town Hall forum. Bill couldn't help himself when he stopped a the U.S. Towers booth where two lovely sales, eh, models were posing for pictures. Here's the exchange between our own California guy and some young ladies who came to the Dayton Hamvention for the first time..

Behind any Dayton Hamvention is the general chairman. This year Gary De Combes N8EMO took on that enormous responsibility. At the close of the show, he summed it all up for Amateur Radio Newsline.
And how did one of the big radio manufacturers we didn't mention yet think things went. Kenwood's Leo Famie was pleased with this year's event…

And, of course, Chip Margelli, summed up what Yaesu Vertex Standard thought.

Finally, there were lots of new friends and acquaintances made during the Dayton Hamvention 2004. And, despite the rain, spirits of those scouring the flea market for goodies weren't dampened.

It was one for the record books, too, in terms of participation.

Hope to see you here, next year.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, from the convention floor at the Hara Arena - home of the Dayton Hamvention.

--

As of the time this report is being prepared the Hamvention Committee has not announced a final attendance figure, but several vendors told Amateur Radio Newsline that their sales were way up over the past few years. And thats good news for both the United States economic recovery as well as for Amateur Radio. (ARNewsline(tm))

**

DAYTON HAMVENTION NEWS: N8EMO AND WX8F ASKED TO RUN HAMVENTION 2005

In a related development, on Monday night, May 17th the Dayton Amateur Radio Association’s Planning Council unanimously recommended the clubs Board of Directors reappoint Gary De Combes, N8EMO and Jim Nies, WX8F as General Chairman and Assistant General Chairman respectively, for Hamvention 2005. The two were affirmed to lead the 2005 show on Tuesday night the 18th. That's only two days after the close of this years show. Normally , no action is taken to fill these positions until the June Board of Directors meeting.

More on the 2004 Dayton Hamvention in future Amateur Radio Newsline reports. (ARNewsline(tm))

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the K9OQO repeater serving Appleton Wisconsin.

(5 sec pause here)

**

RESCUE RADIO: HAMS TAKE PART IN SIMULATED AIRPORT DISASTER

Over a hundred ham radio operators from seven counties in two Eastern states, provided emergency communications support for the Saturday, May 8th disaster drill at Dulles International Airport. The exercise consisted of a simulated plane crash and fire. The aim of the session was to provide treatment and transport of 200 volunteer "victims" to area hospitals by helicopter, ambulance and bus. Bill Pasternak, WA6ITF, picks up the story from here:

--

Larry Hughs, K3HE, is the Public Information Officer for for the ARRL’s Virginia Section. He tells Newsline that the job of Amateur Radio was to provide communications between agencies at the simulated crash site, those providing patient transportation, and the participating hospitals. To

accomplish this, hams from a number of the regions Amateur Radio Emergency Service groups set up several portable repeaters in and around the airport grounds. They also provided a live Amateur Television link between the site and the airport Operations Center. This allowed airport management to monitor the progress of the drill.

Hams also accompanied some of the officials at the simulated crash site to provide instant communications to other temporary operational areas. Others rode the buses that transported ambulatory victims to local hospitals. This gave planners voice communications and real-time position data via Automatic Position Reporting System. Meantime, other radio amateurs were stationed at ten area hospitals. They helped to coordinate the arrival and departure of those simulating the victims of the crash.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, reporting.

--

Dulles International Airport is in Northern Virginia, near Washington, DC.. Its also not that far from where Al Quida terrorists crashed a jumbo jet into the Pentagon building on September 11th of 2001. Back then ham radio was among the first of the “First Responders” on scene and is credited in helping to save numerous lives. (K3HE, ARNewsline(tm))

RESCUE RADIO: SUIT BLAMES MOTOROLA HT’S IN 911 DEATHS

The families of twelve firefighters killed when the World Trade Center in New York City collapsed on 9-11 have sued the manufacturer of the hand held radios the men were carrying. According to Popular Communications magazine, the five billion dollar action against Motorola and the City of New York claims that Motorola failed to warn the Fire Department that its hand-helds could not transmit or receive in a high rise building. Because of this, the plaintiffs contend that firefighters could not hear an order to evacuate. (Popular Communications)

ENFORCEMENT: NC HAM MAY FACE LICENSE RENEWAL HEARING

A North Carolina ham who allegedly interfered with repeater operation in that area may not get his license renewed. This, as FCC chief rules enforcer Riley Hollingsworth writes to Daniel Barrett, KE4NOK of Kings Mountain to tell him that his application to renew his ticket has been referred to the enforcement arm of the agency by the Wireless Telecommunications Bureau.

According to Hollingsworth’s letter, the action was based on information coming to the Commission's attention that Barrett is alleged to have used his station to interfere with various repeater operations on 145.350, 145.450 and 147.120 MHz and that he ignored requests of repeater control operators to refrain from using their repeaters. Hollingsworth’s note also says that Barrett ignored the Commission Warning letter dated December 24th of 2003 regarding use of and interference to the repeaters and that apparently

Barrett’s use of, and interference to, these repeaters continues.

Hollingsworth’s letter tells Barrett that his renewal application will not be routinely granted. Rather, that the Commission may need additional information from KE4NOK in order to determine his qualifications to remain a Commission license. The letter also tells Barrett that it may be necessary to designate his application for an evidentiary hearing before an Administrative Law Judge. In such a proceeding Barrett would be required to appear at a hearing in Washington, DC. (FCC)

**

ENFORCEMENT: UNLICENSED BROADCASTER CHALLENGES FCC’s AUTHORITY

An unlicensed radio station taken off the air by the FCC last fall has challenged the regulatory agency in federal court. Attorney Mark Vermeulen, representing San Francisco Liberation Radio, says that the seizure of the station's equipment in an October 2003 raid came without proper notice and violated Constitutional protections of due process and the First Amendment.

In an appearance before U.S. District Judge Susan Illston, Vermeulen argued that -- quote -- "It's a bedrock principle that parties have a right to pre-seizure notice and a right to be heard.

But government attorney Sarah Winslow disagreed with Vermeulen's free speech arguments. She told Judge Illston that there is no First Amendment right to broadcast without a license from the FCC.

The FCC had monitored San Francisco Liberation Radio for years. They eventually tracked the station to a laundry room basement in the San Francisco home of James and Charlotte Hatch. The Hatches never made a secret of their operations. They also claim that they had unsuccessfully sought an FCC license to operate legally. (Published reports)

**

FOR THE BIRDS: FCC RETAINS BIOLOGICAL CONSULTANT

Remember all those stories about thousands of migratory birds getting killed by running into radio towers? Well the FCC has now retained the services of Avatar Environmental Services of West Chester, Pennsylvania as a biological consultant. This, to assist in fulfilling the FCC's role under the National Environmental Policy Act and other federal environmental statutes.

The CGC Communicator reports that Avatar will give the Commission access to the services of experts with training and experience in evaluating the impact of construction projects on animal and plant species.

According to CGC, Avatar has performed similar services for other agencies. The possible impact of communications towers on migratory birds is one of the immediate pressing issues. (CGC)

**

RADIO CELEBRATIONS: W6RO AT AGE 25

A big celebration out West in the world of Amateur Radio. This as the Queen Mary Ocean liner ham radio station W6RO turned 25 on April 29th.

W6RO is actually the club call sign of the Associated Radio Amateurs of Long Beach, California. Long Beach is where the retired ocean voyager is permanently birthed and open to the public as a tourist attraction. The club operates the W6RO station which is located in the Wireless Room adjoining the ships historic radio museum.

In its two and a half decades of operation, visiting hams from around the world have called C-Q and made numerous contacts using its gear, and its well known call sign phonetics of W-6-Rolling Ocean. (W6RO)

**

HAM RADIO BOOKS: NEW VHF PROPAGATION BOOK FROM CQ

CQ Communications has announced the publication of a new resource book for hams active on VHF and UHF bands. Its a book for those who want to learn more about long-distance propagation possibilities available to them.

Titled "VHF Propagation - A Practical Guide for Radio Amateurs" the book examine each of the most common long-distance propagation "modes" found on these bands. Topics covered include tropospheric scatter and ducting, Sporadic-E, Aurora, 6-meters and the F-layer, transequatorial and more. The book then explains how each mode occurs and offer tips on making the most of these band openings.

"VHF Propagation - A Practical Guide for Radio Amateurs" was written by Ken Neubeck, WB2AMU, and Gordon West, WB6NOA. It is available from many ham radio dealers or direct from CQ anytime through the CQ online bookstore. To find it take your web browser to www.cq-amateur-radio.com and then click on “Visit the CQ Store." (CQ)

**

THE SOCIAL CIRCUIT: ROCHESTER HAMFEST IN JUNE

With the 2004 Dayton Hamvention now a part of history, we turn to the ham radio social circuit for the rest of 2004. Next up is the giant Rochester Hamfest the weekend of June 4th through the 6th. As usual, it takes place at the Monroe County Fairgrounds and is combined with the ARRL Atlantic Division Convention.

Chairman Harold Smith, K2HC, tells Newsline that this years outing features over 100 inside exhibitors, 1200 flea market spaces and that very much coveted on site free parking. He also says that area hotels can be found for $69 a nmight or less.

Interested in finding out more? You can do it right on-line at www.rochesterhamfest.org or by calling the hamfest office at 584-424-7184 during business hours Eastern Daylight Time. (Rochester Hamfest)

RADIO HONORS: HAM HONORED FOR SERVICE IN IRAQ

The United States Department of Commerce has honored Fredrick Matos, W3ICM, of Annapolis, Maryland. This by presenting him with its Gold Medal Award for Distinguished Achievement.

The ARRL Letter says that Matos is an employee of the National Telecommunications and Information Administration. He was given the honor for his work to help establish telecommunications in Iraq, where he was deployed for nine months.

While in Iraq, Matos who also holds the Iraqi call YI3DX helped establish a central telecommunications authority along with assigning frequencies to local law enforcement groups. He was also responsible for issuing YI Amateur Radio licenses to both nationals and visitors.

In presenting the award April 13, Commerce Secretary Donald L. Evans welcomed Matos home and thanked him for his role in "expanding freedom around the world." (ARRL, Daily DX)

EMERGING TECHNOLOGY: BEWARE OF FOREIGN PET CHIPS

Heres a communications story of a different sort, but one that affects anyone with a four legged friend around the house. The United States Humane Society and other animal care organizations are cautioning pet owners that the nation's animal shelters may not have the proper scanning devices to detect and read some foreign manufactured pet identification microchip.

The warning comes as a European company has entered the microchip market and is selling its microchips in approximately 440 veterinary clinics housed in one of the nation's largest pet product retailers. But the company has not yet provided many of the nation's shelters, humane societies and veterinary hospitals with compatible scanners needed to read all the microchips currently in pets. As a result, the animal protection groups recommend that pet owners thinking about getting their pets micro-chipped contact both the chip manufacturer and their local shelter. This, to make certain that compatible 125 kHz scanners are present in their community. (Science OnLine)

**

WORLDBEAT - INDIA: FREE FOR ALL

On the international scene, Amateur Radio training classes have just started at the National Institute of Amateur Radio in India and there is a very pleasant twist. According to Administration Manager Jose Jacob, VU2JOS, the course is

available free of charge to anyone in that nation who is age 12 or older. (Q-News)

**

WORLDBEAT - UK: NEW BARTG AWARDS MANAGER NAMED

Over in the U-K the British Amateur Radio Teledata Group has a new Awards Manager. This, as the group announces that Phil Cooper, GU0SUP, has taken over from Nigel Roberets, G4KZZ, in that post. Cooper will handle all awards, including the well-known Quarter-Century Award. For more information e-mail awards@bartg.demon.co.uk (RSGB)

**

WORLDBEAT - SPAIN: A WEDDING OPERATION

Spanish special event station A00FL will be on the air between the 21st and 30th of May. This, to celebrate the wedding of Prince Felipe and Do&#65533;a Letizia Ortiz. If you work this one, QSL as directed on the air. (Q-News)

**

ON THE AIR OPERATIONS: THE MORRIS CANAL SPECIAL

Closer to home, July 10th and 11th are the dates when New Jersey’s Nutley Amateur Radio Society activates station W2GLQ. This, for the first ever Historic Morris Canal Special Event.

Stations will operate from various locations along the 109 miles route of he canal from 1300 to 2200 U-T-C. Operations will continue thru 2005.

More information is on the Nutley Amateur Radio Society website. Its in cyberspace at at www.hometown.aol.com/kc2aup (Press release)

**

DX

In D-X, kook for K9OT and KB9LIE to be active portable F P from Miquelon from the evening of July 2nd until noon local July 11th. This is a 100 watt operation on 160 through 6 meters from the
ham radio friendly Maxotel Hotel. They will also have a 6 meter breakable beacon on 50.120 Mhz. Emphasis will be on 6, 12 and 17 meters SSB for Peg and 160 through 30 meters CW for Paul. QSL via K9OT direct with SASE or bureau. Sorry, no electronic Q-S-L are available for this one. (Various DX sources)

**

THAT FINAL ITEM: UP - UP - AND AWAY

And finally this week, we go back to the Dayton Hamvention where Amateur Radio Newsline ran into one of the nations best known experts in Amateur Radio balloon launches. And does Bill Brown, WB8ELK have a story about recruiting new young hams using high altitude ham radio carrying balloons. Amateur Radio

Newsline’s David Black, KB4KCH, has the details:

--

Bill Brown's class is all about going up up and away--and getting college credit at the same time. Brown teaches a course on building balloon payloads at the University of Alabama in Huntsville--and he makes amateur radio a big part of the curriculum.

--

Audio only: Hear it at www.arnewsline.org

--

The ham bands get used not just by the students--but by what goes up. Amateur radio experiments are aboard the payloads students assemble.

--

Audio only: Hear it at www.arnewsline.org

--

Brown's class is also creating a positive effect on amateur radio—by helping bring new people into the service:

--

Audio only: Hear it at www.arnewsline.org

--

About five students become licensed each semester. From the South - East bureau in Birmingham Alabama, I'm David Black , KB4KCH, for the Amateur Radio Newsline.

--

Again that website for more information on this very interesting project is www.WB8ELK.com (ARNewsline)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award is now on. This program is open to any FCC licensed

young radio amateur age 18 or younger residing in the contiguous 48 states and who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That’s in cyberspace at www.arnewsline.org. The cutoff for nominations this year is midnight on Tuesday, June 31st.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Don Wilbanks, AE5DW, saying 73 and we thank you for listening."

This weeks newscast was recorded in part at the 2004 Dayton Hamvention and at our studios in New Orleans, Louisiana. Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

For a comphrehensive worldwide list of AM Stereo stations, visit The
Official AM Stereo Web Site:

http://AMStereo.s5.com

In the Midwest at night, try 760 WJR from Detroit and 890 WLS from
Chicago -- both 50,000-watt AM Stereo stations with nighttime coverage
that extends for hundreds of miles. (Yes, despite the ill-named
thread here, WJR continues to broadcast in full AM Stereo to this day,
as do hundreds of other stations around the world.)

p.s. If your receiver has never triggered into Stereo mode on the AM
band, are you sure it truly has AM Stereo capability? More than a few
people have been fooled by ambiguously-labeled "FM/AM Stereo"
receivers which are actually only Stereo on the FM band. Check the
receiver list on the aforementioned web site to make sure yours is
listed.

# 1244. High school radio stations alive and well

Newsgroup: rec.radio.broadcasting
Date: 2004-05-23 02:41:39 UTC

By David Porter, Associated Press Writer
May 21, 2004

FLEMINGTON, N.J. -- Even with CD players and iPods, America's teens still listen to the radio. And they tune in even more when the DJs are their own age.

Their unwavering devotion has meant that high school radio has managed to survive -- even thrive at the margins at the low end of the FM dial.

In New Jersey, high school radio epitomizes what is characteristic nationwide. WCVH, out of Hunterdon Central High School, celebrated its 30th anniversary last month. WJSV, based at Morristown High, has been broadcasting since 1971, and West Windsor-Plainsboro High's WWPH has been on the air 28 years. Other stations operate out of Atlantic City, Piscataway and Brick high schools.

At 78 watts, WCVH can be heard as far as 20 miles from the school. The student-run shows are done in two-hour shifts, with three DJs on each shift. The banter can get silly but stays safely within the boundaries of good taste.

"They have to keep it clean," said David Kelber, WCVH's faculty adviser since 1975. "They have limited free rein."

David Connolly, who does an afternoon show with classmates Jacob Lewandowski and China Ejim called Random Nation, gets to play his favorite music while learning about the radio business.
"We have an order to the show, but as far as the music goes, it's kind of skewed," Connolly said.

There are about 300 high school stations nationwide, said Fritz Kass, chief operating officer of the New Windsor, N.Y.-based Intercollegiate Broadcasting System, an organization that serves mainly college stations. There are about 2,400 stations classified as educational by the Federal Communications Commission.

There is no national organization specifically for high school stations, and the FCC does not maintain statistics on them. But Kass said high school stations have made up most of the growth in his organization's membership in the last few years.

Kelber has overseen the growth of WCVH from a one-room operation manned by six or seven students to one that features radio and television studios with state-of-the-art equipment used by about 100 students. He and engineer John Anastasio designed and built most of the furnishings themselves.

In the early days, students broadcast live from 6 a.m. to 11 p.m. weekdays, with some taped programs in the afternoon. Today, students broadcast from 3 p.m. to 9 p.m. Monday through Thursday and 3 p.m. to 5 p.m. Friday. The rest of the time, the station offers computer-programmed music and taped public-interest programming.

Wayne Cabot, an afternoon newscaster on New York's WCBS AM, cut his teeth in radio at WCVH while a student at nearby Voorhees High in the early 1980s and remembers "spending every spare minute" at the station.

"We had a lot of fun, but it was a great place to learn," he said. "You learned everything about programming formats, engineering, what rules you had to follow to keep your license."

Federal legislation passed in the 1960s set aside the frequencies between 88.1 and 91.9 for non-commercial stations of 100 watts or less. Those airwaves have become increasingly crowded in New Jersey, which has more than 130 AM and FM stations, according to FCC statistics. The Hunterdon Central and Morristown stations use the same 90.5 FM frequency, as do WBJB in Lincroft and WXGN in Egg Harbor Township.

Even well established high school stations operate largely at the mercy of the larger outlets. FCC rules require smaller stations, categorized as Class A, to make way on the FM band for larger stations in Classes B, C and D if conflicts arise.

For example, when Radio One, the country's seventh-largest radio conglomerate, bought 107.7 WSNJ in the Philadelphia area, it moved the location of its tower and also moved the station's frequency to 107.9 to fit into the Philadelphia market.

That amounts to a death sentence for WWHS, which has broadcast on 107.9 from Haverford High School since 1949 and is considered the longest-running high school station in the country. The station is expected to go off the air before the end of the year, a Radio One spokeswoman said.

One solution would be to stream audio over the Internet, an experiment WCVH tried two years ago but later abandoned. Kelber and Anastasio cited the cost involved, on top of what the station already pays to music licensing agencies ASCAP and BMI.

"We don't compete with the commercial stations," Kelber said. "We're not in the business of making money or for ratings. But we do care about service to the community."

# 1245. Re: Are radio sales jobs all commission?

Newsgroup: rec.radio.broadcasting
Date: 2004-05-23 03:12:33 UTC
From: Bob Haberkost <cbclistener-really!-@canada.com>
Message-ID: <c8p4r1$lrs$1@xuxa.iecc.com>
Source record: 5185

Actually, the arrangement I saw most often was what is/was called "draw".
You get a salary...not exactly riches beyond the world, but enough to keep
you out of poverty, against which the commission on your sales are "drawn".
Obviously, if you don't earn your keep, this arrangement won't last, but on
the other hand if you do well your salary plus commission is, in fact,
straight commission. Also, once you do prove yourself, you can take a bad
week or two and not go completely broke....although I don't know what
mechanism is used to make sure that the result after a run of bad weeks
doesn't have an incentive to slack off regularly.

This arrangment also conforms with the US Department of Labor's minimum wage
and overtime regulations. You can't make an employee adhere to a schedule,
fix hours, require presence at a work location, etc, without paying him/her
at least minimum wage and overtime, if it applies. But an A/E who gets two
$10,000 signatures a week is making about $100K/yr, enough that he/she is
making well above minimum wage all day and night, with overtime to boot.
--
---------------------------------------------------------------------------
There must be the appearance of lawfulness....especially when it's being broken.

The Boston Globe picked up this story last week. Quite interesting, with unfortunately one glaring error:

>FCC rules require smaller stations, categorized as Class A, to make way on the FM band for larger stations in Classes B, C and D if conflicts arise.<

It's Class D stations that are the secondary service in the commercial (non-reserved) portion of the FM band.

For sale:

(The "Radio Crazy" is baaaaakkkk!!!!)

Partial interest in AM station in small West Virginia
town. Non-directional daytimer, 1 KW with SOME night
power. All real estate included. Total asking price is
only $150,000 including the huge 350 ft.
self-supporting tower. Low dial spot below 1 MHz.

Joint venture. (If you venture out, you go to the
joint! Hi!)Active or inactive investors with at least
$10,000 each are welcome. Don't even THINK about
buying controlling interest. Even I am forbidden that!

There is an element of risk and you could lose all or
part of your investment (Standard required legal
disclaimer. I do not fly to Rio until we have your
dough! Hi!)

References:

a)My parole officer....Mr. Larson E. Rapp, c/o Zing
Zing prison, Ossingstink, NY 12345.

b)Trade reference...Purchased a one-way ticket using
unmarked cash from Brazilian Bandit Airways, Oshkosh,
WI. Destination: Rio in Brazil. Those in the know will
see the connection to Oshkosh.

Tel: (478)741-1710 in Macon, GA

Only those fully identifying themselves will be given
callsign and city of license.

73,

Meyer Gottesman, W6GIV
aka Moron Gottesman
aka Maven Gottesman
aka The "Radio Crazy"

PS The references are in fun, but the deal is very real!

What about company benefits such as a health care plan? Do new
salespeople at a station automatically get health care coverage? And
if they do, would this apply to all salespeople or just full-time
ones?

Wow....good questions. I should think that, for those operations with a salary/draw
arrangement, health benefits would kick in in accordance with established policies
for the station (for example, newly-hired secretarial has a 90 day wait, so so does
the new A/E). But on this I'm sure there's wide variation, including where the
eligible A/E has to pay into the group plan.

I just heard Franken talking about the latest Arbitrends a little while ago. If I heard him right, he said that WLIB got a bigger share than WABC in both the 18-24 and 25-34 demos during the midday daypart.

This would mean that Franken, on the puny WLIB, beat Rush, on the powerhouse WABC, in two desirable demographics.

Does anyone have the details? I can't find any press confirmation or refutation anywhere I have looked.

Thanks.

It seems that only some of the murders here had anything to do with
the fact that the victim was a dj. A spousal murder/suicice, a couple
that seem to be random violence, a shoot-out with the law...none of
those have anything to do with the profession of the victim.

When you're a public figure, you attract nutcases.

Since Mr. Porter appears to be a staff writer and not a broadcaster I
wonder where he got his information. I've been in the business a very
long time and have never seen a high school station considered
competition even by other non-commercial stations.

It sounds like a puff piece.

Franken was the keynote speaker at this weekend's Talkers New Media Seminar in New York. He made that claim there but clearly didn't understand what the numbers meant.

I can believe it might be true due to all the external publicity. It's not the book. It's the first 3 month average.

Frankenly, I hope he's right. He was very open about the troubles the network is having and made some very funny remarks about the quality of its series of managers.

>This would mean that Franken, on the puny WLIB, beat Rush, on the
>powerhouse WABC, in two desirable demographics.

The differences he quoted were well within statistical error. We need to find someone on the list with access to Maximiser with the New York figures.

No, it's OK for them because they don't brand themselves with the doctorate, thereby claiming professional expertise that only a tiny fraction of the audience would know was in an unrelated field.

Jerome

Agree to puff n stuff - but - in some cases High School stations are it in a given geographic area. When KLME 88.1 Battle Mountain Nevada at 10 watts first came on line in about 1976, that was it for FM Stereo radio, actually FM anything.

The high school kids loved being DJ's and playing their music. True - I forced elevator music from 8 AM till 3 PM, but then the kids were it till 11 PM when I went underground for me and a few others :-)

Took "student DJ's" to SF to take their 3rd class license exams - most of them passed :-)

The idea here I think is an alternative to commercial or even non-commercial and a way for "students" to be involved as broadcasters.

Wish more high schools could or would do same, but that was long ago and far away

And by the way as best as I can tell today, KLME 88.1 FM Battle Mountain is now defunct - oh well

@xuxa.iecc.com:

> I can believe it might be true due to all the external publicity. It's
> not the book. It's the first 3 month average.

Actually, after discussion with others elsewhere who DO have access to Maximizer, it looks as though the numbers Franken saw (and happily admitted he doesn't really understand) were the raw share numbers just for April.

This three-month rolling trend comparison for the midday daypart (the last two hours of Unfiltered and all of O'Franken Factor vs. the last two hours of John Gambling and all of Rush Limbaugh) is very interesting.

10AM-3PM MON-FRI, PERSONS 25-54

F M A
WABC 2.5 2.2 2.6
WLIB 1.0 1.5 2.2

These are "trend" numbers, meaning that the April raw share number would actually be higher for both stations -- as I understand it, the previous two months' listenership is factored into the April number as presented.

Given the huge leap that the April number represents for WLIB, it's possible that the raw listener share for WLIB in April actually WAS slightly higher than for WABC -- in other words, out of the box, Franken may have beaten (or at least tied) Rush in the #1 U.S. radio market! I'm still digging to sort it out, as I don't have direct access to the raw information, either.

> Frankenly, I hope he's right.

Frankenly (did you mean to type that?), so do I. If it turns out he's wrong, I'm sure he'll feature that fact in an upcoming "Boring Corrections" segment.

Only time will tell whether Air America can sustain such remarkable performance on WLIB -- but even to move for one month into the ratings neighborhood of the WABC powerhouse is quite an accomplishment.

Tom> This would mean that Franken, on the puny WLIB, beat Rush, on the
Tom> powerhouse WABC, in two desirable demographics.

Al Franken said: WABC 3.2, WLIB 3.4 for his show in that group.
(That part includes the two hours preceeding Rush/Franken.)

Someone else has claimed that the latest "three-month rolling trend"
numbers for the mid-day 25-54 was: WABC 2.5-2.2-2.6 WLIB 1.0-1.5-2.2.
(Can anyone confirm those?)

In the New York Metro daypart, the Arbitron Winter 04 quarter has WABC
with a 3.7 and WLIB with a 1,3 share. WLIB ranked 24th in the 38
stations while WABC was tied for 7th place. The Spring 04 "P1" numbers
released on May 21 are similar: WABC 3.9, WOR 2.1, and WLIB 1.4.

In other news...On her show last Friday, Randi Rhodes announced that
she was quitting Air America, but apparently she was joking (or, at
least, not yet). Meanwhile, Real Networks wants to partner with the
Drobnys to acquire or invest in the network: they want to raise $8M
to pay off debts (eg. payrolls of terminated employees) and fund
ongoing operations. Air America (David Goodfriend) says that the
network will be announcing new affiliates in Los Angeles and Chicago.

I did the extraps using actuals from the Programmers Package in Maximiser
and X-trends to get the 25-54 April only for 10-3. WABC: 3.1 and WLIB: 3.4.

There is no 18-24 demo in a trend report.

# 1274. Inside Radio confirms it: Franken beat Rush in NYC

Newsgroup: rec.radio.broadcasting
Date: 2004-05-26 15:04:33 UTC
From: Tom Betz <spammers_lie@pobox.com>

>From <http://www.insideradio.com/>:

Al Franken has some New York numbers to crow about.

And he did crow about beating Rush with 25-54s -- as Air America flagship WLIB did an extrapolated 3.4 for the month of April compared to WABC's 3.1 in middays. Caution: Extrapolations are far from official. But the Phase I Arbitrends suggest there's both an audience out there, and possibly a younger audience for libtalk.

The extrapolated discreet month of April in 25-54 from 10 AM to 3 PM shows a
3.1 for WABC and 3.4 for WLIB.

# 1276. Kennedy Assassination: New Audio!

Newsgroup: rec.radio.broadcasting
Date: 2004-05-26 15:04:34 UTC
From: bkj333@aol.com
Message-ID: <c92bm2$8tf$1@xuxa.iecc.com>
Source record: 5116

First off, just want to say thanks... I've received a number of emails from collectors who have amateur recordings of one or even both of the two Kennedy assassinations, and I'm deeply grateful for all these responses! There are some great people out there, thank you!

An update. I am still looking for new audio concerning both assassinations...

So if you personally tape-recorded -- or know of anyone else who tape-recorded -- any television or radio broadcasts concerning one or both of the two Kennedy assassinations, please contact me!

I'm interested in any such recordings made during the JFK assassination in November 1963 and/or the RFK assassination in June 1968. Whether it's a network or local broadcast, whether the sound recording of that broadcast is of good quality or poor quality, whether the audio is distorted, whether it was recorded in a major market or in a minor market, I want to know about it!

It could be audio tape your dad rolled on using his old reel-to-reel tape recorder on Friday, November 22, 1963 (or perhaps later that same weekend). It could be a friend or acquaintance who mentioned to you that he recorded live coverage on June 5, 1968. It could be someone you know who acquired a recorded broadcast that someone else made.

I'm a collector, so if you have anything like this or know of someone else who does... please email me or have them email me at:

brad.johnson@turner.com
or bkj333@aol.com

Thank you so much!

A Phase I extrap is based on two exact months and one simple math
calculation. With the exception of book-to-book weighting differences, P1
extraps are very close to the 'real" numbers seen when he full book comes
out.

## 1278. WABC re-creates the past next Monday

Newsgroup: rec.radio.broadcasting
Date: 2004-05-26 22:46:36 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <c936oc$kk3$1@xuxa.iecc.com>
Source record: 5117
Cross-posted to: alt.culture.us.1960s,rec.music.rock-pop-r+b.1960s,rec.radio,rec.radio.broadcasting

New York's WABC-AM (770 kHz) will sound different next Monday, Memorial Day, between 6am and 6pm local time (1000-2200 UTC). The station will present its annual "Rewound" special, 12 complete hours of original programming from the 60's and 70's when WABC was America's, and the world's, number one Top 40 station. Everything will be played back just as it was, including the news and commercials.

Special guest for the day is Dan Ingram, one of the DJ's who helped create the special sound of "77". Between 6 and 8pm local time (2200-2400 UTC) he will join current WABC program director Phil Boyce to talk about the station's heritage and take phone calls.

The special programming has been put together by WABC personality Johnny Donovan, who stayed with the station after it switched to a talk format in 1982. The good news is that Donovan says he has enough material to present these specials for the next ten years, thanks to the help of aircheck collectors.

The first hour (1000-1100 UTC) will be a real treat for those who remember WNYW, Radio New York Worldwide. It's a show by Les Marshak from 1970. Marshak was the presenter of WNYW's Worldwide Hit Parade.

The WABC tribute site http://musicradio.computer.net/

> tuner about three months ago and have never even seen a hint of stereo
> on the AM band.

WWKB in Buffalo lights the stereo indicator on my Delco radio, but the programming seems to be in mono. They're pretty directional, so it's not likely you're gonna get them in the midwest. Only other one I know of is WILD, a daytimer in Boston. Supposedly, all the X-band (1610-1700) stations broadcast in stereo. My stereo radio doesn't tune that high.

That matches what Inside Radio reported today.

It will be interesting to see whether or not WLIB can hold on to this share
through June.

It will also be interesting to see how soon Clear Channel (whose Air America
affiliate KPOJ is reported to have quadrupled its share of the Portland OR
market in April) fires up its own liberal talk network on its underperforming
AM stations around the country; and whether this happens fast enough to put
Air America out of business before it can sign up more affiliates for itself.

Hi all,

I'm looking for actors to participate in a free study geared to increasing the number of acting/voice-over jobs you recieve through the use of my specialized goal and networking techniques.

There is absolute no cost to you and I will never ask for any fees of any kind.

I need some people to go through the program I have developed and give some critique and feedback. If you want to increase the number of call-backs you recieve and have 10 or 15 minutes a day to spend networking online with my study group, please send an email to focustec@pacbell.net for
all the details.

Thanks
Dan Thomson

Dr. Demento is as fictional a character as Captain Kangaroo. Radio does indeed entertain us with imaginary characters brandishing imaginary credentials. Invoking this fact is a rather weak defense of a radio performer who proclaims a real credential and addresses the issues of real callers. I trust that the production company for Marcus Welby, M.D., for example, had an orderly procedure for dealing with the medical questions they no doubt occasionally received. Perhaps a form letter advising professional medical attention, rather than Laura's approach of ridiculing the questioner on air.

In fact, I'm perfectly comfortable leaving the question of Laura's use of her degree to those who enforce the fraud statutes. I'm disputing your suggestion that a lower standard has been applied to Ann and Abby because they appear in print.

Jerome

>>

While Quacktor Laura was on KFI, before the Jacor buyout, that is, she used the degree (a real PhD in Psychology, not a PhD in an unrelated field as is hers) of another KFI host against her.

The Quacktor claimed to the relevant state licensure board that this other host should be sanctioned for practicing psychotherapy on the air.

(The fraud statues are not relevant here. The state's business and professions code is).

Ann Landers and Dear Abby never claimed to be psychologists. Laura did
in the early days. She doesn't need to, anymore, because she's now
turned into a theologian.

Her Ph.D in physiology has absolutely no relevance to anything she
does on the radio She's a proctologist in the company of brain
surgeons.

Since I like Franken more than Limbaugh, I hope the trend continues. I
can believe it's possible in New York because Limbaugh never had the
same relative success he's had in other markets. I always found that
to be strange because he never really had competition there. WOR was
sales driven with Arthur Schwartz (food) and The Dolans (finance)
against him.

In the middle of the April survey WOR changed the times of their
12-3pm shows. I think Dr. Joy Browne is likely to beat him up with
women and Franken, even if he doesn't keep his momentum, offers a
second threat to Limbaugh's exclusive grip on 12-3.

It looks as though an unusual number of diaries might have gone to NY
vs NJ counties.

Why? WABC is clear channel. Comes in very well here in Virginia, also
comes in well up in Boston. Occasionally subject to interference from
one of the Cuban stations but generally an easy catch on your car radio
on most of the east coast at night.

That would be nice for a nighttime program, but Rewound is running 6 AM to 8 PM...mostly under daytime conditions in the eastern US.

WABC comes in clear as a bell in the Montreal area. I used to listen to it often back in the Seventies when music still ruled AM. Today it's just another news/talk station littering the band.

Clear channel is great, though. Living in the Vancouver area back in the mid to late Sixties I used to pick up several eastern and east coast stations at night. Doesn't seem to work in reverse though :-(, I can't get anything past Minneapolis, Texas and Winnipeg. The good old days!

# 1306. Ads on Radio

Newsgroup: rec.radio.broadcasting
Date: 2004-05-29 00:18:42 UTC
From: OIE <beek@bbbbbb.com>
Message-ID: <c98kt2$fca$1@xuxa.iecc.com>
Source record: 5146

Why are all the ads that I hear for trash crap products? Weight loss junk, gold coin crap, how to be a millionaire foolishness, and on and on and on. There are very few radio ads that I hear advertising a quality product at a fair price, simply to gain marketshare. I would honestly be interested to hear about new products, or to hear specials from companies, to hear the latest deal or sale, or anything that's a real product, quality, no rip off, no placebo pill with a takeoff on the viagra name, no hair growth system with a guarantee to get "up to 100% of your money back" (whatever that means). The few decent ads are local. Does radio just not make the decent businessperson money anymore, so radio stations have to settle for the lowest common denominator? I'm honestly curious. You'd think there would be ads for the latest Nissan truck, or Wal-Mart national radio specials, something of that sort. Perhaps they exist, but I'm a radio junkie and all I hear is crap. Please respond. Thanks!

OIE

PS Sorry if this is a repost...after a day sent from my other news server, it still didn't propagate, so I sent it from another server.

# 1307. Amateur Radio Newsline™ Report 1398 May 28, 2004

Amateur Radio Newsline™ Report 1398 May 28, 2004

Amateur Radio Newsline report number 1398 with a release date of Friday, May 28, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio helps in the wake of an outbreak of tornadoes and a proposed California law could make operating a mobile station a driving distraction. Find out the details on Amateur Radio Newsline report number 1398 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: TORNADOES ACROSS THE MID-WEST BRING OUT HAM RADIO COMMUNICATORS

Dozens of tornadoes and severe storms hammered the northern Plains and Midwest in the past week. As phone lines went out and cellular systems got overloaded it was ham radio that was again called on to provide storm spotting and other communications. Amateur Radio Newsline's Don Wilbanks, AE5DW, is here with more:

--

More than a dozen tornadoes swept across southern Nebraska the weekend of May 22nd. According to news reports the tornadoes were part of three days of severe weather that knocked out telephone service and power to hundreds of thousands of people from Nebraska to Michigan to West Virginia.

Hardest hit was Hallam, Nebraska. Hallam is located 25 miles north to Lincoln and is where a 73 year old woman was killed from flying debris. Every building in Hallam was damaged or destroyed and all normal communications was cut off. This prompted the activation of local A-R-E-S units under the leadership of Section Emergency Coordinator Reynolds Davis, K-Zero-G-N-D.

In Lincoln, Joe Eisenberg, K-Zero-N-E-B, was active with the local ham radio Stormwatch. He described this as a terrible weather front and said that ham radio played a key role in the emergency:

--

Eisenberg: "We went out on Stormewatch early in the evening and had

spotters throughout the whole county and our spotters in the South part of the county began observing the extremely heavy rain, wind and hale, especially near the Hallem area. One of our spotters saw a semi that had been blown off the road."

--

Downed power lines and leaking propane tanks littered the Hallam, prompting the Nebraska National Guard to surround the community Sunday to keep people from entering. Newsline spoke to Sandy Ramsey of the Office of Emergency Management in Lincoln who had a lot of praise for the role that Amateur Radio is playing:

--

Ramsy: "The hams out there as storm spotters. They are just invaluable to us. They're our eyes and ears. We are in the
E-O-C
and they're our eyes in the field and we just couldn't do
this
without them. They are really an invaluable part of what we do."

--

But Nebraska was not the only place where hams were put on alert or activated. Iowa and central Michigan were also hard hit and the front also caused power and phone outages in southern Michigan, Wisconsin, northern Illinois and Iowa and northwest Ohio. On Monday night the 24th, Iowa was drenched by yet another wave of powerful thunderstorms, even as residents of the town of Independence waited for a flooded local stream to recede.

The wave of storms swept eastward early Tuesday. Illinois had high wind that damaged several structures near Jacksonville. State Police said a twister damaged a home south of Springfield.

And all across the region ham radio operators remained on alert. As we go to air their work is still ongoing and we will have more in future reports.

For the Amateur Radio Newsline, I'm Don Wilbanks, AE5DW in New Orleans.

--

A total of 81 tornadoes were confirmed to have touched down in the region on Saturday as a weather front stalled over the area. As we go to air, ham radio is still involved in the aftermath of the storms. (ARNewsline, K0NEB)

**

THE BPL FIGHT: MR. HAYNIE GOES TO WASHINGTON REDUX

ARRL President Jim Haynie, W5JBP, says his meeting with White House telecommunications advisors on B-P-L issues was both revealing and encouraging. Amateur Radio Newsline's Mark Abramowicz, NT3V, has the
latest:

--
Haynie says he and ARRL representatives met with Richard Russell, the White House associate director of technology in the Office of Science and Technology Policy in Washington D.C.

Haynie knew going in that the Bush administration's policy was clear: B-P-L is something that's good for America. But Haynie says Russell did offer assurances, especially in light of the interference findings about B-P-L contained in the National Telecommunications and Information Administration report.

"He did emphasize the fact that they would address the interference issues aggressively," Haynie says. "And I'm going to take him at his word at that. That they will do that.

"And I'm sure the FCC has taken note of the interference issues that NTIA has raised and as the representative for the amateur radio community, I intend to stay on top of it.

"We're not going to let this thing slide from that standpoint. They have the rules and they're printed and they're there. And we're going to make sure that they abide by those rules."

Haynie says it was clear from the start that Russell is beholden to the political agenda of the Bush administration.

"Mr. Russell heard what we had to say all right, but I think he was already predisposed to the fact that to anybody on the street - and I'm talking about the uninformed person that doesn't know about technology, broadband over powerline, where you can just plug your computer into the wall ,any wall outlet -does sound like a good thing," Haynie says. "And, I understand that.

"But on the other hand, there are issues that have to be dealt with and one of the examples I gave Mr. Russell was the fact that we could all lower our electric bills if we could burn high-sulfur coal.

"And he said, 'Well the EPA wouldn't let you do that.' I said, 'That's my point exactly. The FCC should be standing there, overseeing the rules about spectrum pollution.' I think I made my point."

Haynie says, upon reflection, one reality in the whole B-P-L debate is becoming crystal clear.

"I honestly do believe there's a disconnect between the engineers in the field, the engineers at the commission who actually understand the physics of the issue versus the politicians who are driving it," Haynie says. " I'm convinced now that's what it is. This is no longer

a science issue, an issue of facts, it's an issue of politics and that disappoints me."

However, Haynie says in recent weeks certain admissions by utilities trying to work with the amateur community are significant.

"In the beginning, everybody said from the industry side that there was no interference," Haynie says. "Now they're actually saying, 'Yes, there is and we'll try to mitigate it, we'll try to work with you.' That in itself is a big step."

Haynie says there also are admissions that one major interference solution touted by B-P-L proponents - notching - just doesn't do the job across the board.

"Finally some of the people are admitting, 'OK we don't have a point-source radiator anymore, we have a continuous-source radiator such as a power line.' And they're saying that the notching techniques will work and we've actually found out that they don't work that well," Haynie says.

"The notches are not that exact. And, when it says that they notch something about 3db or 6db, that's still not enough. It has to be notched by at least 30 in order to get back down to where the amateurs can function. And that's going to be a big challenge for the industry."

Haynie says anybody studying the issue of broadband technology sees the B-P-L investment is not a good one because of the growing emphasis on creating a wireless network.

"Quite frankly, in my personal opinion, the broadband over powerlines is going to be a real flash-in-the-pan because other technologies are going to overtake it very quickly," Haynie says.

"Whenever people say they want to plug their computer into any outlet in the wall, then my question is: 'Then, why do you have a cordless phone?' And WiFi and WiMax enter that challenge by being able to go anywhere in your house and let your laptop down whether it be on your couch or in your easychair and operate broadband.

"And I think that technology is going to be the real answer to people that need that type of high-speed internet access."

Haynie says the B-P-L battle is far from over. He says the strategy now is to press regulators - especially the FCC - to enforce the interference rules.

"Hold everybody's feet to the fire on the rules," Haynie says. "And the encouraging sign I've seen in the last week or so is the fact that more and more utilities have said that they didn't think it was a viable option for them and have opted out.

"Interestingly enough, the city of Manassas now is advertising for another provider. I found that extremely curious and very interesting."

Finally, Haynie concedes the ARRL has spent hundreds of thousands of dollars on the B-P-L issue and it's looking to the amateur community to get behind the league and its work.

"People are working overtime," Haynie says. "We are burning the candle at both ends and all I would ask is the amateurs support the organization and what we're trying to do in this effort."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

More on the fight to stop B-P-L in future Amateur Radio Newsline reports. (ARNewsline(tm), ARRL)

RADIO LAWS: CALIFORNIA TO FINE DISTRACTED DRIVERS

California drivers who are distracted for any reason and whose actions attract law enforcement may soon face fines by eating, combing their hair or talking on a cellular telephone. This if a bill passed on May 18th by the state senate and bend to the Assembly is eventually made law. Bill Pasternak, WA6ITF, has more in this report:

--

It was called S B 1800 when Senator Kevin Murray introduced it to the California State Senate back in February. It went unnoticed by the Amateur Radio community until about a week ago when the Senate passed it and delivered to the State Assembly for further action.
That's
when news outlets state wide ran banner headlines saying that the state legislature might make it a crime to be distracted in any way -- while operating a motor vehicle in the Golden state. And that is exactly what the measure would do.

As written, the Murray bill would make it an crime for a person to operate a vehicle in an unsafe manner that results from engaging in a distracting activity while driving. What is a distracting activity?

Well according to the Senator it is just about anything. Eating or drinking, smoking, reading or writing, interacting with children, animals, passengers, or objects in the vehicle, adjusting the controls of an audio or other entertainment device, or even talking on a hands free cellular telephone. And it is the last two items that could easily impact on ham radio operators or any other two way radio user that a police officer might regard as distracted just because he or she has a microphone in hand or is changing frequencies on a radio.

The bill does say that a law enforcement officer may not stop a vehicle when a driver is engaging in a distracting activity unless the officer observes that the vehicle is being operated in an unsafe manner. But it is left to the officer to decide what unsafe really is under other areas of California state law.

The proposed law does not single out or target Amateur Radio operators for enforcement, but it does not exempt hams either. In fact, the only exemptions are police, fire and emergency services but even this is limited. The measure states that an emergency service professional would be exempt from these restrictions when using a wireless telephone or other electronic device, but only as part of the course and scope of his or her duties.

What about penalties? The bill would require a first offense to be punished by a fine of $35, and a second or subsequent offense that occurs within 2 years of a prior conviction for the infraction to be punished by a fine of $150.

Also, being permitted to continue driving in California and get insurance means that you have to keep your violation points count low. Any person whose driving record shows a violation count of 4 or more points in 12 months, 6 or more points in 24 months, or 8 or more points in 36 months be presumed to be a negligent operator of a motor vehicle. This bill would prohibit a first-time violation from being given a point value, but would mandate that a 2nd or subsequent violation within 2 years to be given a value of one point. And even 2 points can cost a lot of dollars when you go to renew an auto insurance policy.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in
Los
Angeles.

--

Supporters of the proposed law cite studies blaming distractions for 25 to 30 percent of all vehicle crashes. Opponents say that the bill goes too far in meddling with the civil rights of individuals. This group vows a court fight if the measure gets signed into law. (ARNewsline(tm) from published news reports)

**

RESTRUCTURING: FCC CHAIRMAN SAYS RESTRUCTURING CONTINUING

FCC Chairman Michael Powell has told U-S representatives Greg Walden, W7EQI, and Mike Ross, WD5DVR, that the Commission will act 'as expeditiously as possible' on Amateur Radio restructuring. This, in response to a letter from Walden and Ross a month ago that urged the FCC to adopt the ARRL's restructuring Petition for Rule Making in its entirety along with rules changes needed to put it into place.

But in his response, Powell said the League's petition was one of many. There are 18 in all. An ARRL bulletin says that judging from the FCC Chairman's letter to Walden and Ross, it would appear as if
the regulatory agency plans to address all 18 petitions within the framework of a single rule making proceeding. (ARRL)

**

ENFORCEMENT: 75 METER IN INTERFERENCE BRINGS FAA REFERRAL

A California ham is under FCC scrutiny for alleged interference to ongoing Amateur Radio communications. The FCC's Daryl Duckworth, NN0W, is here with more:

--

Duckworth: "AE6QD, Steve L. Wingate, of Corte Madera, California, has
been sent a warning letter regarding malicious interference on 75 meters. This consists of jamming, making threats to other operators and to law enforcement officers, and broadcasts in which he appears incoherent."

--

The FCC warned Wingate that continued incidents of such interference will subject him to license suspension and revocation proceedings, as well as a possible fine of $7,500 to $10,000. And in an unusual twist, the FCC says that since Wingate also holds a pilot's license, this matter is also being referred to the Federal Aviation Administration as well. (FCC, RAIN)

**

ENFORCEMENT: FINES AFFIRMED AGAINST TWO ALLEGED PIRATES

Fines of $10,000 each have been affirmed by the FCC against Jason Green and Gary Feldman. The regulatory agency alleges that the two are pirate broadcasters in Florida who reportedly operated on 91.9 Mhz. The FCC says that neither filed a responses to the Commission's initial findings in the case. (FCC)

**

ENFORCEMENT: A "RADIO SUMMER CAMP" TO TRAIN MORE PIRATES

Now here's one that we know will interest the FCC enforcement folks.
Writers to the CGC Communicator report that budding radio pirates can learn how to buy or build FM transmitters and get on the air this summer. This at four-day "workshop" sessions, at least one of which will be bilingual.

Not only that. CGC readers also report that the event promoters will have transmitter and antenna kits available to attendees. For more on these strange educational check out www.freeradio.org. (CGC)

**

RADIO LAW: AIR FORCE JAMS GARAGE DOOR OPENERS

A new military radio system is jamming remote-control garage doors in communities near this Florida Panhandle base. During testing of the $5.5 million two-way radio system at Eglin Air Force Base, homeowners in Niceville, Valparaiso and the Crestview area reported that their garage door openers failed to work or went wild by themselves.

According to Air Force officials the contractor, Motorola Inc., will try to minimize the problem. Technicians will run the system on slightly different frequencies from those used by garage door openers when another test is conducted.

But an FCC spokesperson had some bas news for local homeowners. Lauren Van Wazer, said that if the Air Force has been running the system within its licensed frequencies then the users of garage door openers may have to change the operating frequencies of theirs.

By the way, the Navy says that a similar radio system has been requested for Pensacola Naval Air Station and other nearby installations. (Published reports)

**

NEW PRODUCTS: THE TNC WIZARD

Creative Services Software has announced the release of version 1.0 of the Kantronics and Timewave TNC Wizard. This program searches for your TNC and sound card on both serial ports and TCP/IP networks.

Creative's Rick Ruhl, W4PC, says that the TNC wizard works with built
in serial ports in the TNC, USB to serial adapters and TCP/IP to serial interfaces. It also has an option to detect the soundcard in the computer and add that information to the PacTerm or PkTerm startup files without any additional setup needed at install time.

The TNC Wizard requires Windows 98 or later, with TCP/IP installed. There is no cost for the TNC wizard and it can be downloaded from the CSS website at http://www.cssincorp.com (CSS)

**

NAMES IN THE NEWS: INDUCTEES NAMED TO THE CQ HALLS OF FAME

CQ Amateur Radio magazine has inducted fifteen people into its Amateur Radio Hall of Fame and two into the CQ Contest Hall of Fame.

Those elected to the CQ Amateur Radio Hall of Fame include Ned Carman, Ned, W0ZSW, and Sister Alverna O'Laughlin, WA0SGJ, who co founded the Handi-Ham System to aid the handicapped. Also inducted was Ten-Tec co-founder Jack Burchfield, Jack, K4JU. His partner Al Kahn, K4FW was made a member in 2002.

Others named include Bob Heil, K9EID, whose inventions revolutionized audio in rock music live performances and amateur radio and writer Tom Kneitel, K2AES and Amateur Radio Newsline's own Bill Pasternak,
WA6ITF. Bill as honored for his quarter of a century of producing these newscasts and for creating the "Amateur Radio Newsline Young Ham of the Year Award.

The new members of the CQ Contest Hall of Fame include Steve Bolia, N8BJQ. Steve is the longtime Director of the CQ World Wide W-P-X Contests and a pioneer in computer log-checking. Also inducted was Trey Garlough, N5KO. Garlough, who also holds the call sign HC8N is a world-class contester and the creator of two major contesting e-mail reflectors.

The CQ Amateur Radio Hall of Fame was established in January, 2001, to recognize those individuals, whether licensed radio amateurs or not, who significantly affected the course of amateur radio. The CQ Contest Hall of Fame was established in 1986 to recognize those amateurs who have made major contributions to contesting. The complete list of names is on line at www dot c q dash amateur radio dot com. (CQ)

CHANGING OF THE GUARD: ARNOLD O. BECKMAN • S.K.

Arnold Beckman, whose invention of a simple method to measure the acidity of California lemons spawned a scientific instrument empire has died at the age of 104. Beckman passed away on May 18th at Scripps Green Hospital in La Jolla, California, after a long illness.

Arnold O. Beckman was born in Cullom, Illinois, on April 10, 1900. In 1934 he invented the pH meter that is sill used use in citrus processing plants worldwide. The following year he founded National Technical Laboratories, and later renamed he company Beckman Instruments. Over the years, Beckman and his electronic test gear became synonymous with high quality and extreme accuracy. In 1997 the company was acquired Coulter Corporation of Miami, Florida which renamed it renamed Beckman Coulter later that same year.

Arnold Beckman, is survived by his son, Arnold Stone Beckman, daughter Patricia Beckman, two grandchildren and three great-grandchildren. His wife Mabel Meinzer Beckman died in 1989.

A complete biography of this inventor, businessman and philanthropist can be found on-line at
http://www.beckman.com/hr/memorial/mem_news.asp (Beckman-Coulter)

**

HAM RADIO IN SPACE: ASTRONAUT TRAINING TO BECOME HAM

The AMSAT News Service reports that Astronaut Leroy Chiao is scheduled to train at the Johnson Space Center in early June. This, to prepare for his Amateur Radio license exam. Once he passes the test and receives his call sign, he will be able to participate in the ARISS program during his stay as Expedition 10 commander on board the International Space Station. He is scheduled to fly this October. (ARISS)

**

WORLDBEAT - IRAN: IARU TRAINING PRESENTED

Turning to international news, word that the I-A-R-U recently presented an Amateur Radio Administration Course in Iran. Amateur Radio Newsline's Jim Meachen Zed-L-2-B-H-F in Auckland New Zealand
brings the details:

--

PKG HERE: In response to an invitation from the administration of the Islamic Republic of Iran, Fred Johnson ZL2AMJ representing the IARU Region 3 and Daniel Lamoureux VE2KA representing the IARU International Secretariat visited Iran to present a three-day Amateur Radio Administration Course, 26 to 28 April 2004. Fred Johnson ZL2AMJ takes up his story:

ZL2AMJ:

Since the early 1980s this course has been conducted by IARU in various forms in countries all over the world and in response to invitations from administrations to train regulators and prospective regulators in the administering of the amateur service and amateur satellite service. Related objectives include managing disaster

relief communications and organizing an amateur radio society.

Our recent course in Tehran was arranged by Mr T. Shafiee and Mr M. Zomorodi of the Directorate General of Telecommunications. An excellent training room was provided for us with full support facilities including a data projector and access to a photocopier. Daniel and myself presented our course using PowerPoint displays prepared by IARU and each of the 16 participants received printed copies of the displays and many other documents and two CD-ROMs with documentation about amateur radio.

We had discussions with many radio amateurs in Tehran, some of whom attended the course. The course participants visited EP3PTT, a station established in the Ministry's office premises in Tehran. The equipment in this station was provided for Iran amateurs by from the IARU Region 3 Stars*** program and may be operated by licensed Iranian operators by arrangement.

There have been amateur radio societies in Iran in earlier years but there has not been an IARU member society. An amateur radio "club", a social meeting group, presently meets in Tehran.

ZL2BHF: ZL2AMJ reported the course as a most memorable experience. He said that Daniel and himself were warmly received.

>From Auckland New Zealand I'm Jim Meachen ZL2BHF for Newsline.

--

Contact between the IARU and the amateurs and the administration of Iran is to continue with further Amateur Radio information to be provided. (ARNewsline(tm))

**

WORLDBEAT - ALBANIA: PROJECT GOODWILL AT DAYTON 2004

Len Geraldi, K6ANP, who is the President of the Northern California DX Foundation has announced that his organization is teaming up with Vertex Standard . The two will combine forces to donate ten complete Yaesu FT 840 stations to Project Goodwill Albania. The gear will be set up at the University of Tirana to boost the successful completion of the project.

The announcement was made at the recent Dayton D-X dinner in Ohio. At the same time Bob Ferrero, W6RJ, stepped forward on behalf of Ham Radio Outlet. He offered up a matching number of antennas. Bob Heil, K9EID, of Heil Sound said that he would supply the needed p sound gear. Other equipment was pledged by AA4XR, N3BNA, K3LP, K7JA, VE1JF, W3BTX, W4MYA, W6EUF, W6OSP, W6UM and W9JUV in addition to those already reported earlier. (Various)

**

ON THE AIR: NEW MID-AMERICA 6 METER BEACON

The Legion of Indianapolis DXers has activated a 24-hour a day 6 meter beacon. Operating as W9VW slash B on 50.069 MHz, the automated 12 watt station is located in the heart of Indianapolis in grid square E M 69 WT. The antenna is an omnidirectional horizontally polarized turnstile at 70 feet. Q-S-N reports go to W9VW, P.O. Box 18495, Indianapolis, Indiana, 46218. (W9IND, QRZ.COM)

**

DX

In D-X, word that IN3ASW and IN3DYG will be active as TU2WL. This, from Cote d'Ivoire or the Ivory Coast through the 1st of June. They plan to operate SSB and possibly PSK31 and RTTY. (GB2RS)

And SM0CMH will be active as SM8C portable SV5 from the island of Kalymnos in the Dodecanese group to the 5th of June. He will operate CW on 10 to 80 meters and perhaps even 160 meters. For both operations, please Q-S-L as directed on the air. (GB2RS)

**

THAT FINAL ITEM: BAY TO BREAKERS

And finally this week, the story of ham radio assisting in a truly fun public service event. It called the Bay to Breakers race and its held every year in the San Francisco. David Hirtz, KG6CEL, reports from the City by the Bay:

--

Audio Only: Hear it at www.anewsline.org
--

By the way, it's called the Bay to Breakers Race because it starts
in the financial district not far from San Francisco Bay and ends at the western most edge of Golden Gate Park overlooking the mighty blue Pacific. More information on this event is on line at www.baytobreakers.com. (ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award is now on. This program is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states and who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org. The cutoff for
nominations this year is midnight on Tuesday, June 30th.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim
Damron, N8TMW, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

>away....

The entire Rewound will be streamed live on the WABC site..It will have hiccups due to the glitchy software they use to remove copyrighted material and AFTRA voiced spots. Maybe they've improved it...haven't listened to the regular programming lately because of the wacko wingnut talkers.

"More Music!! On 77...W..A...B...Ceeeeeee"

## 1309. Re: Is there ANY AM stereo in the US? (was: Re: WJR no longer in stereo)

Michael Salmons <salmonsm@missouri.edu> had written:
| Does ANY station in the US broadcast in stereo anymore?

KABL (960) in the San Francisco Bay Area. It appears to be the last one.
KFRC (610) dropped it four years ago. When I called up to ask about it,
they said it would be back. It wasn't. In other words, KFRC lied to me.

This is accurate.

Clark Reid at KABL told me that he would turn off stereo too if it would
increase the range of the transmitter.

Too bad.

On a good receiver it is a nice sound.

KUZZ (AM) and KWAC in Bakersfield still run stereo. KABC in Los
Angeles was lighting the beacon last time I was down there. So was
their Radio Disney outlet, KDIS (the old KRLA, 1110).

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!
=20
WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform
involves all different kinds of music, including jazz, reggae, blues,
hip-hop, country, rock, and just about everything else under the sun.
Instead of telling our DJs what to play, we allow them to select their
own recordings from our vast and unique library. It is their
responsibility to mix together many different kinds of music in an

intelligent fashion, and show links between musical genres.

As a former radio GM, I am convinced that radio is the best buy for the advertising dollar. It is very low cost and is very effective and I think 95% of businesses should spend at least part of their advertising budget on local and/or national radio.

Many advertisers, though, feel like radio is not as glamorous as television, not as serious as newspaper, and not as timely as outdoor. Of course, I beg to differ on all accounts.

And as someone who has dealt extensively with ad agencies, both as a seller and as a buyer, I know that agencies make their money as a percentage of both the media buy and production costs. I suspect, therefore, that most agencies tend to steer their customers toward the more expensive media outlets with the higher production costs.

That leaves more inventory available on radio for folks who are savvy enough to take advantage of radio's enormous reach and effectiveness. Those weight-loss and gold-coin promoters are smart enough do so, and the radio owners are smart enough to accept their money.

The German service of Radio Luxembourg (or RTL, as it is called now)
has recently re-activated the mediumwave frequency (on 1440 khz)for
its programme in German language. I doubt that this frequency will be
utilised for any other programme, for example one in English language,
in the near future.

## 1321. Radio Sunshine in Luxembourg

Newsgroup: rec.radio.broadcasting
Date: 2004-05-30 03:06:43 UTC
From: chenrams@aol.com
Message-ID: <c9bj43$m1t$1@xuxa.iecc.com>
Source record: 5060

Can anyone tell me if the "old" Sunshine Radio in Luxembourg is still on the air? Broadcasting from the district of Limpertsberg on 102.2 FM, it was the only English speaking radio station in the City of Luxembourg for some time, as far as I know.

I purposely didn't mention the kind of radio, just because it seems to
be on all of it, but just curious, what kind of decent ads do you
hear? Maybe they're just slipping past me.

I'm not in the US, so I wasn't sure how general the problem is. The
type of ads described, I keep hearing on syndicated overnight shows,
like "Coast to Coast". I can't listen to much US programming in the daytime,
and obviously much of the night is now syndicated. So I just assumed
those junk ads had more to do with the type of programming than an ongoing
trend.

<<As a former radio GM, I am convinced that radio is the best buy for the advertising dollar. It is very low cost and is very effective and I think 95% of businesses should spend at least part of their advertising budget on local and/or national radio.

Many advertisers, though, feel like radio is not as glamorous as television, not as serious as newspaper, and not as timely as outdoor. Of course, I beg to differ on all accounts.>>

I'm guessing that when you were a GM the station(s) was/were owned by a company smaller than one of the mega-groups. Or maybe it was taken over by one of them. I think one of the reasons that so many advertisers are by-passing local radio stations is that there's a good chance they are not being called on by account execs who have any clue as to what they are doing. It seems to be the policy of both Clear Channel and Infinity (and possibly others) to fill their sales staffs with quantity rather than quality. Both chains hire herds of sales people, irrespective of experience or qualification. They field such large sales staffs that account lists get thinned out too much for many of them to earn a decent living. So most stations end up with a few successful sales people who call on their old reliable clients, and a revolving door of beginners and other lesser sales people who have neither the sales skill, understanding of radio, nor the ingenuity to convert the vast numbers of potential advertisers into paying customers.

I hear "decent" ads all the time. Whether it's national ads for places like Sears or Radio Shack, or local ads for restaurants, stores, etc., radio is full of them! Now I do spend a couple hours a day on the local sports station, and there one will hear the type of spots you mentioned, plus ads for local adult stores, plus of course "male enhancement."

Some of these ads are tasteless in my opinion, but they may not be in somebody else's opinion. This is a free country and the right to discuss male enhancement goes along with the right to critisize the government. Now as for anyone stupid enough to think any of this crap would actually work, maybe they deserve to be seperated from their money. If anyone is perpatrating a fraud, then they should be prosecuted, but until such time as that happens, they have just as much right to the airwaves as Sears does.

It's not limited to radio. Some night, you should check out the ads on the networks' nightly newscasts... you'll see a disproportional number of ads for patent medicines covering all kinds of gross conditions.

Which version of Stagger Lee? If my memory is correct, Stagger Lee by Lloyd Price in January 1959 was the Number One Single in Billboard Magazine and there were two versions (KFWB in L.A. played the one with the word GAMBLING in it; on American Bandstand, Dick Clark played a version without the word GAMBLING in it for the National Audience.)

Can anyone verify that there were two versions of Stagger Lee by Lloyd Price?

Lee, you were right about my radio group not being one of the big ones. It was owned by a local businessman who had other business interests but no other stations.

The owner's philosophy was similar to that of Clear Channel, To him, it was all about the bottom line, no matter what.

When I went to work for him, he owned the top station in the area. Then he bought the competitor. And then he started dismantling both. He let all the high-paid jocks go, automated the stations and hired minimum-wage baby sitters to watch the computer and throw in occasional weather and liners.

Obviously sales dropped, but since expenses dropped even more, then he remains happy. I got out on the way down, and I'm so thankful to be gone!

Oh, the stations are a joke now. There's dead air on any at any given time. His son is the chief engineer, so no one is pressuring anyone for the sorry sound and performance.

Actually, the blame doesn't rest with WLIB. It was only the executioner. The real blame lies with the FCC, who in thinking that the marketplace is the only arbiter of a station's worth, allowed the new owners of WOWO (WLIB, of course) to make changes to the DA, reducing service area in the process, in order to allow WLIB, which had a larger potential audience and thus a greater profit potential, to increase their nighttime coverage.

But the days when a station had an obligation to serve the city of license and, in the case of the clear and regional channels, the area around the COL, are long gone. And that's what killed WOWO (with WWVA not far behind).

>>
As a jock I played it a million times...never heard different versions or discussion of different versions. As I recall his release was huge but on a unknown label...they probably wouldn't have gone to the trouble.
---
on another note...the Capitol disc from the early 50's of Johnny Mercer doing Accentuate The Positive contained background by the Pied Pipers and the story goes they didn't know what to sing the fill the spaces between Mercer's lyrics. He told em to sing "hen shit" which if you listen to the song...is rather obvious. True story or false rumor?

"I'm an ordinary person
...with an extraordinary job."

The biggest controversy over Lloyd Price's original version of "Stagger Lee" is that Billy gets shot. In the remake, he doesn't.

The remake is often referred to as "the 'American Bandstand' version," which partly answers your other question. Can't tell you about which version KFWB played.

Here are the lyrics to the Bandstand version, from a web site:

The night was clear and the moon was yellow
And the leaves came tumbling down....

I was standing on the corner when I heard my bulldog bark
He was barking at the two men who was arguing in the dark
It was Stagger Lee and Billy, Billy took poor Stagger's date
He said you did me wrong Billy and that's one thing that I hate

Stagger Lee told Billy
I can't let you go with that
Because I loaned you my money
and my girl I want her back
Look out Stag

Stagger Lee went home and he fell down on the floor
He said Billy did me wrong and I don't wanna see him no more
Oh Billy felt bad because he hurt his poor friend Stag
I'm gonna give him his girlfriend and everything that I have

Stagger Lee and Billy never fuss or fight no more
Because he got back his girlfriend and Stagger Lee was no more sore

------------------

I'm sure the world became a better and safer place because some kids
were protected from the corrupting influence of the original.

Could well have been a local cut job. I know very well that when Brown-Eyed
Girl came out, our station PD spent an hour or so carefully removing "Making
love in the green grass behind the stadium" and replacing it with another
line, with razor blade on 1/4". This is the version we aired.

Jerry Lawson of The Persuasions acapella group has gone solo and recorded two songs with a band: He

Don't Love You (he is harmonizing with himself) and Stagger Lee. The Persuasions did IDs and Promos

for KPPC-FM Pasadena, California (the group is acapella) in 1970 and 1971.

-start-

Artist: Neil Diamond
Album: September Morn'
Title: Stagger Lee

The night was clear and the moon was yellow
And the leaves came tumbling down

I was standing on the corner
When i heard my bulldog bark
He was barking up at the two men
Who were gambling in the dark

It was stagger lee and billy
Two men who gambled late
Stagger lee threw a seven
Billy swore, he threw an eight
Stagger lee told "billy,
I can't let you get away with that
Well, you've won all my money
And my brand new stetson hat"

Stagger lee ran home
Went and got him his 44
Said, "i'm going to the bar room
Just to pay that debt that i owe"

Go stagger lee, go stagger lee
Go stagger lee, go stagger lee
Said, "i' m going to the bar room
Just to pay that debt that i owe"

Stagger lee went to the bar room
Boy, he stood across the bar room doors

Said, "now, nobody move"
And he pulled out his 44

"stagger lee", cried billy
"oh, please don't you take my life
I got me three little children
And a very sickly wife"

Go stagger lee, go stagger lee
Go stagger lee, go stagger lee
"got me three little children
And a very, very sickly wife"

Stagger lee shot billy
Boy, he shot that poor boy so bad
That the bullet came thru billy
And went right thru the bartender's glass

While i was standing on the corner
When i heard my bulldog bark
He was barking up at the two men
Who were gambling in the dark

Go stagger lee, go stagger lee
Go stagger lee, go stagger lee
Well, he was barking up at the two men
Who were gambling in the dark

Here are the lyrics to the Bandstand version, from a web site:

The night was clear and the moon was yellow
And the leaves came tumbling down....

I was standing on the corner when I heard my bulldog bark
He was barking at the two men who was arguing in the dark
It was Stagger Lee and Billy, Billy took poor Stagger's date
He said you did me wrong Billy and that's one thing that I hate

Stagger Lee told Billy
I can't let you go with that
Because I loaned you my money
and my girl I want her back
Look out Stag

Stagger Lee went home and he fell down on the floor
He said Billy did me wrong and I don't wanna see him no more
Oh Billy felt bad because he hurt his poor friend Stag
I'm gonna give him his girlfriend and everything that I have

Stagger Lee and Billy never fuss or fight no more
Because he got back his girlfriend and Stagger Lee was no more sore

-end-

Source record: 5086

<<Lee, you were right about my radio group not being one of the big ones. It was owned by a local businessman who had other business interests but no other stations.

The owner's philosophy was similar to that of Clear Channel, To him, it was all about the bottom line, no matter what.

When I went to work for him, he owned the top station in the area. Then he bought the competitor. And then he started dismantling both. He let all the high-paid jocks go, automated the stations and hired minimum-wage baby sitters to watch the computer and throw in occasional weather and liners.

Obviously sales dropped, but since expenses dropped even more, then he remains happy. I got out on the way down, and I'm so thankful to be gone!>>

I'm guessing that one of the first things this guy got rid of was the copywriter, if there was one. Why not let the sales people write the copy. Here's why. Even the relatively few competent sales people are not necessarily competent copywriters. And the cluless ones are, well, cluless. One reason that advertising sales evaporate is lack of results. And pointless, boring, clumsy ad copy does not produce results for the adverser.

If you are listening to a radio station and you hear "for all your (advertiser's product) needs," "(holiday or event) is upon us," "save, save, save," or just a mindless husband/wife or boss/secretary conversation crammed with stilted (client's business) jargon, you can be pretty sure that the commercial was written by the account exec or, worse, the client. Besides being generally ineffective advertising, the hours a salesperson spends agonizing over crappy copy add up to time not spent doing his/her real job: selling advertising.

Lee... I am impressed! You are right. The first thing our owner did WAS fire the copywriter.

At that time, the station's commercials were so far ahead of any station within 100 miles. At first, I couldn't put my finger on the reason. Then I got to know our copywriter and found out that all those good ideas were coming out of that one young lady. Give her the facts, and she could whip out a commercial in a couple of minutes. And it worked! Those spots were dynamite!

But it appeared to the owner that our copywriter was merely a drain on the bottom line. She didn't sell anything, didn't produce anything (that he could see), and only seemed to look busy maybe an hour or so each day. So he fired her.

That's when it became real obvious just how important that copywriter had been to our station.

After that, all the spots were at best, mediocre. Our sales people were stuck writing spots when they could be selling. And the ones they wrote were often worse than that of a grade school student. I tried writing spots myself, and I was so slow and terrible at it that I quickly abandoned that idea.

Hats off to anyone who can write good radio.

# 1348. Re: Is there ANY AM stereo in the US? (was: Re: WJR no longer in stereo)

Newsgroup: rec.radio.broadcasting
Date: 2004-05-31 23:17:18 UTC

Source record: 5088
Cross-posted to: rec.radio.broadcasting,alt.radio.broadcasting

Michael Salmons <salmonsm@missouri.edu> had written:
| Does ANY station in the US broadcast in stereo anymore?
| More specifically, any 50kw stations or at least something I can pick
| up in the US midwest at night? I purchased an AM stereo campatible
| tuner about three months ago and have never even seen a hint of stereo
| on the AM band.

I should have looked more closely at the domain name. If you are
indeed in central Missouri, you're probably out of luck. It's never
been great AM territory anyway, with all but one local station (KWOS)
having no more than a kilowatt of power. Ten years ago, WDAF (610)
and KFEZ (1190) in Kansas City were broadcasting in stereo,
as was KMOX from St. Louis. However, Entercom has since thrown WDAF's
heritage in the trash and went to FM; KFEZ went through several
permutations and is now a Disney station; I don't know KMOX's
present state and it doesn't have such a great signal in Columbia
anyway. The Crawford stations in St. Louis, KJSL (ex-KXOK) and KSTL
(630 and 690 respectively) may be running stereo. Entercom is
running KXTR in Kansas City on the expanded band at 1660. At one
time KTTN in Trenton (1600) claimed to be running stereo. I've
never verified that, however. It was still running a music format
when I was in north Missouri last autumn.

At night, WLS from Chicago is probably your best bet. However, adjacent-channel
KFAL from Fulton puts a surprisingly good signal into Columbia even
with just 100 watts or so, so you may expect some interference.

AM stereo can sound very good, but program directors, fearful of
anything new, have employed all sorts of old wives' tales (despite
contrary empirical evidence) to try to kill it and, now, IBOC will
be delivering the decisive blow.

Back in the late Fifties, when I was the CE for an Arkansas AM kilowatter, the station had a big book of ad copy. All one had to do was to fill in the blanks.

In return for my on call engineering service, I got a stipend and all the free ads for my TV service shop they could fit in.

The DJs were students at the adjacent college. My favorite DJ, who had the best voice, loved to cut commercials for me. They were great. And their results were great, too! <G>

In recent years, I heard an ad on a mom and pop station that came out of that book. It begins, "There's Spring in the air." So the book is still around.

> New York's WABC-AM (770 kHz) will sound different next Monday, Memorial Day,
> between 6am and 6pm local time (1000-2200 UTC). The station will present its
> annual "Rewound" special, 12 complete hours of original programming from the
> 60's and 70's when WABC was America's, and the world's, number one Top 40
> station.
>
It was awesome! Wish I could have heard it over the air but since
I'm in Houston I have to settle for Internet reception. What I heard
was great....It's the type of format that got me interested in radio to
begin with.
I remember listening to Harry Harrison on the rare occasion my
family traveled to New York. I couldn't name the other jocks, but I
could occasionally pull in WABC on my transistor radio...It was usually
overpowered by 760 WJR.
Thanks to Johnny Donovan and crew for putting it together and thanks
to WABC for putting it on the air.

I wish WLS and CKLW would do something similar.
These were the two big-time signals I listened to growing up in
Dayton Ohio (along with local favorites WONE (before it switched to MOR
then Country now MYOL-type clone), WING (before switch to sports) and
WTUE (in its top 40-days before AOR).
As I recall WTUE was automated during the day and simulcast with the
WONE-am top-40 at night. Dave Michaels then did nights before it
switched to live top 40 and WONE-am switched to MOR for a very short
period of time..then Country.

WONE Jocks I remember: Tom Campbell (nights) (My all-time
favorite), and Dave Dayton (mid-days?) Johnny Midnight (you guess the
time slot).

WING Jock: Steve Kirk (am drive) (couldn't stand him but he was
around forever)

WTUE Jocks: Gregg Mason (am-drive with Phil Easily doing news)
(Mason is my second-favorite "local" jock -- now doing country in
Dallas), Dave Michaels (nights). Corny promo---"50-thousand watts of
stereo music power-power-power" -- with power alternating between right
and left channels)

STAGGER LEE was a #1 Billboard Hit by LLOYD PRICE in January-February 1959

Two Versions with The American Bandstand version having been sanitized:

-start-

THE OFFENSIVE LYRICS: Here are the words that made Dick Clark nervous:

The night was clear and the moon was yellow
And the leaves came tumbling down

I was standing on the corner when I heard my bulldog bark
He was barkin' at the two men who were gamblin' in the dark
It was Stagger Lee and Billy, two men who gambled late
Stagger Lee threw seven, Billy swore that he threw eight

Stagger Lee told Billy, "I can't let you go with that"
"You have won all my money and my brand new stetson hat"
Stagger Lee started off goin' down that railroad track
He said "I can't get you Billy but don't be here when I come back"

Stagger Lee went home and he got his fourty-four
Said "I'm goin' to the barroom just to pay that debt I owe"
Stagger Lee went to the barroom and he stood across the barroom door
He said "Nobody move" and he pulled his fourty-four

Stagger Lee shot Billy, oh he shot that poor boy so bad
Till the bullet came through Billy and it broke the bartender's glass

-end-

-start-

Here are the lyrics to the Bandstand version:

The night was clear and the moon was yellow
And the leaves came tumbling down....

I was standing on the corner when I heard my bulldog bark
He was barking at the two men who was arguing in the dark
It was Stagger Lee and Billy, Billy took poor Stagger's date
He said you did me wrong Billy and that's one thing that I hate

Stagger Lee told Billy
I can't let you go with that
Because I loaned you my money
and my girl I want her back

Look out Stag

Stagger Lee went home and he fell down on the floor
He said Billy did me wrong and I don't wanna see him no more
Oh Billy felt bad because he hurt his poor friend Stag
I'm gonna give him his girlfriend and everything that I have

Stagger Lee and Billy never fuss or fight no more
Because he got back his girlfriend and Stagger Lee was no more sore

-end-

I'm selling my entire archive of Stern shows. Price is negotiable and
will be very fair. MP3's will be burned onto DVD-ROM's (around 6).
Email me for a complete show list or with any questions. I am a
"Premier" Paypal member with over 400 successful transactions logged.
Free shipping in the states, and I'll accept various payment methods.
The MP3 quality is good overall, but great since March '04 since these
may be the final open-air shows. (Archive will be up-to-date at the
time of shipping.) Drop me a line!

Frank

From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <c9m9og$79k$1@xuxa.iecc.com>
Source record: 5099

June 02 2004

Addis Ababa - Ethiopia will issue a long-delayed radio broadcast licence to private operators beginning in August, the information minister said on Wednesday, opening slightly the country's tightly-controlled media.

Many Ethiopians and rights groups have asked for private radio and television stations to be allowed to operate independently.

"Technical works in frequency allocations that would allow private broadcasters to operate have been prepared and the licence will be issued starting next August," Minister of Information Bereket Simon told parliament.

Bereket said the licence will be only for FM broadcasts, and medium- and short-wave as well as private television stations will be considered later.

Bereket said his ministry had begun to discuss a draft press law with members of the media before presenting it to the cabinet.

The controversial draft has been described as restrictive and discriminatory by journalist groups, who say it aims to stop reporters operating freely.

For sale:

Partial interest in fulltime AM station in Savannah, GA. If I have to explain Savannah to you, you don't belong there!

Joint venture. Active or inactive investors with $25,000 or more each are welcome. Total asking price will be about $500,000. NO real estate is included.

For the "unwashed", Savannah has a population of about 200,000 and about 300,000 in the metro area. It is one of the most beautiful cities in the South.

All investors would be on the board with full voting rights if desired.

Disclaimer: (Big Brother made me do it!!)There is an element of risk and you could lose all or part of your investment.

Tel: (478)741-1710 in Macon, GA. I am a semi-retired broadcast engineer.

References:

a)My parole officer. Mr. Larson E. Rapp, c/o Zing-Zing prison, Ossingstinker, NY 12345. Tel: 1-800-IMA-THUG.

b)Trade reference...Brazilian Bandit Airways, Oshkosh, WI. (Those in the aviation "know" we see the connection to Oshkosh)... Purchased a one-way ticket to Rio using all small and unmarked bills. Do not worry, will not leave until the investment funds are in!

Only those fully identifying themselves will be furnished callsign.

The references are in fun, the deal is VERY REAL!!

Godfather of Gangsta

In the red-light district of St Louis in 1895, a pimp shot a man dead in an argument over a hat. The ballad telling the story has been recorded by hundreds of bluesmen and jazzers - and even the Clash. It also helped create modern-day rap. Cecil Brown tells the remarkable tale of Stagolee

Friday May 9, 2003
The Guardian

I was standin' on the corner
When I heard my bulldog bark;
He was barkin' at the two mens
Who gamblin' in the dark.
It was Stagolee and Billy,
Two men who gamble' late,
Stagolee throw seven,
Billy swore that he throwed eight.
Stagolee told Billy,
"I can't let you go with that;
You have won my money
And my brand new Stetson hat."
Stagolee went home,
And got his forty-four,
Says, "I'm goin' to the bar room,
To pay the debt I owe."
Stagolee went to the bar room,
Stood four feet from the door
Didn't nobody know when he
Pulled his forty-four.

Stagolee found Billy,
"Oh please don't take my life!
I got three little children,
And a very sick little wife."
Stagolee shot Billy,
Oh he shot that boy so fas'
That the bullet came through him,
And broke my window glass.
Some folks don't believe,
Oh Lord that Billy dead
You don't believe he gone,
Jus' look what a hole in his head.
These are the words sung by the black prisoner Hogman Maxey to the song collector Dr Harry Oster at Angola state penitentiary in Louisiana in 1959.

I first heard the ballad of Stagolee around the same time, sitting under the shade of a tree at the end of the tobacco road in North Carolina. The way my Uncle Lindsey recited the legend, Stagolee was a young god of virility, as impulsive, as vulgar, as daring and as adventurous as the young black field hands wanted him to be. My uncles and their friends recited their rhyming, obscene praise of Stagolee's badness and, at the day's end, gathered in JC Himes's jook joint to dance with girls, drink whiskey and fight. Their nocturnal activities seemed to me to be merely an extension of Stagolee's.

The origins of Stagolee coincide with those of the blues, which sprang up in the 1890s. The first expression of it was as a field holler of former plantation slaves, who carried it with them as they migrated to the work camps along the Mississippi.

Since then, it has taken musical shape as ballad, as blues, as jazz, as epic and as folk song. Its influence can be found in every 20th-century American cultural form, from rock'n'roll to literature to politics to cinema to hip-hop. There are at least 20 jazz recordings, by musicians ranging from Cab Calloway, Jimmy Dorsey and Peggy Lee to Duke Ellington. More than 100 bluesmen, from Champion Jack Dupree and Sonny Terry to Mississippi John Hurt, have recorded it.

During the 1930s and 1940s, the widely respected folklorist John Lomax and his son collected it from prisoners across the south, in the form of a strictly folk protest music; at least a dozen recordings survive in the Library of Congress.

Stagolee - or Stack Lee, or Stagger Lee - has thrived as a soul tune rendered by James Brown, Neil Diamond, Fats Domino and Wilson Pickett. Performers of Stagolee have ranged from levee camp workers to white female "coon-shouters" (white performers who sang as black-face minstrels); from whorehouse pianists to black female blues shouters; from black convicts to Huey Lewis and the News, Bob Dylan and the Grateful Dead; and from 1920s Hawaiian guitarists to 1970s English punks like the Clash, who recorded it in 1979. The earliest

recordings, in 1923, were made by two white dance bands, Fred Waring's Pennsylvanians and Frank Westphal and His Orchestra. Australian rocker Nick Cave recorded it in 1996, in Murder Ballads.

Then there are the songs in which Stagolee appears disguised. As Greil Marcus observed, Stagolee was "Muddy Waters's cool and elemental Rollin' Stone; Chuck Berry's Brown-Eyed Handsome Man; Bo Diddley with a tombstone hand and a graveyard mind; Wilson Pickett's Midnight Mover, Mick Jagger's Midnight Rambler... When the civil rights movement got tough, [Staggerlee] took over. And Staggerlee would come roaring back to the screen in the 1970s, as Slaughter, Sweet Sweetback, Superfly."

Though my interest in the legend began in my childhood, it was many decades later, researching a book on the phenomenon, that I discovered the myth's origins, in a murder in 1895 in St Louis, then one of the largest cities in the US. The killer was a man named Lee Shelton.

Shelton was born on March 16 1865, in Texas. Like New York, San Francisco and New Orleans, during the 1890s St Louis had a large red-light district. Most of the ballads say Stagolee was a gambler, but as I dug deeper it appeared that he was also a "maquereau", a French term for pimp often abbreviated to "mack". St Louis, which was founded by the French, still used the term to describe men who were kept by women.

In folk poetry, we find songs praising him:

Stackolee was a good man
Everybody he did love
The pimps and whores all swore by Stack -
By the everlasting stars above
They all loved Stackolee!
As a pimp and leader of a group called the Stags, Shelton was a slum hero, reigning in an area called Deep Morgan, one of the few places in the city where blacks and whites could commingle, and where blues, ragtime and "coon songs" had their origins. It was in a bar in this area that Shelton shot and killed Billy Lyons.

According to eyewitness George McFaro, on Christmas night, 1895, around 10 o'clock, Shelton walked into the Curtis saloon, in the heart of Deep Morgan, and asked the bartender: "Who's treating?" In reply, someone pointed out William Lyons. Apparently, the two men drank and laughed together for some time until the conversation turned to politics.

Soon, they began to exchange blows by striking each other's hats. Shelton grabbed Lyons's derby and knocked it out of shape. Lyons said he wanted payment of "six bits" from Stagolee for damaging his derby. Then Lyons grabbed Shelton's hat. At this point, everything changed. The argument turned on Shelton's Stetson, and whether Billy would give it back to him. In an attempt to make him give it back, Shelton pulled

his .44 Smith & Wesson revolver from his coat, and hit Lyons on the head with it. Still Lyons would not relinquish the hat. Shelton demanded it again, saying that if Lyons didn't give him his hat immediately, he was going to kill him.

Then Lyons reached into his pocket for a knife and approached Shelton, saying: "You cock-eyed son-of-a-bitch, I'm going to make you kill me." Stagolee backed off and took aim. The 25 people in the saloon flew for the door. Only bartenders and a few others drinking at the bar stayed. Witnesses later testified to the coroner that they then saw Shelton shoot Lyons.

Leslie Stevenson, one of the witnesses, claimed that after he was shot, Billy "staggered against the side of the bar, leaned against the railing, holding the hat in his fingers like that, and it seemed he was getting weak, and he let the hat drop out of his hands. About that time, Stagolee says, 'Give me my hat, nigger' . . . and he picks it up and walks out into the brisk air."

A newspaper account also described Stagolee as walking over to the dying man still holding on to the bar and snatched his hat from Lyons's hand, put it on his head, and walked out "coolly" into the night air.

The murder had serious political consequences. Lyons, it turned out, was a staunch Republican, as were nearly all of St Louis's 25,000 black people. Lyons's stepmother, Marie Brown, owned the famous Bridgewater saloon. Her son-in-law, Henry Bridgewater, was reputed to be the richest black man in St Louis. Lyons belonged to this powerful clan loyal to the Republican party, which had freed the slaves. A new generation, represented by Stagolee, was anxious to vote for the Democrats. Stagolee had gained the support of the Democrats and so was hated by most of the black bourgeoisie, who were represented by Billy Lyons.

In the 1890s in St Louis, black people sought political protection with their right to vote. Both the Republican and the Democratic parties thought they could win if they got the black vote. The majority of black St Louisans voted Republican, but during the Republican convention, in the summer of 1896, many - unhappy that the national Republican party ignored their interest - broke with the party.

This break owed much to the black pimps in St Louis. Under the guise of "sporting" clubs, frequently called the 400 Clubs, pimps, saloon-keepers, and gamblers exerted voting power for the Democratic party. Some saloon-keepers represented the "unofficial" Democratic party.

They took him to the courthouse
Judge Murphy sat on the bench
An' the first one to put her can in a chair

Was Stack-o-Lee's lovin' wench
Down at the trial, down at the trial of Stack-o-Lee.
Many of the figures in the ballad - Judge Murphy, Stagolee's defence lawyer Nat Dryden, Stagolee's wife - were well known figures in the area. Other versions of the ballad make references to historical places and people, like St Louis Chestnut Valley, Lillie Shelton, and bartenders Tom Scott and Frank Boyd. We can assume, therefore, that the hero Stagolee who is the centre of the poem is a reference to the real man Lee Shelton.

Shelton's white lawyer, Dryden, may have been brilliant, but he also was a bohemian with an opium addiction. In the first trial, Dryden got Stagolee off with a hung jury. After two years in the courts, at the retrial in 1897, with a new judge and in the absence of Dryden, Stagolee was sentenced to 25 years in the Jefferson penitentiary. After being released by the Democratic powers that be, he was out for a few years and then returned for pistol-whipping another man. He died in the state prison in 1912, aged 46.

After the murder, the ballad telling of Stagolee's exploits began to spread across the American south and west. A circus performer heard it in the Indian territory in 1913. Early folklorists took an interest in the ballad as early as 1911, when Guy B Johnson published the first version in the prestigious Journal of American Folklore. John Lomax went around the southern states collecting the songs for the Library of Congress during the 1930s. During this time, most black men were either in prison or exploited on farms as sharecroppers. They sang about Stagolee and the Devil. The Devil was the white man.

In 1959, the song Stagger Lee became a number one for the rock'n'roller Lloyd Price, selling a million copies and topping the charts. In the 1960s, the civil rights movement took to Stagolee. At the height of the Black is Beautiful era, James Brown and Wilson Pickett recorded the Stagolee song. Bobby Seale, the leader of the Black Panthers, used it to recruit young black men to the party. I once got the opportunity to ask him why. He replied that Stagolee represented a template for black resistance to whites that just needed to be organised. "Stagolee was a bad nigger off the block and didn't take shit from nobody," he said. "Malcolm X at one time was an illegitimate hustler. Later in life Malcolm X grows to have the most profound political counsciousness... So symbolically, at one time he was Stagolee... To me, Stagolee was the true grassroots."

During this period, Stagolee also took the evolutionary leap that would go on to produce rap music and hip-hop. The connection between the bad man ballads and hip-hop was the form known as the "toast" - a recited story in verse. In telling the Stagolee legend as a toast, the speaker takes on the role of Stagolee. He begins to take on the character of the hero he is singing about. Asserting themselves as bullies and bad men, young black men "perform" Stagolee. The toast became an instrument that allowed them to be powerful and charismatic.

Shedding itself of the musical accompaniment that came with the ballad, Stagolee took his first step to being the basic form that the oral poets, the first hip-hoppers, utilised. During the 1980s, the first rhymers of rap took Stagolee to heightened levels. They used the Stagolee narrative structure as their own personal narratives.

In the development of rap music and hip-hop culture, Stagolee's influence is very clear. It persists in rap in the use of the first-person narrator, the performers' adoption of nicknames, the social drama, the humour, and participation in the commodity culture. >From the 1930s to the 1950s, most reciters of Stagolee told the story in the third person. After the rise of the toast tradition in the 1960s, most reciters told the story in the first person. The audience sees through the eyes of the character the rapper creates. The "I" is the bridge between the "I" of the rapper and the "I" of the character.

A reciter of Stagolee associates himself with the hero, but he also makes clear that he is not Stagolee. He can effectively change himself in the eyes of his spectators and listeners. In gangsta rap, the performers are acting out the lives of the criminals in an effort to dispel the criminal from their midst, as a way to get rid of the negative energy.

Stagolee is also present in rap music in the use of cliche: Stagolee is composed of cliche lines that are easy to remember. In rap music, performers found it necessary to use such cliches to keep the rap going.

The final influence that Stagolee has on rap was participation in commodity culture. In the 1890s, the Stetson became a symbol of black male status; in the late 1990s, baggy pants became a signifier of status. As in ear lier generations, ghetto blacks fight against a white appropriation through weird dress. To be able to purchase these commodities, young people in the ghettos resort to hustling, as their parents and grandparents did. They can't afford to believe that a nine-to-five job would solve their problems, because they could never get those jobs.

So gangsta rappers use the lifestyle commodities - cars, clothes, girls - as signifiers of success and wealth. They scrap the old cliche of the ghetto hustler with a slick suit and a truckload of hot goods for the new archetype of the rapper. The term and the concept of the modern-day "mack" are a retrieval of the old cliche of the St Louis mack that Lee Shelton once embodied. And it is not just the mack who is revived, but the women who will do anything for him, including sell their bodies. The girls rappers talk about are whores, or "ho's", just as they were back in the pre-industrial ballads of Stagolee.

Except as appearing in nearly every gangster rap, how does the ballad survive today? What made Stagolee survive for over 100 years? One of the reasons is that performers keep reinventing the song in their own image. Apart from such interpretation from black singers, like Mississippi John Hurt, whites keep reinventing it too.

While he was waiting to record an album, Nick Cave was reading a book on urban black folklore and came across a version of the Stagolee toast. Cave decided to record it for two reasons. He was fascinated, in the first place, by the homosexuality of this particular version. In the toast, Stagolee makes Billy "drop down and slobber on his head". "The final act of brutality, where the great Stagger Lee blows the head off Billy . . . while he is committing fellatio [was] especially attractive," said Cave.

Cave went further, adding lines from another blues ballad. "There's a verse to our version that goes, 'I'm the kind of cocksucker that would crawl over 50 good pussies to get to one fat boy's asshole,' which I heard on an amazing talking blues song by a guy who, in the song, introduces himself as Two-time Slim. I've always thought that was a groovy line so I just threw it in for good measure."

William L Benzon wrote that European-American racism has used African-Americans as a screen on which to project repressed emotions, particularly sex and aggression. We can see this when we look at how white people have used Stagolee. The key to this insight is the concept of projection. "One aspect of this projection," Benzon says, "is that whites are attracted to black music as a means of expressing aspects of themselves they cannot adequately express though music from European roots."

The screen Cave adds to Stagolee tradition tells us more about the culture of the singer than it does of the culture of the song. Stagolee as African-American tradition is the screen that allows the projection to take place. "The reason why we [recorded it] was that there is already a tradition," said Cave. "I like the way the simple, almost naive traditional murder ballad has gradually become a vehicle that can happily accommodate the most twisted acts of deranged machismo. Just like Stag Lee himself, there seems to be no limits to how evil this song can become."

How long will Stagolee get passed on? On a Sunday afternoon late last year, Taj Mahal appeared on stage at Yoshi's, a nightclub in Oakland, California. At 60, he is as energetic and solid as he was when I last saw him perform, 20 or so years ago. That afternoon, he had asked that parents come and bring their children. As Taj sang and strummed his big guitar, kids as young as five and as old as 17 were bobbing their heads to the rhythms of the blues.

"Now how many of you kids have heard of bandits," he asked as he stood on the edge of the stage, staring out at the young, white faces. Bandits? Sure. They had heard of bandits. "Okay," Taj said. "And you've heard about gambling? Well, this ballad is about a bandit who gambles! This song is about Stagolee!"

Backstage, sitting in a folding chair, Taj told me how he came across the legend. "The first I heard of Stagolee was from Lloyd Price," he said. "I was a Lloyd Price fan. I was always dancing to him. Then by the 1960s, I kept hearing it on blues anthologies - Mississippi John

Hurt, and Furry Lewis's versions. As a child, I'd heard these stories about the bad man - bad man Stagolee - from my mother, who was from the low country in South Carolina. Then there was the other side of my family, my father is from the Caribbean, and from him I heard about 'bad John'. They would say, 'Bad John, stay out he way, man!' "

Taj laughed. This was great fun for him. He was Stagolee. As long as there are living historians like him, Stagolee will never die.

Cecil Brown's book Stagolee Shot Billy is published on May 29 by Harvard University Press.

A currently increasing practice in radio advertisements includes longer and longer "disclaimers" of one sort or another read in a rapid-fire voice. I may be imagining it, but some of these disclaimers account for a third or more of the ad time.

I doubt I'm the only one who finds them excessively annoying. In fact, they are so annoying that I can't tell you what products are being sold (autos? financial products?) and when I tune away to another station to get away from these ads (which is inevitable), its likely that I won't return for a while. So not only are they ineffective, they've got serious unintended consequences.

The "disclaimers" themselves are probably of dubious legal effect, given the fact that they're nearly incomprehensible and probably not complete in any event. If some legal department thinks its really necessary, it would be far better to make a brief reference to another source for more information and sell the product and not try to cut loopholes.

If personality doesn't count, she was quite an attractive young woman.
The issue here is not whether or not you find her appealing, it's that
a serious betrayal of trust took place.

No matter how much she and I dislike each other I have to side with
her, in spite of her lying about the pictures being of her.

It was a cruel thing to do.

So not only are they ineffective, they've got serious unintended consequences.>>

What is even more sleazy is that the disclaimers are often mumbled at the BEGINNING of the commercial so that they can be mistaken for "fine print" associated with the previous message. They seem to be mostly for car dealers. Every time I hear one of those ads it makes me wonder why anybody would do business with someone who is so obviously bullshitting them in the effort to just get them into the showroom; it can only get worse once you start dealing with them in person. (Sort of like spam with totally bogus subject lines. If they had to trick you into opening the e-mail, what makes you think they aren't going to cheat you if you order the V1c0D1n or whatever crap they are selling.)

Nevertheless, Rich, I was always told when I was growing up (and have continued to pass on to my kids) that you should never do anything that you might regret later in life, or if you did, be prepared to accept the consequences of those actions. The fact that Laura whats-er-name was put into a position of shame (at least as it relates to her current "moral standards") is a fitting result in counterpoint to her excessive hypocracy. "Don't do as I did, just do what I say" is exactly the reason why so many kids end up regretting the consequences of their actions, since it's natural for them to do precisely what they're told not to do.

There's better ways to raise kids (not that this applies here....I can't imagine any self-respecting teen would listen to Schlessinger) but the idea that she can sit in judgement of those who may not share her newly-acquired morality is why, in this case, humiliation can be good.

# 1374. Amateur Radio Newsline™ Report 1399 June 4, 2004

Newsgroup: rec.radio.broadcasting
Date: 2004-06-04 23:43:33 UTC
From: radionews@aol.com
Message-ID: <c9r1f5$t2t$1@xuxa.iecc.com>
Source record: 5014

Amateur Radio Newsline™ Report 1399 June 4, 2004

Amateur Radio Nerwsline Report number 1399 will follow in a few moments. First, this important announcement from our Support Fund Administrator Andy Jarema, N6TCQ:

--

The following is not necessarilly for retransmission. I guess you already know that if you are hearing my voice on a closed-circuit advisory it means that Newsline is again facing a financial crisis.

Well, you're right. The funds are so low that we may not be able to pay the bills from May. Worse, for the first time in our history, we even do not have the money to send a representative to Huntsville this
summer to present the 2004 Young Ham of the Year Award. And in two words --- "that's bad." "Real bad."

The solution to both of these problems really lies with you. Our world-wide all volunteer staff produces these newscasts for you. The all volunteer Young Ham of the Year Committee labors tirelessly each year to select a youngster to receive the Award. Joe Eisenberg, K0NEB, oversees the Newsline sponsored Roy Neal, K6DUE, Amateur Radio Mentoring Project database, doing so at no cost. The list goes on and on.

I too am a volunteer, but I have to be the realist. I'm the accountant
who has to look at the bottom line and when it turns red, I have to say -- hold on -- there is no more money to continue. And that's about where we are right now.

So, here's the bottom line. If you want the newscasts to continue. If you want the mentoring program to continue and the Young Ham of the Year Award to continue, we need you to show it now -- right now -- through your financial support of Amateur Radio Newsline.

Remember that Amateur Radio Newsline is a federally chartered 501(C)(3) and California state not-for-profit corporation. This makes your donations tax deductible, whether you're an individual or a club.
The address to send them to is the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California 91066. If you missed the address don't worry. It will be repeated at the end of this week's report.

For now I thank you for listening, for responding and offer you this weeks newscast which follows immediately.

--

Amateur Radio Newsline report number 1399 with a release date of Friday, June 4, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio on alert on a stormy Memorial Day
weekend, a BPL deadline is extended, another country says goodbye to Morse code and June is Amateur Radio month. We'll tell you where on
Amateur Radio Newsline report number 1399 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAMS AID AS TORNADOES CONTINUE

Strong storms with funnel clouds raced across Indiana during the Memorial Day holiday forcing thousands of Indianapolis residents and race fans alike to take shelter from tornadoes. Jack Parker W8ISH was
tracking the storm that left behind a train of devastation while putting radio amateurs on alert.

--

For the city of Indianapolis, the Race Day storms could not have happened at a worse time. Hundreds of thousands of people were in town for the 88th running of the Indianapolis 500 mile race and for the NBA Playoff game between the Indiana Pacers and the Detroit Pistons. The rain delayed race was nearing the end when race officials threw out the checkered flag and warned nearly 400 thousand race fans to immediately take shelter.

Accordling to early reports an F3 tornado passed just south of the Indianapolis Motor Speedway and began its destructive path across the south and east side of Marion county. Hundreds of central Indiana amateur radio operators were kept busy from Sunday morning until late Sunday evening tracking the funnel clouds and reporting ground truth observations back to the National Weather Service office in Indlianapolis.

While the Pacers took on the Detroit Pistons, tornado sirens blared outside, motorists got stuck in traffic jams, and tree limbs and debris were tossed into roadways. A funnel cloud described as two blocks wide, tore the roof off a nursing home leaving nearly fifty bed-ridden patients without shelter. They spent over an hour out in the pouring rain as rescue personel attended to their injuries. Downed
power lines, flooded streets and massive amounts of debris from damaged homes made it difficult for Indianapolis police and fire

personnel to reach those in need.

According to the National Weather Service more than a dozen tornadoes had touched down in 10 Indiana counties. This was the third time in three years that powerful tornadoes have ripped across central and southern Indiana.

Reporting from Indianapolis, for Amateur Radio Newsline, this is Jack Parker W8ISH

--

Marengo in southern Indiana was hard hit, with at least one fatality, four injuries and numerous homes damaged or destroyed. But Indiana was not alone in dealing with weather related problems. According to news reports several people in Kansas and Nebraska were injured by the
weekend's tornadoes which also ripped through parts of those states. Ham radio was on alert there as well. More on this ongoing story in future Amateur Radio Newsline reports. (ARNewsline(tm), W8ISH)

**

THE BPL FIGHT: REPLY COMMENT DEADLINE EXTENDED TO JUNE 22

The FCC has extended the deadline to file reply comments on already filed responses in its broadband over power line Notice of Proposed Rule Making ET Docket 04-37. The FCC granted the extension based on requests from the National Antenna Consortium and the Amherst Alliance.

The two organizations had sought to have the FCC postpone the filing comment deadline until either September 1 or two months after the public release of the NTIA's Phase 2 study -- whichever was later. The Commission responded that in its view an additional three weeks should be ample time to respond to any NTIA submission.

The FCC does not routinely grant such time extensions, and it denied earlier petitions, including filings from the ARRL. Now it has relented and has set a new Reply Comment deadline of Tuesday, June 22nd. (ARRL)

**

RESTRUCTURING: MORE COUNTRIES DROP CW

More restructuring has taken place in Europe. The GB2RS News Service reports that Finland has now officially dropped the Morse code requirement for that nations hams to have access to the High Frequency
bands. GB2RS says that Finland actually deleted the Morse requirement
on the 1st of November of 2003. Now, with the latest rules revisions there are now there are only two classes of amateur license in that

European nation.

Also from GB2RS word that former French Class 2 licensees with F1 and F4 callsign prefixes are now being heard on the High Frequency bands.
According to the French national amateur radio society, this change was implemented on May 16th.

But C-W is far from dying or dead on the other side of the Atlantic. In fact the fourth European High Speed Telegraphy Championships take place the 15th through the 19th of September in Montenegro and Serbia.
(GB2RS)

**
RESTRUCTURING: NEW ZEALAND SAYS GOODBYE TO MORSE

Finland and France are not alone in saying goodbye to Morse code testing. So has a nation down-under.

On June 4th New Zealand's Telecommunications regulators issued a decree that says Morse proficiency testing has ended and thatNew Zealand Limited Class operators will soom have access to the high frequency bands. In fact, regulators have decided to upgrade Limited Class operators to the New Zealand General Class.

According to the notice, operators will not be required change their callsigns or take any other action.. The new rules go into effect on June 17th. (ZL2BHF)

ENFORCEMENT: POLICE JAMMER GETS 8 YEARS IN PRISON

A man convicted of jamming a Wisconsin emergency service radio system will spend the next 8 years behind Federal prison bars. Amateur Radio
Newsline's David Black, KB4KCH, is at the south-east bureau with the
details:

--

University of Wisconsin graduate student Rajib Mitra faces eight years

in prison after being convicted of intentionally jamming public safety
radio communications. The 25-year-old Mitra was sentenced by a federal judge as a domestic terrorist under the Patriot Act which punishes substantial disruption of a critical public infrastructure.

The computer science student converted a radio receiver to transmit tones that interfered with the 800 MHz emergency radio system used by Madison police, fire and paramedics. In all, Mitra was accused of interfering with public safety communications 37 times last year. He told a federal judge the incidents were accidental--the result of a loose wire. But the judge likened that to a fairy tale, and increased
Mitra's sentence for perjury. The disruptions happened between January and October, 2003.

Assistant U-S Attorney Tim O'Shea says Mitra's crime stems more from immaturity than ideology. O'Shea says the case was about domestic terrorism, not like what happened in New York City September 11th 2001, but by the immaturity of the defendant.

Testimony included reports about disruptions that prevented police officers from communicating with each other while making arrests, keeping paramedics from getting patient information to hospital staffs
and decreased safety for firefighters while on calls.

In one incident, Mitra was accused of interfering with communications for three hours on Halloween night. He was also convicted of downloading pornographic sounds from the Internet and broadcasting them over police channels.

Mitra could have been sentenced to two years in prison. He also faces
three years probation and has been ordered to pay more than 6-thousand
dollars to the Madison Police Department.

>From the South-East bureau in Birmingham, Alabama, I'm David Black, KB4KCH, for the Amateur Radio Newsline.

--

Its not known if the government will use Mitra's conviction under the
Patriot Act as the basis of prosecution of others acused of the same type of crime. (ARNewsline(tm) from Capital Times, others)

**

ENFORCEMENT: RESTERAUNT FINED $10,000 FOR USING 2 METERS

Remember the case of Best Wok? The New Jersey resteraunt that was warned by the FCC to stop using an illegal high power 2 meter

cordless
telephone to coordinate deliveries but which continued to do so
anyhow?

Well, that decision by the store manager is going to cost the company
$10,000. Thats the amount of the fine that the FCC has levvied
against Best Work for transmitting on 145.8376 MHz without Commission
authorization. The resteraunt was given the customary 30 days rto
pay
up or to file an appeal. (FCC)

**

ENFORCEMENT: RIGHT APPLICATION - WRONG BURTON

The FCC admits that it made a mistake when it announced that it had
sent a warning letter to a former California ham and designated his
GMRS radio service application for a hearing. What happened?
Amateur
Radio Newsline's Bruce Tennant, K6PZW, tries to sort it all out:

--

The FCC recently announced that it had sent another warning letter to
Richard A. Burton, the ex-WB6JAC. This, warning him about operating
without a license and designating his GMRS application for review.

Only one problem. The regulatory agency had the wrong Richard A.
Burton.

It turns out that it was a Richard A. Burton in another state who,
this time, applied for a GMRS license. It was not the Richard A.
Burton who lives in California.

Complicating thins further the California Richard A. Burton had filed
for a GMRS license over a year ago. He voluntarily rescinded his
application after the FCC set it aside for review.

So what happened? According to a note in the ARRL Letter, the FCC
was
acting on the belief that the latest GMRS application had come from
the California Richard A. Burton. And mistakenly, the regulatory
agency designated it for hearing.

For the Amateur Radio Newsline, I'm Bruce Tennnant, K6PZW, in Los
Angeles.

--

By the way, we did a search on the QRZ.com callsign supersite. We
found that there are 12 hams that have the name Richard Burton living
in North America. Of these one is a Richard A. Burton but he does
not
live anyplace near the Richard Burton who was seeking the GMRS

license. (ARRL, others)

**

ENFORCEMENT: TO MANY CALL SIGN CHANGES

The FCC is asking a New York, ham why he has filed over a dozen call sign change requests with the agency in the past four years. Since August 29, 2000, Kiyoshi L. Nakamura of Buffalo has held the call signs K3DJ, KJ6UZ, AD1L, K3DJ again, KH6DJ, AD1L again, K3DJ for a third time, AD2R, AD1L for a third time , AD2R, WH7S, AD1L for a forth
time and AD2R for a second time. And on May 4th, he again filed a call sign change request. This time he wants to give up AD2R and get back to K3DJ for the fourh time.

In its letter to Nakamura, the FCC says that his numerous call sign change applications raise questions about apparent abuse of the licensing system. This says the FCC that with limited exceptions, each call sign would be blocked by Commission rules from being reassigned to another licensee for two years.

So, the FCC gave Nakamura 20 days from the date of its inquiry letter to respond. He was told to state his intentions regarding the filing
of these applications. He was also told to coose one and only one call sign that he actually wants to keep. (FCC)

**

RADIO HONORS: AMATEUR RADIO MONTH IN NH

June is now Amateur Radio Month in New Hampshire. This, as Governor Craig Benson issues a proclamation honoring the states radio amateurs for their dedication and the service for its almost 100 year history of contributions to the advancement of communications technology.

First issued by the New Hampshire State Legislature in 1985, each succeeding Governor has recognized the role of the states Amateur Radio operators during the month of June. 2004 marks the 19th consecutive year that these proclamations have been issued. (Via e-mail)

**

TECHNOLOGY: IS IT BYE-BYE TO VHS?

Home recording using tape as a medium seems to be on its way out. According to the Consumer Electronics Association, in 2003, movie watchers rented more DVDs than VHS tapes. Also, DVD sales increased by 30% while the sale of VHS VCR's dropped by an unexpected 50% in
2003.

Whats replacing the venerable VHS system? Hard disk recorders like TIVO which have been dropping in price over the last twelve months. When combined with satellite or cable TV, these devices make delaying a program to watch later as easy as 1-2-3. (Science OnLine)

**

THE SOCIAL CIRCUIT: HAM-COM IN DALLAS TEXAS IN JUNE

Turning to the ham radio social calander, if you will be in the Dallas., Texas area the weekend of June 18th and 19th, make it a point to attend Ham-Com 2004. This is the ARRL West Gulf Convention held at the Arlington Convention Center in the Dallas suburb of Arlington. This years features include indoor and outdoor flea markets, numerous commercial exhibits, a D-X luncheon, an APRS workshop and much more.

Information on this one is on line at www.hamcom.org or by writing to Ham-Com 2004. P.O. Box 12774, Dallas, Texas, 75225. The phone and fax number is area code 214-361-7574 (Ham-Com)

**

THE SOCIAL CIRCUIT: KNOXVIOLLE TN. IN JUNE

And the 38th annual Knoxville Hamfest and Electronics Exposition is slated for June 11th and 12th. The venue is the Knoxville Exhibition, World's Fair Park in Knoxville, Tennessee. The theme this year for the event is "Promoting Youth in Amateur Radio." More information is on-line at www.w4bbb.org (K4PZT)

**

THE SOCIAL CIRCUIT: A TALE OF HAM RADIO AT NAB

Also, if you want to read more about ham radio at the recent National Association of Broadcasters Convention in Las Vegas, take your web browser over to www.haleisner.com. Then click on the column titled "The Other Side of the Control Room Glass" by our own Bill Pasternak, WA6ITF. This month Bill not only takes reads to the N-A-B show but also tells of his recent exploits at the Dayton Hamvention. Again, its all on-line at www.haleisner.com (ARNewsline(tm))

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to

the
world from our only official website at www.arnewsline.org and being
relayed by the volunteer services of the following radio amateur:

RADIO LAW: FREQUENCY COORDINATION FOR THE 2004 NATIONAL POLITICAL
CONVENTIONS

Remember a few years ago when the ARRL became the FCC's
"single Point
of Contact" or spoc on repeater related matters? Well how about
one
for this years political conventions? Well that honor has gone to a
New York based consulting engineer. Bill Pasternak, WA6ITF, has more:

--

At the request of the Frequency Coordinating Committee for the 2004
Political Conventions the FCC has designated Louis Libin, as the
single point of contact -- or spoc -- for coordinating broadcast R-F
operations. This, under Section 74.24 of the agency's Rules.

Libin will oversee all RF operations for broadcasters in Boston from
July 26th through July 29th and in New York City from August 30th
through September 2nd. Nor is this the first time for him to do so
either. Louis Libin is considered one of the worlds foremost
authorities in the area of RF compatibility and has worked on
numerous
televised events over the years.

For the Amateur Rafio Newsline, I'm Bill Pasternak, WA6ITF, in
Los
Angeles.

RADIO LAW: 811 PROPOSED AS A NATIONWIDE CALL-BEFORE-DIGGING NUMBER

The FCC is asking for comments on a proposal to adopt "811" as a
nationwide call-before-digging number. The regulatory agency
believes
that this will give excavators one simple number to call to avoid
cutting buried cables, gas lines and other important infrastructure.

Currently there are 70 nationwide "One Call" centers that serve
different geographic areas. They are generally accessed by dialing

toll-free or local telephone numbers. The FCC however believes that having one simple number to call like 811 should promote safety and lead to fewer utility outages.

Want to know more? It's all on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-247171A1.doc (CGC)

**

RADIO LAW: COURT UPHOLDS CABLE RULING

Meantime, the FCC is considering a Supreme Court appeal in cable Internet access dispute. This, after a federal appeals court says that it is standing by its October ruling that cable TV operators should open their lines to rivals who also want to use them to sell high-speed Internet service.

The Federal Communications Commission asked the 9th U.S. Circuit Court
of Appeals to revisit the decision, but the court declined to do. If upheld, the circuit's decision would likely subject cable operators to
the same rules as local phone companies, who are forced to lease their
lines to rival providers of phone service and D-S-L Internet access. (Published reports)

**

WORLDBEAT-UK: 2004 AMSAT COLLOQUIUM IN THE UK

Turning to news from around the world, the 2004 AMSAT-UK Colloquium will be held on Friday, July 30th through Sunday, August 1. This, at
the University of Surrey, Guildford, United Kingdom.

A feature of this year's meeting will be a talk and Question and Answer session with Professor Colin Pilinger of the Beagle 2 project. More information is on-line at www.uk.amsat.org. (AMSAT-UK)

**

WORLDBEAT-ALBANIA: TIRANA ALBANIA FOR DX'ERS IN JUNE

And Albania's first ever DX Convention, is scheduled for 19th to the
20th of June in the city Tirana. Attendees will get to meet many figures from the DX community who donated equipment to put Albania on the air. This includes G3LQP, W6UM, OH2BH and T93Y. United States Amateurs should contact K2WR, at k2wr@njdxa.org for advice how to travel to this gathering. (Via e-mail)

**

ON THE AIR: FRENCH RULES CHANGE SPAWNS DX OPERATION

FT1ZL is on Amsterdam Island and is expected to become active soon. This, after the French have change their licensing structure to grant holders of that nations VHF only license operating privileges on the High Frequency bands.

French stations with the numeral 1 or 4 in their prefix can now operate the low bands using all modes except A1A, A2A, F1A and F2A. FT1ZL will use his new found privileges on 20, 17, 15, 12 and 10 meters SSB during his Amsterdam Island stay. (Internet)

**

DX

In D-X, IK4RUX says that he plans to operate portable IF1 from Favignana. He will be found on SSB and C-W from the June 19 to the 26
th. QSL this operation direct or via the ARI Bureau. (GB2RS)

And K8AQM reports that his upcoming trip to Samoa will take place July
7th to the 21st. He will operate as 5WZ0TR from the Samoan Village Resort on 160 though 10 meters. Modes will be CW, SSB, RTTY and PSK. All QSLs are via K8AA at his callbook address. (OPDX)

**

THAT FINAL ITEM: BANNED BY ONE WORD

And finally this week, the tale of why hams in Thailand were not allowed to talk to hams in other parts of the world for a number of years. The truth be known, it was all because of a three letter word. Here's Q-News Graham Kemp. VK4BB, with the rest of the story:

--

Audio report only. No text available. Lisen on-line at www.arnewsline.org/

--

And for those of you who do not speak French, the word oui -- sometimes pronounced as the English word "we" -- means "yes."

## 1375. Need Antenna Help

Newsgroup: rec.radio.broadcasting
Date: 2004-06-05 21:59:58 UTC
From: sheellah@aol.com
Message-ID: <c9tfou$gbe$1@xuxa.iecc.com>
Source record: 5015

I'm trying to get 1110 AM in Manhattan, and have terrible reception due to all the surrounding concrete. I've just ordered the Super Radio by GE, and would like to know if the Terk ADVANTAGE AM Advantage Antenna would help. The radio has 2 screws on the back for an antenna, but this one I think doesn't need to be attached. I can get some channels with my regular radio by placing it near the window. I would sure appreciate any help. Thanks much!

# 1376. MT BACK-ISSUES

I'm trying to pull in 1110 AM in NYC, the Coast To Coast show, and just ordered the GE super radio. I'm in Manhattan, and surrounded by a lot of concrete. Bedides the radio, I was looking at the Terk antennas.
Would the Advantage model work?

http://www.buy.com/retail/product.asp?sku=90120327&loc=111&sp=1

I'm able to pull in some stronger stations if I place my current radio next to the window, but the AM reception is mosty static. The Super Radio has 2 screws I think for an antenna, but the one above doesn't have to be attached. Anything for less money out there? Thanks!

> I was looking at the Terk antennas.
> Would the Advantage model work?

Any good tunable loop should help significantly, but in a EM-noisy environment, nothing can eliminate all the static.

FWIW, the Terk Advantage is the only antenna Tivoli Audio recommends specifically <http://tivoliaudio.com/faq.htm#q12> for improving AM reception on their Model One radios. I find the now-discontinued Radio Shack loop antenna to be very helpful in the noisy Faraday cage (an apartment in a stucco building covered with aluminum siding with mercury vapor lights mounted on the front of the building) I live in.

I'm selling my entire archive of Stern shows. MP3's will be burned
onto DVD-ROM's (around 6).
Email me for a complete show list or with any questions. I am a
"Premier" Paypal member with over 400 successful transactions logged.
Free shipping in the states, and I'll accept various payment methods.
The MP3 quality is good overall, but great since March '04 since these
may be the final open-air shows. (Archive will be up-to-date at the
time of shipping.) Asking $60. Drop me a line!

# 1386. RDS receiver and PC

Newsgroup: rec.radio.broadcasting
Date: 2004-06-07 15:14:58 UTC
From: temp@vhfdx.net
Message-ID: <ca20pi$6pv$1@xuxa.iecc.com>
Source record: 5026

I am looking for either a PC card radio receiver or an external FM receiver which can be connected to the computer in order to process the RDS data, specially the station ID.

I am involved in a project for automatic detection of propagation conditions on the VHF bands and what I need is a receiver that can be fully controlled by the computer, scanning continuosly, identifying the stations received, and logging them in a database for later analysis.

I'm a software developer, so I'll make any required programming in the PC, but the problem is I can't find any reference to a receiver which fits my needs (interface with PC and RDS compatible). Can someone help me?

Thanks. Gabriel.

Try a long wire hung out the window. It'll probably buy you more than most
of the cheap active antennas. Unfortunately if your problems are interference
related, they'll be worse too. But a quarter's worth of magnet wire and you
can find out without spending a lot of cash.

Back in the, um, good old days of analog tuners, many stations
'rounded' their frequencies. On an analog tuner you could hardly tell
the difference between 1500 and 1510. An FM station where I live went
by the phrase 'Great 98', although the frequency was 97.9.

When digital tuners showed up all the stations changed their strategy
and started referring to the precise frequency where they were
located.

I believe WMC FM still has prisms as the main source of processing... and even with all the mpeg compression the station still sounds better than more... pre music on disk it sounded wonderful...

It wont matter what processing you use if you are feeding garbage into your control board.

>
Lee, got an MP3 player in your car?

Pick your favorite genre station from http://www.bbc.co.uk/radio and use
Total Recorder from http://www.highcriteria.com/ to record BBC's great
programming while you're at work or sleep. The new version of Total
Recorder will even split continuous recording up into X minute MP3 files,
on the fly, into smaller files. Copy them to your MP3 player, like my 20GB
Archos Studio 20 hard drive MP3 player and play them in the car, at the
beach or at the office.

Screw commercial radio and its incessant grinding you into the ground with
little programming.....

No connections to hook up the player where you want to play? Go to Radio
Shack and get an Irock FM transmitter, made for Apple's Ipod player. It
will play any headphone audio over your FM stereo on 88.1, 88.3, 88.5 or
88.7 Mhz in a local dead channel. My Irock will transmit to the entire

house LIVE plugged into the soundcard audio output of the computer on any stream like BBC.

You don't need to be a slave to the noise on AM and FM......

Larry

> --scott

Clear channel stations have a 'gap' in coverage at night. I was in Atlantic City, NJ a few weeks ago and noticed NYC stations come in lousy at night. The same stations come in much better in, say, Baltimore, which is further away.

Here's why: An AM station at night has a 'ground wave' signal. This is the strong local signal you get near the antenna source. There is also the distant-reception 'skywave' signal. This is from the signal bouncing off the upper atmosphere and coming back down to the ground.

There is a doughnut-shaped gap in between these 2. The skywave signal has to go into the upper atmosphere and bounce down. Even at the most severe angle possible, the skywave signal doesn't come into play until you are a certain distance from the antenna source (not enough of an expert to know what this distance is, but you get the idea).

So, from where the ground-wave local signal fades out, to where the skywave signal first shows up, is the gap, with poor reception of the station's signal. Clearly Atlantic City, NJ, is in the gap for NYC clear channels.

I live in Columbia, SC, and can barely get WBT (Charlotte, 70 miles away) at night. Go around 100 miles or so further south and it comes in pretty well (when I lived in south Florida I used to get it regularly). Same principle in action.

Of course other posters have pointed out that this show was broadcast during the day, so this is irrelevant (but interesting info, IMHO).

If you owned WINS, you would also own WCBS, and WFAN, and Stern's
station, and a number of other very powerful stations around the
country.

Also the CBS and UPN TV networks, and Paramount studios, and a huge
billboard company, etc., etc.

In short, you'd be Sumner Redstone, biggest shareholder in Viacom, one
of the richest people in the world. And you probably wouldn't care
much about anything posted in a newsgroup.

Of course, anyone can be a (very small minority) owner of all this.
Just buy some Viacom stock.

I suspect that Rich knew that already.

Not exactly true. The "gap" is actually the cancellation zone where the
skywave and the groundwave come in, but at enough of a time difference to
cause effects commonly thought of as fading, fluttering, etc.

> and started referring to the precise frequency where they were
> located.

Actually, the reason stations changed to precise dial position imaging is
because, as digital dials increased in availability, stations saw that
precise postions were what was being written down by Arbitron diarykeepers.
In addtion, exact postion is a 100% foolproof credit; a rounded postion can
throw diary entries into ascription. Thus, exact frequency on-air mentions.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform
involves all different kinds of music, including jazz, reggae, blues,
hip-hop, country, rock, and just about everything else under the sun.
Instead of telling our DJs what to play, we allow them to select their
own recordings from our vast and unique library. It is their
responsibility to mix together many different kinds of music in an

intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

Absolutely - but Howard has said openly on the air that he will never prosecute anyone for trading / selling copies of his radio show, nor will he ever be able to offer the same type of service to his fans.

Want to buy:

(The "Radio Crazy" is in "reverse" now)!!! HI!

I want to buy a cheap "dog" AM radio station. Any
location considered. Ideally seller financed with
little or no money down. Prefer fulltime and
non-directional with favorite being good old class IV
(now called "C" by FCC)AM.

Need not be profitable. Prefer with real estate but
that is not a must.

Again I am not looking to buy WLS, I am looking for a
sick "Dog"!!!

Finders fee will be paid to anyone telling me about a
station if that station is actually purchased. The fee
can be in cash at closing or a percentage of the
station, your choice.

Tel: (478)741-1710 in Macon, GA

I am a semi-retired radio engineer. Last job in radio
was Chief Engineer for a 5 KW fulltime directional AM
in New York City.

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

>but Howard has said openly on the air that he will never prosecute anyone for trading / selling copies of his radio show, nor will he ever be able to offer the same type of service to his fans.<

Unless he owns the show outright, including all broadcast and reproduction rights, it's not his call to make, and Infinity certainly can prosecute those who distribute copies.

O.K. here we go:

1. "Styrofoam is bio-degradable" (Said by a national talk show host in "rebuttal" to those who call for a ban on the use of styrofoam packaging because the stuff ends up along the roadside and in peoples' yards- mainly because the industry refuses to take meaningful steps to promote recycling.) The host may have been paid for promoting the use of styrofoam by lying about its properties.

2. "Dioxin is NOT a health hazzard!" (Yeh, sure! Neither is breathing asbestos!)

3. In defense of S.U.Vs: "Detroit is now making fuel-efficient S.U.V.s" (Yeh, sure! )

4. Just after the Rhode Island night club fire that killed all those people-in reply to a caller: "Sir, that night club HAD MET ALL LOCAL FIRE SAFETY CODES!"

5. "There is nothing that you or I eat that is on the endangered species list!" (Yeh, sure- except Cutthroat trout, sturgeon, sockeye salmon, key deer, oyster mussel and a few hundred others!)

6. "50% of our oil comes from Saudi Arabia." (The correct answer is 17%)

7. "Half the price you pay for a new car from Detroit goes to pay for the health care plan of auto workers!" (yeh, sure!)

LOTS MORE TO COME. Talk radio is saturated with lies!

Despite your cuteness, in case you haven't read, some independent
interpretations of trends show that Franken is *beating* Limbaugh in
New York and in the Chicago market before AA was pulled by
Multi-Cultural, the audience doubled to a 2.0, which may not be much
compared to WLS but is still better than *either* sports talk station
in town and in the neighborhood of the mid-rank numbers NPR station
WBEZ gets.

It's too early to tell, but Air America may just succeed despite all
of their bumbling.

Or, he simply may be stupid or just uninformed. I have not seen much of a
styrofoam lobby out there.
>
> 2. "Dioxin is NOT a health hazzard!" (Yeh, sure! Neither is
> breathing asbestos!)

Stupid. Talk hosts are hired for entertainment value, not knowledge (witness
Dr. Laura, a physiotherapist).
>
> 3. In defense of S.U.Vs: "Detroit is now making fuel-efficient
> S.U.V.s" (Yeh, sure! )

They are. There are several hybrid SUVs in pre-production stages.
>
> 4. Just after the Rhode Island night club fire that killed all those
> people-in reply to a caller: "Sir, that night club HAD MET ALL LOCAL
> FIRE SAFETY CODES!"

As to the building, apparently they had. The issue was with the pyrotecnics
of the band.
>
> 5. "There is nothing that you or I eat that is on the endangered
> species list!" (Yeh, sure- except Cutthroat trout, sturgeon, sockeye

None of which have I eaten, now or ever. "You and I" could easily mean that
very few of us dine on sturtgeoun, venison, etc.
>
> 6. "50% of our oil comes from Saudi Arabia." (The correct answer is
> 17%)

Stupidity, not necessarily a lie. Most of the US' oil comes form domestic
sources, Canada, and Latin America.

> 7. "Half the price you pay for a new car from Detroit goes to pay for
> the health care plan of auto workers!" (yeh, sure!)

Wrong, but not that far off. A huge percentage goes to fund pensions and health care for present and past workers.
>
> LOTS MORE TO COME. Talk radio is saturated with lies!

Or, simply, stupid hosts engaged in discussions on subjects they are not fully informed on.

You are making too much out of small issues.
>

# 1417. Fair Use in a Talk Show

Newsgroup: rec.radio.broadcasting
Date: 2004-06-10 02:03:11 UTC
From: OIE <beek@bbbbbb.com>
Message-ID: <ca8fgv$no$1@xuxa.iecc.com>
Source record: 4906

There were some great answers to my last question about ads on radio, so I figured I would throw out another question and hope for the same :)

I'd like to create an audio talk show on the internet. Can I use any audio from other talk shows, from news shows, and so on? Can I read directly from web pages since they are publicly available? Not that I would only rip stuff off, but say I wanted to play a clip of something on someone else's show, or from the news, and then comment on it. Does everything basically need permission? And would that mean paying royalties, which I'm not going to do? Just a basic FAQ on this sort of thing would be great. I've searched for a while and all I seem to find is "fair use" on downloading mp3s (don't care) and on using published works in university classrooms (which isn't a public thing like a talk show). Any information you could give would be appreciated. Thanks!

OIE

## 1418. What's currently your favorite radio station and why?

Actually, there were fire code violations. The most important of these
was that the stage walls had been lined with flammable packing foam as
a cheap form of sound insulation. Definitely against fire code; problem
is, the local fire inspector didn't notice it on the last inspection he
did there.

To bring this marginally back on topic... Among the many parties
being sued is a radio station which gave away tickets to the show.
(Never underestimate the ability of lawyers to go fishing after the
deepest pockets they can find...)

There are no clear channel stations, anymore. However, your
explanation of skywaves vs. ground is a good one.

Rich

>

Playing actualities from someone else's copyrighted show is not a good idea legally. You can discuss what was said, quote it in context even, but I certainly wouldn't be playing a tape of it. On one hand, the chance of someone other than your close circle of friends ever hearing an Internet talk show is slim, so the chance of some representative of the show you want to use hearing it are equally slim. But slim is not none, and weasels and lawyers are constantly looking for someone to sue so they can continue to get their BMW's detailed weekly.

BTW, the best commentary comes from passionate personal beliefs, not critisim of what someone else said or did elsewhere. That's just critisism and that's pretty boring to listen to.

G'day from Downunder

IBOC has been going in the US for some time now.

Is it as good as the people at iBiquity said it was?

Does it sound any better than FM stereo or AM stereo?

Are receivers easy to buy?

How is AM stereo doing in the US?

I believe the three-hour Power Hour...

http://www.thepowerhour.com/

...allows rebroadcast, even encourages it. I think it's on a barter system. You leave in their ads.

Other similar shortwave/Internet/satellite broadcasters may do the same.

Best wishes,
Bill in SE Texas

The only "independent interpretation of trends" that matter are those
that are accepted by ad agencies, especially in the network business.

To my knowledge, there are none, especially ones that break out
hour-by-hour figures.

IBOC FM is a mixed bag. It doesn't sound all that wonderful, but again
I think most of the FM sound quality issues have to do with overprocessing
more than anything else, and digital transmission doesn't do anything about
that.

IBOC AM sounds pretty awful to my ears. Much worse than good wideband AM
transmission with a good receiver (which is something hardly anyone here
will ever get a chance to hear, I am sorry to say).

>Are receivers easy to buy?

No. Typical consumers don't even know they exist.

Slightly worse than analog FM, depending on how the analog is
processed. It can be better than a badly processed analog signal.
The AM is very artifacty, significantly degrades the fidelity of the
analog signal, and creates significant adjacent channel interference
problems. For the latter reason, its use is forbidden at night.

>Are receivers easy to buy?

No. AFAIK none are widely available.

>How is AM stereo doing in the US?

Just about dead. Few receivers available except for some OEM car
radios, fewer and fewer stations broadcasting it.

# 1431. Question about Ferrite Antennas

Newsgroup: rec.radio.broadcasting
Date: 2004-06-11 16:29:47 UTC
From: lsmyer <myer413ny@hotmail.com>
Message-ID: <cacmlr$258$1@xuxa.iecc.com>
Source record: 4921

I enjoy AM dxing, and I've noticed that the radios with larger ferrite rods seem to be better for dxing than those with small ones.

I did some research on the subject, and I kept running into terms such q-factor and flux. My 45-year-old mind only has room for so much, and I'm afraid that anything I try to learn about electronic theory will just push out some of the more important stuff already stored in there such as anniversary dates and current wife's name.

So maybe somebody can answer a couple of questions for me in simple English, and maybe help me save what few brain cells I still have left.

1) Is there an optimal length for an internal ferrite antenna?

2) If so, then why don't all radios have one that size?

3) Is ferrite expensive or something?

4) How can my little Degen 1102 (tiny ferrite antenna) do so well on MW while my ATS505 does so poorly?

Thank you in advance for all who reply.

XM4 XM73 Wide selection of music from the best-ever era of popular music -
and with no commercials. Only available on sat radio.

XM131 BBC World Service, but only for the top-of-the-hour news.
XM214 Local Traffic and weather 24/7 without interruption.

What is that FM/AM stuff you mentioned?

I am "in the building" with one of these, and on the available receivers, FM
IBOC has definite advantages, one you realize you are hearing audio without
the preemphasis curve we are used to hearing on FM. That done, it sounds
better to everyone who has heard real-world music programming on it.
>

While it will take time to enter the market, the sound of AM IBOC now is
very, very good. When running music on the one of these that is also in the
building, it sounds better than some local FMs.

# 1435. Sangean U1 arrived today

Newsgroup: rec.radio.broadcasting
Date: 2004-06-11 16:29:52 UTC
From: lsmyer <myer413ny@hotmail.com>
Message-ID: <cacmm0$27c$1@xuxa.iecc.com>
Source record: 4925
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave

I got one of the new Sangean U1 utility radios. First impression: BIG, yellow, black, solid. Did I mention "BIG?"

The radio is built well. It is shock resistant (they claim it survives a six-foot drop without injury) and water resistant up to JIS 4 standard (whatever that means). It weighs several hundred pounds and it causes my floor to sag when I set it down (well, maybe a little hyperbole there). Despite its heft, the radio is really easy to carry around, thanks to a soft rubber grip inside its hard plastic handle. The radio has a six-foot heavy duty power cord inside the back, or it can be operated on 9-14 Volt DC, or with 6 D-cell batteries.

The radio has very nice sound. Bass is very solid and substantial (much like the radio itself). Comparing its sound to that of my SRIII and BCL2000 (all on batteries), the U1 has by far the most bass, the SRIII distant second, and the BCL2000 distant last. On treble, though, the SRIII has the most, the BCL2000 second, and the U1 the least. When I turned up the radios, the BCL2000 and the SRIII started distorting pretty soon, but the U1 just kept getting louder and richer as I cranked it up. The radio truly fills up a room without working up a sweat. I love the sound of the U1, but some people might like more treble. Sound quality is arbitrary. This one happens to suit me best.

AM Sensitivity: Since my home is so full of RF, I took my new radio out into the country to test its AM sensitivity away from power lines. (I wish I had taken some other portables for comparison, but I forgot to). Wow, I was totally impressed! I have an excellent car radio, and the U1 picked up nearly every AM station that my car did! To the best of my knowledge, none of my other radios could have gotten some of the stations I was getting. One example, the radio was easily able to separate 840 WHAS (Louisville) and 850 WUTK (Knoxville). Both stations came in clear and strong and there was even some space between them. The U1 was very quiet. I turned it up very loud on AM, and there was no noticeable internal noise between stations (thanks in part to its analog tuning). One thing I did notice, though... the U1's AGC is not strong. Weak stations were lower in volume than stronger ones. My car radio has strong AGC, and it pulls the sound of weaker stations up to that of the stronger ones. This isn't a criticism of the U1. It's just an observation. The weaker stations were there, and it was very easy to turn up the radio to hear them, especially since the U1 has so little internally-generated noise, and so much available volume to spare.

FM Sensitivity: I came home and tried the U1 against the SRIII and BCL2000 on FM, extending the whips on each (the U1 doesn't have a whip, just a 5-inch flexible "duckie" antenna that looks like it might sit atop a police

scanner). The U1 kept up with the BCL2000, both picking up distant stations equally well. The SRIII was much lower in FM sensitivity. The U1 slightly beat the BCL2000 in rejecting noise on FM. The SRIII was very noisy. Overall, the U1 seemed to be the best of the three on FM sensitivity, but the SRIII and BCL2000 both have external FM antenna inputs and the U1 does not. This isn't a factor for me, because I never use an external antenna, but I offer it as an aside for anyone who does.

So I am very satisfied with my U1. I won't be taking it for long walks, nor will it be my nightstand radio. But the U1 will now be my personal workhorse radio that I will be using at the pool, on the patio, and while working in my shop. And maybe I'll sneak and do a little AM dxing on the side with it as well.

I'm not sure that this is exactly what you mean, but you did mention foreign stations... I'm assuming these are my favorites because I listen to them most. I should add that I am not much of a fan of domestic US commercial radio, which I find boring and narrow-minded. US public radio is ok--some programs are excellent--but it does have a tendency to sound rather homogenized at times.

1. Radio Australia (on shortwave & the internet) - because it gets most of its content from the domestic public network ABC Radio National, which to me is the finest "ideas" oriented network on the planet.

2. BBC Radio (Radio 4, available on the internet; and World Service, on sw, internet, satellite and local FM in some US cities) - because it's the BBC (need I say more?)

3. Radio Netherlands (on sw, satellite and the internet) - because it produces some of the finest radio documentaries in the world and usually presents a unique perspective on things unavailable elsewhere.

Hi,
I wonder if anyone can help.
In the UK prior to the arrival of Ofcom it was possible to go onto the
RA site ( I think )
and download a spreadsheet with the above title which gave details of
permanent
licensed broadcast stations on Medium Wave (MF), Band 2 FM (VHF) and
DAB (Digital) in the UK.
I is it possible to find and download an up-to-date version somewhere as
mine is
over a year old now ?
Thanks in anticipation,
Mike

BBC 2 - Music and entertainment

BBC 3 - Jazz, Arts and Dramas

BBC 4 - Talk radio, books, etc.

Why is easy......NO COMMERCIALS, NO DRUG COMPANIES, NO CAR COMPANIES, NO DITECH.COM, GEICO, STUPIDITY or 800 toll-free numbers for me to dial.

I emailed them offering to pay my share of the Radio Tax. They politely refused, thanking me and telling me it was the pleasure of the British people.

I also love the ON DEMAND of all the radio channels, allowing me to listen to WHAT I want, WHEN I want it.

Radio in America died years ago. Clear Channel can go to hell!

Larry

Okay, I'm usually pretty quick to take the opportunity to introduce others to my favorite radio operation...as my email handle suggests, I'm a huge fan of CBC Radio One, Canada's public broadcasting network, with a number of stations all over Canada and an impressively content-rich web presence with a number of those stations available on their website, at www.cbc.ca/audio.html.

As an American quite displeased with American radio (which even applies to non-commercial broadcasting, since the lack of government support has resulted in a loss of some of the more eccentric and esoteric programming on even the better-funded stations) CBC's take on current affairs, news, philosophy, entertainment and even sports has made it my primary source of information, although that's confined to home since there's no way except through the internet to get it. While I've listened to the BBC and NPR, CBC's programs manage to strike a balance between information and entertainment...the evening news program, As It Happens, being a prime example of how one can cover the news that matters, yet still have a wry sense of humor about it.

Entertainment programs, as well, don't take themselves very seriously...there's usually a self-deprecating quality about them that may well be part of the Canadian persona. And (a true blessing) these programs rarely engage in celebrity worship, and most of the trash news that makes up so much of American programming (Jacko goes Wacko, OJ's still looking for his wife's killer, Just What was that Stain on the Blue Dress?, Paris does...well, everyone) is just ignored...which leaves time to cover more important stuff (like, how much of rest of the world likes the United States' behavior these days....here's a hint....the Brits love us, but they're not sure) doesn't it?

And, with the exception of election periods (which amount to only a month every two years or so, when they have to run two or three minutes of political spots a day) they're absolutely commercial-free...not even "underwriting" announcements! There are also rumors that CBC programming may show up on the satellite radio provider, Sirius, as they've entered into an agreement with CBC to bring satellite radio to Canada. As I already have Sirius in the car (another reaction to my displeasure with what's available locally) this addition would be very much welcomed (As It Happens, by the way, is also on PRI World at 7pm ET weekdays, on Sirius channel 108).

When I'm away from my computer, I'll drop to the local NPR affiliate, WDUQ in Pittsburgh. They run This American Life (probably the best example on American radio of what CBC sounds like) as well as the other NPR news programs, Morning Edition, All in a Day and All Things Considered (a program which Susan Stamberg proposed to NPR after becoming a fan of As It Happens, but which ends up much drier and more earnest

in comparison to As It Happens). When WDUQ isn't airing NPR programming, they do jazz, which is not my favorite genre, but it usually is a lot less frantic than what else is on the radio. Again, News and Entertainment. And few commercials.

Finally, there's local, independent non-commercial WYEP in Pittsburgh. They're a bit uneven, as they have a number of volunteers for air talent, and they have a tendency, again, to do what everyone else is doing (can't afford to offend potential donors, after all), but every once in a while they'll play something really novel. They're quite connected to the community, as well.

So, summing up...the reason I listen to any of these is 1) to hear about the world around me, beyond my local awareness, and to be introduced to new ideas while getting some enjoyment from listening; 2) to hear about the people and places around me, to know what's going on that has a direct effect on my life; and 3) No (or few) commercials! Broadcasting has become far too greedy, now that the FCC has lifted the limit on (once 18 minutes/hour, which is still too much) commercial matter. The only unexpected result of my listening to Canadian radio is that I probably know more about what's going on in Toronto than I do in Pittsburgh. I'll probably move.

Wanted to buy: Dead or alive. Not Jesse James, you
friggin fruitloop! The "Radio Crazy" wants to buy a
"dog" AM radio station. Finder's fee paid to anyone
who tells me about one if I ACTUALLY buy the station.

Ideal AM would be a class IV (FCC calls it class "C",
you fruitloop!) with real estate. Station need not be
profitable. Prefer with seller financing with little
or no money down. I don't want "pure" daytimers and
would prefer to stay away from directional stations.
Fulltime is preferred but I will consider stations
with at least 50 watts at night as "fulltime".

Don't even waste your time or mine if they are asking
more than $150,000 (150 grand).

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"
aka Moron Gottesman
aka Maven Gottesman (ahhhhh....that is more like it!)

> 1) Is there an optimal length for an internal ferrite antenna?
Yes, based upon mechanical considerations. Ferrite is fragile, like ceramic,
and very long rods would easily break. Second consideration is the size of
the radio. There aren't too many large portable radios (other than boom
boxes).
>
> 2) If so, then why don't all radios have one that size?
Size of the radio, and whatever else is included inside it
>
> 3) Is ferrite expensive or something?
No, but it is fragile.

Most stations don't care today about anything except their home metro
groundwave coverage. Any damage in the secondary or skywave coverage areas
is irrelevant.

Favorite station is WGN, Chicago, IL. The reason for this selection is that the air personnel are very conversational. The programs are diversified. The morning show reaches out to ABC (they are an affiliate not an O & O) network staffers like Ann Compton at the White House and Sam Donaldson for personal one on one updates. You may find them talking to a governor or senator when needed to explain the importance of something. They are LOCAL and LIVE. They continually interact with the listeners via phones. And they still stream except when MLB makes them delete the Cubs broadcasts

Second would be WAKV, Otsego-Plainwell, MI. Somewhat local to me. Basically VT'd except the morning show. Almost everyone on the air there was an air personality in the nearby Kalamazoo, MI market. The station refers to itself as Vintage Radio as the music mix runs from the 40's to the 70's or so.

Sorry but the third is the CD collection in the car and at home. When I want to hear Beethoven, I want to hear Beethoven.

Not necessarily in order:

CBC Radio 1-990 Winnipeg, Manitoba. Relevant information, wry humo(u)r, not hitting listeners over the head with their opinions. Unfortunately they keep shutting down their AM transmitters in favo(u)r of FM; my Internet reception isn't very reliable so I have to settle for travel near (or north of) the border in the summer. In the winter the 990 transmitter in Winnipeg still puts a decent signal down here.

Incidentally, the CBC (text) website is an excellent example of what a news site should be..

WPLN-1430 Madison/Nashville, TN. NPR information programs. A station that provides information without slandering my values.

WORT-89.9 Madison, WI. You never know what you're going to hear next. They're as likely to slander my values from the left side as WLAC is to slander them from the right, but they'll make you think in the process, and toss some decent music in to the mix...

==========

The stations I actually *listen to* most are, in order:

- WPLN 1430
- WPLN-FM 90.3 (classical music to lull myself to sleep)
- WBUZ 102.9 (modern rock)

==========

If this question had been asked two months ago, I'd have added WOXY-97.7 Oxford, Ohio. "97-X" with a fantastic local modern rock format, including plenty of local Cincinnati/Dayton bands and more interesting out-of-town outfits. Unfortunately their Class A signal 30 miles from both Dayton and Cincinnati made them pretty hard to hear on many radios.

The Thursday before Dayton Hamvention was WOXY's last night on the air. There's still a modern rock station on 97.7 out of Oxford, but it's now satellite-fed and a cookie-cutter copy of WXEG.

I blame my failure in the Dayton CW Contest on WOXY's demise. <grin>, kinda.

>Actually, I meant more along the lines of news. Is it even illegal to
>replay short clips? Probably so, just making sure.

Radio stations pay networks with commercial inventory to use those actualities.Lots of inventory. I don't believe you'll find there's any "fair use" application in a one minute news clip that's been edited by the network and paid for by the stations.

Under no circumstances, short of getting permission, can you use the voice of any network personality unless you want to pay them a hefty fee. You're in very dangerous water.

Rich

As an employee of one of several AM station owners, including CCU and
Disney, involved in a battle over interference from stations in
Northern Mexico, I beg to differ. We care a lot, and have joined in
legal action to protect our signal.

There is also some evidence that IBOC interference can affect home
metro groundwave coverage of adjacent channel stations.

Between the cubans and the mexicans, I can't get WLS reliably here in Charlotte at night. I also have trouble with a lot of the locals. (I don't know if they are flea power at night or what, but there is almost nothing on the band (other than WBT) that seems to come in clearly at night.

<sigh>

I dread seeing what IBOC will do to the local scene.. will get even worse.

> metro groundwave coverage of adjacent channel stations.

But not much. I can listen to the 1050 in the Riverside market within 10
miles of the KTNQ 50 kw IBOC site.

Maybe not to the listeners who live in such areas?

There are areas where all nighttime AM service is secondary - where no AM station provides primary service. My location is nearly one of them; the only station providing primary nighttime AM service is WSM. It is not difficult to find a place in Tennessee beyond WSM's primary coverage where there is *no* nighttime primary service - my guess is several hundred thousand people in Tennessee alone live in such areas.

Certainly these people aren't a majority, but there are a *bunch* of them out there - and they have Congressmen. Will these people complain to their representatives when their AM service disappears? Or is AM so irrelevant to most listeners that they won't care - or even notice?

Yeah, but Riverside is in KTNQ's null - where their day pattern has the
equivalent of about 6kW, NOT 50kW. The KTNQ day pattern runs 6kW or less
over most of the ESE quadrant. They have far less toward Riverside at night.
And Riverside is in the max of 1050's day pattern.

Presumably the 1020 IBOC pattern is proportional to the main signal's
pattern.

30 kHz spacing and 6 kW doesn't sound like a severe test to me.

# 1457. Urgent plea for help - ancient phone hybrid

Newsgroup: rec.radio.broadcasting
Date: 2004-06-15 00:21:04 UTC
From: Bill Fredette <bill@fredettefamily.com>
Message-ID: <calfdg$kol$1@xuxa.iecc.com>
Source record: 4947

Hello. Without going into exhaustive detail, I find myself saddled with a really old "telephone equalizer," no manual and a group of people that want me to make it work for them. So I'm hoping someone here would be willing to venture an opinion/offer some guidance.

The unit is a Russco Electronics Model T212 Telephone Equalizer. As far as I can gather, Russco is long gone, and I can find no documentation on line. The group hopes to use the unit as a phone hybrid.

The back of the unit just has a terminal strip. Here's the layout (X indicates a screw):

```
---1---- ----2---- HOLD LINE ---A--- ---B---
X X X X X X X X X X X X X X X X X X X X
NO C NC G NO C NC Coil +18 G - G + - G +
```

The front panel has a "line" switch with "in" and "out" positions, an "in/out" switch for three equalizer pots (LO MID HI) and an "in/out" switch for "HI BOOST."

Now I have no idea if the unit can even be used as a hybrid, but am hoping that someone here might have some insight. The date for using this thing is June 19. If you can offer any help, I'd really appreciate it!

Also, in case the ASCII art above doesn't translate, I've put some pics at www.84dragons.com

Thanks,

Bill Fredette

I certainly hope so, since they are 30 kHz apart. But there is a real
problem with first-adjacent channel interference. I reference a
statement submitted by Clear Channel SVP/Engineering Jeff Littlejohn
to the National Radio Systems Committee regarding a test involving
WTOP, Washington (1500) and WARK, Hagerstown, MD (1490). Daytime
interference from WTOP's digital signal was found to be "significant"
at WARK's protected 0.50 mV/M contour, and "noticeable" at its 0.75
mV/M contour.

I've used a Sompletech 128MB MMC card in my RADIOYourWay recorder for a couple of months. It just quit working.

The recorder shows CARD time remaining of 17+ hours, but will not record, either from program or from the record button. Internal memory works fine.

Have I zapped the card or the player? If I've zapped the card, is there a way to salvage it?

Thanks,

Dick

Run that by me again? You shouldn't hear any pre-emphasis curve on normal
FM. That's what de-emphasis is for.

And anyway, typical station EQ is far more radical than the emphasis curve,
I am sorry to say. The processing at typical stations is much more of a
sonic limitation than the transmission process.

## 1461. Comparison of six portable radios

Newsgroup: rec.radio.broadcasting
Date: 2004-06-15 00:21:08 UTC
From: lsmyer <myer413ny@hotmail.com>
Message-ID: <calfdk$kr4$1@xuxa.iecc.com>
Source record: 4950

I decided to test some radios today to see which of them I would recommend for simple AM dxing to anyone who asked. The six radios I tested are Degen DE1102, GE SRIII, Radio Shack DX-398, Radio Shack DX-402, Sangean U1, and Tecsun BCL2000.

I went to a local park at 1:00 pm and found an area with no nearby power lines. I started each radio at 530 KHz and I tuned up through the entire dial, noting the signal strength and clarity of what I heard (if anything) on each frequency. I also rotated each radio on each frequency to see if it could pick up a signal in any position.

Sensitivity: Despite being the least expensive out of the group, my trusty SRIII picked up at least a whisper of a station on nearly every single frequency (A+). Second was the BCL2000 (A-), third was the DE1102 (B+), fourth was my DX-398 (C-) and DX-402 (C-), and in last place was my U1 (F), which picked up stations on the least number of frequencies.

Selectivity: There are other factors in AM listenability, though. One of which is handling adjacent channel spatter. Of all the radios, the SRIII seemed to be best at pulling 700WLW (175 miles away) out of the spatter of two local stations on 680 and 710. The DE1102 was second, and the BCL2000 third. One oddity about the BCL2000, even though it allowed me to hear WLW between the two other stations, for some reason, WLW was being covered by an image of a local low power travel station on 1610 that overmodulates horribly. None of the other radios picked up any images.

Internal noise: No surprise here. The three analog radios, the SRIII (A+), BCL2000 (A+) and U1(A+), all had lower internal noise than the three with digital tuning, DX-402 (C) DX-398 (C-), and DE1102 (D).

Dial readability: All of those with digital displays were obviously easier to read. The DX-402 (A+) and the BCL2000 (A+) have accurate and large high-contrast displays, the DX-398 (B) and the DE1102 (C) were smaller but still accurate, the UI isn't very accurate but it's easy to see (C-), and the SRIII has the least accurate and least seeable display of the pack (F).

Portability: All six are portables and can be operated by batteries. The three large analog radios can be heavy, but all three have good carrying handles. The three smaller radios do not have handles. The DE1102 stands out here for being the smallest by far (A+). The U1, however, is really too big to carry for very long, despite having the best handle of the bunch, and it should get the F in this category.

Sound quality: Though highly subjective, I like the sound of the three bigger radios best. You can turn up the U1 until your ears hurt and it still doesn't distort. The U1 has by far the most bass and volume but little

treble (A), the SRIII has good bass and treble and medium volume (B), the BCL2000 has slightly less bass and treble, and comparable volume (B-), the DX-398 (D) and DX-402 (D) are virtually identical with some bass some treble and even less volume (D), and the DE1102 (D-) has some treble, no bass, and very little volume until it starts distorting. Of course, all of these radios sound better with headphones, but that wasn't what I was seeking.

Conclusion: I couldn't imagine getting rid of any of these radios. It would be so tough to try to pick just one for me to own. Each one of these has at least one feature that makes it a favorite in some category. And my little comparison doesn't even take into account two of the most important categories to some people: memory operation and external antenna performance. But of my six radios tested, three were clearly losers (DX-398, DX-402, and U1) and three were clearly winners (SRIII, BCL2000, and DE1102).

Of the three winners, the SRIII is the most sensitive, has very good sound, is noise-free, and is the least expensive, but the radio's display is so bad that serious dxing is virtually impossible for me without another radio nearby to tell me what frequency I'm listening to. The DE1102 and the BCL2000 aren't too far behind the SRIII in sensitivity and both offer a digital frequency display that's easy to see. And though the DE1102 is a fine little radio (in fact, it is an incredible performer for its size), the BCL2000 beats it in nearly every category for me (sensitivity, sound quality, internal noise), so I would have to pick the BCL2000 as my unscientifically-preferred choice for AM dxing.

Remember that WARK is off the back of WTOP's pattern. WTOP has something like 1.5V/m @ 1 km toward WARK, not the 4+V/m like the front of their pattern, or the 2.8V/m RMS of the pattern. The stations are about 54 miles apart.

Yet today, with noise and all, anything beyond the 5 mv/m contour is pretty
useless.

I have to laugh at that (nothing personal, DE). More of this
selective "acceptable interference" while NAB Eddie and his thugs
continue their audacious lies about third adjacent LPFM.

LPFM is to Eddie what Weapons Of Mass Destruction are to George W.

Carry on.

My maps show Monterey Park to be off to the north of the KTNQ peak. I'd guess down to the half-power point on the pattern, or lower. Pattern peak direction abt 245 deg, direction to Monterey Park abt 290 deg. In any case, 30kHz spacing shouldn't be a severe test.

Is this even possible with an antenna connected considering atmospheric noise, or is atmospheric noise very low in the Southern Hemisphere and Australia?

Regards,

John Byrns

Monterrey Park is right in the major lobe on the KTNQ pattern, about 8 miles
W by NW of the Industry site; the ERP there is in the vicinity of 100 to 125
kw, depending on where in Monterrey Park you are. It may be less than
towards Huntington Park, but far more than a non-DA 50 kw operation.

With the IE station about 45 miles away, I'd say it is a decent test. In
fact, 1050 in that area is usually a mix of XED and the IE station.

The sensitivity figure was intended to be 1.0 microvolt.

I've corrected the message and included it again below.

Thanks for catching it John.

Graeme

Corrected message:

Am looking for a reasonable cost BCB (MW) superhet tuner or receiver (valve
or solid state) which has a known sensitivity of 1.0 microvolt or less for
10 dB s+n/n ratio. May be a manufactured or kitset radio, or a magazine
project. All advice and references appreciated. TIA.
Graeme

There is the occasional exception to the rule too. I know of one station that was IDed at 101.9, then became K102, then went back to 101.9 (same basic format with a re-tweaking each time.) There were also 102.3 and 102.7 stations in the same market. Go figure.

But there are still more than 10 times as many AM Stereo stations as there are AM stations using IBOC. And as for "fewer and fewer stations broadcasting it", you could say that about IBOC -- within my listening range here in NJ, there are at least half a dozen stations which tested IBOC for a few weeks or months and then gave up on it.

For example, iBiquity's web site lists 860 WWDB in Philly and 930 WPAT and 1480 WZRC in the NYC area as current IBOC signals, but all of these stations haven't transmitted IBOC in almost a year now. This kind of track record does not inspire much confidence in the future of IBOC, at least on the AM band.

You have a point. As far as I'm concerned the NAB is correct about
LPFM, and dead wrong about IBOC, especially AM IBOC. But whichever
side of the debate you take, they're being inconsistent.

But what if you're in Nowheresville, Wyoming, and a few < 5 mV/m AM signals are all you've got? Tough luck, I guess?

The AM IBOC scheme is chronically myopic. Each station using it shall only be concerned with their own primary local coverage area. But what about when the skywaves kick in, and somebody else's "useless" secondary coverage area suddenly lands smack-dab in the middle of your primary coverage area? The middle of the band is a prime example. Here in NJ at night, there's 1000 from Chicago, 1010 from NYC, 1020 from Pittsburgh, 1030 from Boston, 1040 from Des Moines, 1050 from NYC, 1060 from Philly, 1080 from Hartford, 1090 from Baltimore, 1100 from Cleveland, 1110 from Charlotte, 1130 from NYC, 1140 from Richmond, 1170 from Wheeling, 1180 from Rochester, 1190 from NYC and/or Ft. Wayne, 1210 from Philly, and 1220 from Cleveland. Put IBOC on all of these stations at night, and the mutual destruction would be horrendous!

Some have suggested that allowance of nighttime IBOC, if any, should be considered on the basis of whether two new AM broadcast signals, on either side of the IBOC station's carrier and with the same power level and signal pattern as the IBOC sidebands would have, would be allowed according to the current FCC allocation scheme. In other words, if WXYZ at 1000 kHz wanted to broadcast IBOC at night, it would be judged on the basis of whether it would be legal to create two new stations, 990 WXYZ-Lower and 1010 WXYZ-Upper, with the same power level and signal pattern as the IBOC sidebands of WXYZ would have. In most cases, the answer would be an emphatic NO.

For a 50,000 watt station, the total power used by the IBOC sidebands is about 1500 watts. Split that in half, and that's about 750 watts on each sideband. So, could 710 WOR fire up a new 750-watt station on 700 kHz and another new 750-watt station on 720 kHz at night? Obviously, no -- the new 700 kHz "station" would violate the protection that is afforded to 700 WLW, and likewise the new 720 kHz "station" would walk all over 720 WGN. So, given the same parameters of operation, how could WOR's IBOC sidebands (which can hardly be called "In-Band, On-Channel") ever be allowed at night? iBiquity and the NRSC think they should be... but what's going to happen in the

real world?

Mark my words -- if there's one thing that's going to finally kill off AM radio entirely in North America, it's definitely going to be IBOC.

Amateur Radio Newsline™ Report 1400 June 11, 2004

The following is an advisory and not necessarily for air. Ladies and gentlemen, Amateur Radio Newslines' Support Fund Administrator, Andy
Jarema, N6TCQ:

--

This is Andy Jarema, N6TCQ, Newsline Support Fund Administrator, getting caught up with our supporters. In the month of August of last year we heard from The Reading, PA Radio Club, W3BN; Joseph Bartzi, Jr., KC8DKF of Columbus, OH; The North Hills Radio Club in Sacramento, CA; monthly contributor William Walters, WA2IBM, of San Jose and monthly contributor Scott Hensley of the Area Communications Team, also in San Jose

Thank you to everyone, and we promise to do our best to continue to earn your care and support. A reminder that Newsline is a federally chartered 501c 3 California non-profit corporation. FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast.

I'm Andy Jarema, N6TCQ.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1400 with a release date of Friday, June 11 2004 follows in 5-4-3-2-1.

The following is a Q-S-T.

Australia to make big changes in its Amateur Radio service, Greece will welcome hams at the 2004 Summer Olympics and Amateur Radio Newsline celebrates 1400 weeks of service to the world-wide ham radio community. It all comes your way, right now!

(Billboard Cart Here)

**

RESTRUCTURING: BIG CHANGES DOWN-UNDER

Big changes are coming to ham radio down-under. This, as Australia announces some sweeping changes that are about to take place in that nations Amateur Radio service. Owen Duffy reports:

--

The ACA has released their report entitled "Outcomes of the Review of Amateur Service Regulation". The report contains the ACA's intended changes to the Amateur service following stakeholder response to the recent discussion paper entitled "A Review of Amateur Service Regulation."

The key changes are removal of the Morse qualification requirements for all grades of amateur radio license; introduction of a new entry level license (the Foundation License) along the lines of the UK Foundation License, although it will be adapted to suit Australian preferences.

A three tier licensing structure: Advanced, Standard, and Foundation; translation of Unrestricted, Limited and Intermediate licenses to Advanced; translation of Novice and Novice Limited licenses to Standard; a privileges package for the Standard License that is much greater than enjoyed by Novice Licenses today.

A generous privileges package for the Foundation License allows voice or Morse code at low power (10W PEP) using only unmodified commercial transmitting equipment on all of 80m, 40m, 15m, 10m, 2m, and most of 70cm.

Australian participation in CEPT Recommendation T/R 61-01 (reciprocal licensing) is in progress. The status-quo is essentially preserved in respect to higher operating power; interference and interference management built on current arrangements.

Apparatus Licensing as the vehicle for licensing Australian amateur stations (though stations licensed under CEPT Recommendation T/R 61-01 would be class licensed). State significance of callsigns remains.

This has been Owen Duffy for the CQVK project on Q-News Australia.

--

As we go to air, no effective date for these changes to take place has been announced by the Australian Communications Agency. (Q-News)

**

INTERNATIONAL: THE BIG DISPUTE

Two Asian Pacific nations are embroiled in a territorial dispute and Amateur Radio appears to be caught right in the middle. Q-News Graham Kemp, VK4BB, is in Brisbane with the details:

--

A centuries-old territorial dispute between Japan and South Korea is again escalating with the South Koreans placing a group of amateur radio operators on the rocky islets known in Korea as the Lonely Islands. To the Japanese they are the Bamboo Islands.

The radio station, licensed by South Korea, was seen as a provocation by the Japanese. Some amateur radio operators in JA are

said to have interfered with the South Korean stations transmissions.

I'm Graham Kemp, VK4BB, of Q-News for the Amateur Radio Newsline.
--

Kemp says that hams around the world were surprised to hear about the dispute. This is because our hobby stresses development of technologic skill along with friendly international communications. (Q-News)

**

RESCUE RADIO: THE NEBRASKA TORNADO AFTERMATH

Back on this side of the Pacific Amateur Radio operators were on duty aiding tornado-stricken communities in Nebraska and elsewhere in the Midwest. Norm Seeley, KI7UP, picks up the story from here:

--

As we reported last week, a May 22nd tornado virtually destroyed most structures in the small town of Hallam, Nebraska. Hallam is located some 20 miles south of Lincoln and one death there was attributed to the storm.

During and after the tornado ham radio was an important part of the overall emergency service effort. The ARRL Letter quotes Nebraska Section Emergency Coordinator Reynolds Davis, K-zero-G-N-D, as saying that Lancaster County ARES and SKYWARN spotters were activated that evening in response to a report of an approaching front. Within a half-hour, W0NWS at the National Weather Service office was receiving tornado damage reports via the Lincoln Amateur Radio Club K0KKV repeater.

The storm severely damaged a high school in Norris, Nebraska, and plucked the tower supporting the K0RPT repeater's south region receiver from the ground. The tornado went on to demolish additional homes to the northeast. Its path of destruction finally ended south of the town of Bennet.

Once the SKYWARN Nets closed, the remainder of the K0RPT system was put into service to support Red Cross communications between the tornado scene, the chapter house and a shelter set up in a Lincoln high school for residents displaced by the storm. Two ARES nets were activated May 23rd to coordinate damage survey and assessment. They logged reports via K0EOC at the Lancaster County Emergency Operations Center.

For the Amateur Radio Newsline, Norm Seeley, KI7UP

--

Amateur Radio communications support continued for several days. (ARRL)

**

Break 1

More news after a break for you to identify your station. Cue the announcer, please:

"From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the K2SBD repeater serving Long Island. New York."

(5 sec pause here)

**

WITH NEWSLINE: SEND US YOUR ID - PLEASE

The station I-D you just heard was recorded a few weeks ago at the Dayton Hamvention. And it has lead us to an idea.

Would you like to I-D your own repeater or bulletin station here on Amateur Radio Newsline? Well here is how you can do it.

Simply record on a cassette tape the following sentence and include the call sign and location you want to honor.

>From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the
"xxx"
repeater serving "yyy zzz." The "xxx" is the call
sign. The "yyy"
and "zzz" are the city and state.

Then, take the tape and mail it to Amateur Radio Newsline, Editorial Office, 28197 Robin Avenue, Santa Clarita, California, 91350. As time permits, we will select an audio I-D and include it in the newscast.

All tapes submitted become the property of the Amateur Radio Newsline and cannot be returned.

Again, the address to make yourself a part of this bulletin service is Amateur Radio Newsline, Editorial Office, 28197 Robin Avenue, Santa Clarita, California, 91350. (ARNewsline(tm))

**

HAM RADIO IN SPACE: FIRST EXPEDITION 9 QSO A BIG SUCCESS

AMSAT reports that the first ARISS contact with the Expedition 9 crew on the ISS took place on Tuesday, May 25th. During his first-ever amateur radio contact, Astronaut Mike Fincke, KE5AIT, answered 18 questions asked by the students who gathered at the Erie Planetarium in Pennsylvania.

The contact used the facilities of telebridge station, VK5ZAI, in Australia to assure high quality space to ground communications. It

was deemed very successful as the children applauded and thanked KE5AIT for taking the time to join them from space. We will have more ham radio space related news later on in this weeks newscast. (AMSAT, ARISS)

**

WORLDBEAT: HAM RADIO AND THE 2004 SUMMER OLYMPICS

If you are planning to attend the 2004 Summer Olympics in Greece, we have some good news for you. Foreign radio amateurs from CEPT countries or from countries with reciprocity can use the special prefix J42004 from August 1st to November 15th without any special license from Greek Authorities.

Not only that. Demetre Valaris, SV1UY, says all hams visiting Athens for the Olympics is more than welcome to give a shout on 145.425 MHz with a 88.5HZ access tone. Demetre says that this is so visitors can hook up with Greek hams and share hospitality.

What about visiting hams from non CEPT nations? They will have to contact Greek telecommunications regulators for special permission to operate. (Via E-Mail)

**

RADIO RESEARCH: MCRN TO TEST RADIATION ANGLES

The Marconi Radio Club of Newfoundland station VO1MRC will be conducting an antenna comparison experiment on the 19th and 20th of June and you are invited to take part. Amateur Radio Newsline's Bruce Tennant, K6PW, has more:

--

Each day during the experiment from 0000 to 2400 UTC station VO1MRC will operate a CW beacon on 5269.5 kilohertz. Its purpose will be to determine the relative performance of high and low radiation angles. The antenna in use will be identified by a code in each transmission.

VO1MRC will also be open briefly for 2 way contacts with stations authorized to transmit on 60 meters starting 0000 UTC each of these days and will operate simplex on 5260.5 kilohertz CW. Following this it will transmit on 5327.5 kilohertz upper sideband and receive 5346.5 kilohertz upper sideband and 3807.5 kilohertz on lower sideband.

The experiment was proposed by Marconi Radio Club of Newfoundland and is endorsed by Radio Amateurs of Canada. Its operated under an authorization issued by Industry Canada which is that nations telecommunicastions regulatory body.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

For further information, please check the Marconi Radio Club of Newfoundland web site. That U-R-L is http://www.ucs.mun.ca/~jcraig/5megex.html (RAC)

**

ENFORCEMENT: TO MUCH RF

The licensee of FM station KWNZ, located in Carson City, Nevada, has been fined $10,000 by the FCC. This, for creating ground-level radiation in excess of the permissible public exposure level at KWNZ's McClellan Peak transmitter site.

The CGC Communicator says that the various excuses offered by the licensee were not impressive. For example, KWNZ contended that there was no evidence whatsoever of public use of the particularized ten square foot area where the station exceeded the RFR permitted radiation limits.

According to the FCC, it is not necessary to establish actual public use of the particular unfenced and unmarked]area where excessive power density occurs. The regulatory agency says that public use of an area nearby is sufficient.

(DO NOT READ: More is on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1533A1.doc (CGC)

**

ENFORCEMENT: AMATEUR RADIO ACTIONS

Now with more enforcement news here's the FCC's Daryl Duckworth, NN0W:

--

Audio report only. Hear it on this weeks newscast at http://www.arnewsline.org
--

More on these issues as the FCC releases follow-up information. (FCC, RAIN)

**

BEST PRACTICES: EMERGENCY READINESS GUIDE FOR LOCAL MEDIA

The FCC's Media Security and Reliability Council has published a new booklet titled the "Readiness Guide for Local Media on How to Prepare for Emergencies." This colorful pamphlet is good for a quick overview of what the media should do in times of emergencies. Its available on the web in both Mocrosoft Word and PDF format. The PDF version is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-

244522A1.pdf. Download the following doc version at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-244391A1.doc. Finally, the generic website for the Media Security and Reliability Council is http://www.fcc.gov/MSRC/. (CGC)

**

ON THE AIR: THE COLLINS COLLECTORS NETS

And if you own vintage ham gear, you might want to become a member of the Collins Collectors Association and join one of their monthly nets. The nets are held the first Wednesday of the month on 3.888 MHz beginning at 7:30 PM in the Eastern time zone and 8 PM in the Central, Mountain and Pacific time zones.

These nets draw hundreds of vintage stations from across the country and are anchored by a "tall ship" AM station in each time zone and you do not need to operate Collins gear to take part. For more information. just tune in. Comments go by e-mail to wa9vrh@mtco.com (Via e-mail)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United
States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: LLOYD "SIG" SIGMON W6LQ - S.K.

A ham radio operator who developed a public warning scheme that eventually carried his name, has died. This, with word that 95 year old Lloyd Sigmon, W6LQ, became a silent key on Wednesday, June 2nd, following a long illness.

Known to his ham radio buddies as Sig, in 1955 W6LQ perfected a method that allowed the Los Angeles Police Department to issue emergency warnings over local radio stations. At the time Sigmon was an executive with radio station KMPC and wanted to boost station ratings by providing traffic information.

Then Los Angeles Police Chief William H. Parker permitted use of Sigmon's device but only on the condition that it be made available
to any radio station that wanted to use it. He also is dubbed the bulletins as SigAlerts in honor of W6LQ.

The first SigAlert was broadcast on Sept. 5, 1955. It was carried by six radio stations and urged medical personnel to respond to a train derailment outside Los Angeles Union Station. The California Highway Patrol later took over freeway traffic warnings from the Los Angeles Police Department and handles SigAlerts, which now are computerized.

Lloyd Sigmon, W6LQ, was born in 1909 in Stigler, Oklahoma. He was fascinated by electronics and received his first Amateur Radio license at age 14. He died at Green County Assisted Living Center in Bartlesville, Oklahoma, where he had been residing the past four years. (Published news stories)

**

RADIOS LEGACY: THE HISTORIC KGFJ 1230 KHZ TRANSMITTER SITE HAS BEEN SHUT DOWN

The CGC Communicator reports the passing of a different sort. This with the announcement that on May 24th a historic AM broadcast transmitting site was turned off after 80 years of service.

In 1924, radio station KGFJ started broadcasting from the Odd Fellows Lodge Building on Oak Street near downtown Los Angeles. In more recent years, the station call sign was changed its call letters to KYPA.

Shortly after 4 PM on May 24th, Marvin Collins, W6OQI, turned on the new 1230 kHz transmitter. Its signal is diplexed into a tower at the KBLA 1580 kHz transmitter site.

Collins says that the old KGFJ "flat top" antenna had been in continuous use by since 1924. He adds that the old antenna may well have been the last full-time use of a flat top antenna anywhere in the country.

Marv took photos of the old KGFJ site and the new diplexed setup at KBLA, visit Marvin's web page at http://earthsignals.com/Collins/ and scroll to "KGFJ 1230." You can write to Marv at KFIam640@aol.com

(CGC)

**

HAM RADIO IN SPACE: BIG LAUNCH DOLLARS RAISED AT DAYTON

AMSAT says that its Launch Fund campaign now has $93,0000 in it. This, thanks to donations received at the recent Dayton Hamvention including one anonymous donor who matched every dollar collected with another one.

AMSAT North America President Robin Haighton, VE3FRH, says that now is the time to make a final push to reach $110,000 goal. He adds four words that seem to come right out of the Mel Brooks musical the Producers. The four words are - "we can do it." And
Haighton is

confident that they will.

More about the fund and ham radio space exploration is on-line at www.amsat.org. (AMSAT-NA)

**

HAM RADIO IN SPACE: ECHO NEAR COMPLETION

And some more good news from on the ham radio satellite scene. It comes from Jim White, WD0E, who has been testing and performing final integration of the ECHO ham-sat.

White says that as far as he can tell the ECHO team is on track and the new satellite is looking good. He says that there are a few minor items have to be completed before the bird is sent to the Kazakhstan launch site. White says that he is confident that it will be 100% by the time it gets there for the launch. (AMSAT-NA)

**

WORLDBEAT: HFRADIO.NET TAKES LIGHTNING HIT

Due to a system failure caused by a recent lightning strike, the H-F-RADIO dot NET Canadian Amateur Radio Bulletin service has lost its database of subscribers. In order to rebuild it and for subscribers to continue receiving those weekly bulletins, hams across Canada are asked to send an e-mail to webmaster@hfradio.net with the word "subscribe" in the subject line. (RAC)

**

DX

IN DX, K8AQM, reports that his trip to Samoa will take place between July 7th to the 21st. While there he will operate as 5W0TR on 160 through 10 meters using CW, SSB, RTTY and PSK. Also, look for him as KH6BB from Hawaii July 5th and 6th and 22nd through he 24th. QSLs go via K-8-A-A as his Callbook address.

And members of the United Kingdoms Wrexham and District Amateur Radio Society will be on from the Isle of Man from September 1st to the 8th. Station location will be at the discontinued Coast Guard lookout tower at Scarlett Point. Activity will be on all High Frequency bands plus 50 MHz, 70MHz, 144MHz and 432 MHz, at full UK power on CW, SSB, RTTY, PSK and SSTV. More information is on-line at www.gb4iom.co.uk (Various DX sources)

**

THAT FINAL ITEM: CELEBRATING NEWSCAST 1400

And finally this week its time for a bit of a celebration here at Amateur Radio Newsline. That's because this newscast marks 1,400 consecutive weeks that we have been bringing you news from the worlds

of Amateur Radio and personal communications. With some thoughts on this milestone, here's our producer Bill Pasternak, WA6ITF:

--

If you get out your calculator and do the math, you will find that 1400 weeks comes out to be 26 point 923 years. Close enough in our book to say 27. And in ham radio news, I guess we can say that's a
pretty long time.

Back when we still edited on tape I used to wonder how many splices that we made in a year. One day I sat down and figured out that there were about 30 in an average newscast. That was 120 a month or 1440 a year and an awful lot of Scotch splicing tape. Had we stayed on tape it would mean that we would have cut into a piece of audio tape 38,880 times as of today.

But we stopped putting the newscast together using tape almost 4 years ago. Now its done in the digital world using computers and programs like Goldwave and Cool Edit pro. Becoming part of the digital age early on is something we are kind of proud of. Being on your favorite repeater for the past 27 years and never missing a deadline is another.

As we enter year 27 and begin rolling on toward year 28, we pause and renew our simple pledge to you. The promise we made many years ago and which continues to guide our very being. Amateur Radio Newsline will be here as long as you want us and as long as you support us. We exist to serve you and we all consider it an honor to do so.

Speaking for all of the volunteers who make up the world-wide Amateur Radio Newsline team, I say &#65533; "thank you." Thank you for sharing your
lives with us through the magic of Amateur Radio. Thank you for caring about us through your ongoing support. Most of all, we thank you for being a part of what we like to call the Amateur Radio Newsline family.

To paraphrase a line from the show Chicago. "We simply could not do
it alone."

Again, we thank you.

I'm Bill Pasternak, WA6ITF.

Jim.

--

As one of the anchors who has been here almost from the start, I add my thank-you's as well.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award is now on. This program is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states and who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org. The cutoff
for
nominations this year is midnight on June 30th.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm
Jim
Davis, W2JKD, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

You're preaching to the choir (or at least the priest sitting in the back of the sanctuary). Your analysis is dead-on, excepting that the Canadians determined long ago that AM was dying, and more recently, that FM should follow it into the grave as soon as it's reasonably possible. The U-S's actions will only expedite the patient's demise.

Living in Pittsburgh, and as you mention KDKA (I used to work for them, at that), I can tell you that there were some winter mornings where WBZ's sidebands would blow the doors off of even the metro-grade signal....I hate to think what's going to happen when/if WBZ turns IBOC on at night. Then again, I don't really care. I gave up AM pretty much when the noise floor went to -10 on most channels.

Let's say there are turly 200 AM stereo stations left... you are saying
there are fewer than 20 AM IBOC staitons.

Just the company I am with has 5, and there are already about 50 on the air
and another roughly 200 ordered and in construction.

Since IBOC does not coexist with AM stereo, it's over. The IBOC stations are
in major markets, and the AM stereos are generally X-band or oddball
stations with a penchant for suffering.

> And as for "fewer and fewer

And which would they be? I don't know of that many in the whole country, and
the few that there are had problems with thier antenna system, not with IBOC
per se.

>

The two NY stations have horrible DA systems, neither being optimized for
low-Q and bandwidth. And both are ethnic, not candidates for effective use
of IBOC when brokers bring thier programs on home made cassettes or CDs.

Yep. Skywave AM is essentially dead. I have driven at night across Wyoming, from the NW down to the SE. There are FM signals everywhere. In the daytime, many areas have no AM signals, while you can get a minimum of several FMs.

FM, especially after 80-90, has given nearly every part of the country multiple FM signals, including areas where there was no day AM coverage.

Radio is essentially a local, single market medium. It is definitely treated that way by advertisers.

Don't make the mistake of equating the number of stations which have ordered or installed IBOC equipment with the number of stations which are actually _using_ IBOC. AM stations which have abandoned use of IBOC (even if they may still have the equipment installed) include WLW, WKDL, WSB, WWDB, KIXI, WPAT, WWJ, KABL, WZRC, and WTOP. As of March, the grand total number of AM stations actually transmitting an IBOC signal was around 20. Perhaps there are a few more today, but I haven't heard of AM IBOC use growing by leaps and bounds in the past few months.

Also, KNX, WMTR, WWTR, and WCTC may have filed a Digital Notification with the FCC, but as of yet, none of these are actually transmitting IBOC -- in fact, WCTC is still proudly broadcasting in AM Stereo, and in a recent conversation with their Program Director in which I discussed AM Stereo, he did not mention IBOC at all. I think Greater Media has notified ALL of their stations (AM and FM) as IBOC with the FCC, regardless if each station has any plans to actually install and use it or not.

> The two NY stations have horrible DA systems, neither being optimized for
> low-Q and bandwidth.

Excuses, excuses. MOST stations in the country are "sub-optimal" and are likely to have many of these same flaws which will seriously inhibit their success with IBOC, or even make it impossible. (Even WOR says "our upper sideband does not exist north of Paramus, NJ" -- how's that for a lousy DA?) So if/when IBOC is mandated, what will happen to these stations? Rather than spend $100,000+ on a complete overhaul, I bet many would just go off the air -- which is both good and bad. Good, because it would finally "clean up" the AM band and restore useable nighttime coverage area on Class B and C signals. Bad, because just as many "good" stations (in terms of programming, ratings, and listenership) will be forced off the air as "bad" stations, and those that are left will be forced to use IBOC -- even though the "de-cluttering" of the band would once again make hi-fi analog AM a reality.

Collins R-390A can do that with the unbalanced input with a CW signal,
and exceed it handily.

Drop that thought.

No, you don't have to literally record the words yourself. You can have somebody do that for you, but as has been made pretty clear here already, you cannot record the "words" from someone else's radio station and then play them on yours. Sure, the politician was no doubt speaking in a public forum, but the radio station from which _you_ got the audio was the party that some way, some how and for sure paid for that audio. And that station owns that particular rendering of that audio. They paid for it. They sent a reporter to the scene to record it. Or they paid a network in spot inventory to get it. You didn't. There isn't such a thing as free audio for use on the air (unless, of course, you negotiate a price of $0.00 with the party that owns it. You can't just take it from the owner (well, you _can_ but you shouldn't). I think your search for free stuff is going to be futile.

The ICOM R-71A is excellent but pricey. However I've found success with automobile radios. You can buy or build a 12 volt 1.5 amp power supply inexpensively.

Assume 50 ohms input impedance, and 6 KHz receiver bandwidth (3 KHz received
audio).

BlueCat suggested a car radio.

Car radios have had bandwidths not far different from 6 kHz for some years
now.

Let's guess that the input impedance of an automobile AM radio is 5000 ohms.
That means that 10 uV at 5000 ohms is the same signal power as your 1 uV at
50 ohms. I'd guess that a good car radio would do that ... you might have
to raid a junk yard to find a radio old enough to be "good". Especially
avoid the recent cars with an amplified AM antenna on the roof.

Bob

Old 1970s car radios are in general extremely sensitive. Selectivity is
sort of doubtful on a lot of them, but because they are normally used with
a small whip antenna, high sensitivity is essential. A Delco AM radio
should be available for free at your local junkyard.

Yes, but they weren't exactly good. Okay, they weren't any good. I built
a really neat 10M converter using a compactron from a QST project and found
the selectivity issue was pretty serious even though most folks were running
AM and the bands weren't as crowded.

# 1498. Ray Charles Memorial Service KKJZ-FM

Newsgroup: rec.radio.broadcasting
Date: 2004-06-18 15:40:18 UTC
From: tedalvy@aol.comdotcom
Message-ID: <cav2d2$81d$1@xuxa.iecc.com>
Source record: 4988

On FRIDAY JUNE 18, 2004 the RAY CHARLES Memorial Service at the First AME Church will be broadcast Live on KKJZ-FM (88.1) from 10 a.m. until Noon.

[ Moderator's Note: K-JAZZ simulcasts on KUOR-FM 89.1 Redlands. KUOR is available throughout the Inland Empire and up here in the Victor Valley. For those inland that can't reach 88.1 in Long Beach: Try KUOR. I will be listening today. ]

L.A. TIMES June 15, 2004

QUICK TAKES by Geoff Boucher

Memorial set for Ray Charles

A public memorial service for the late Ray Charles has been scheduled for noon Thursday. The 73-year-old singer, who died last Thursday, will lie in repose until 8 p.m. at the South Hall of the Los Angeles Convention Center, which is adjacent to Staples Center downtown.

A private funeral is scheduled for Friday at the First AME Church with Stevie Wonder, Willie Nelson and B.B. King among the expected program participants.

>do you have to record their words yourself?

More difficult to answer since many political things are done through a pool. CNN, for instance, is the Republican Convention originator.

The practical issue is whether or not the feed can be traced to its source and that source objects to it being used by anyone other than those licensed to do so.

Where will you get your feed? From a radio station? They also have a say in how their material can be used.

Whenever you use material you're not licensed to use you risk heavy duty litigation.

Rich

Going way back to the 60's, a network of stations in Puerto Rico (WKYN, WPRP and WORA) was fined and nearly lost its licenses when the manager had AFRTS broadcasts taped in New Orleans and sent to PR for broadcast without consent. And AFRTS is not even a commercial broadcaster!

From: jaclat970@aol.com
Message-ID: <cb1p65$23t$1@xuxa.iecc.com>
Source record: 4999

I read the anniversary site on the CBC, and I'm jonesin' for some old school. I remember when I was in junior high, and despite my mom's efforts, I stayed up WAY past my bedtime to listen to Brent and his ingenious mix of music. Anyway, after going to the anniversary site, and searching the groups here, I've noticed there's a lot of people here who are looking for some old BNW stuff. Well, you can add me to the list.

I used to hear the show on WXPN here in Philly, and well, it was a godsend. Of course after that was over(at least here), I pretty much moved on, more or less. I have recently listened to Patti online, and I think
she's doing a hell of a job. But Brent left a HUGE impact not just on my radio listening, but also my musical tastes. He was just so damn brilliant. I'm sure, most of you agree with me. Anyway, if anyone can help me out with some copies of the show on tape, I'd appreciate it.

If you want to set up some kind of deal or whatever, fine. I'm not doing this for money, though. It's all about the throwback, BABY! Thanks.

I believe it was an AFRTS broadcast of a US network program. However, the
FCC investigated the off-air-recording aspect, leaving unprotected the
copyright violation of the network broadcast.

The case is in the FCC historic file, I believe. Searching under George
Mayoral, Alfredo Ramirez de Arellano and WKYN will find it.

# 1512. Re: Fair Use in a Talk Show

Newsgroup: rec.radio.broadcasting
Date: 2004-06-19 22:04:40 UTC
From: "Cooperstown.Net" <mrslote@nospam.aol.com>
Message-ID: <cb2d9o$kkr$1@xuxa.iecc.com>
Source record: 4852

When AFRTS was available domestically on shortwave, the DOD-produced programs were pretty much only one-minute info spots. The rest was commercial radio newscasts, feeds of voice actualities ("Stations, stand by for 'Cut 12' in 3...2...1") and play-by-play sports.

Any unaffiliated station using this material had to know it was hoping to get away with something.

The "Radio Crazy" is baaaaakkkkk!!!!

Ideal station would be with seller financing and real
estate. I don't care what market size. I don't care if
station is profitable or not.

I don't want "pure" daytimers. Must have at least 50
watts night power.

Should be cheap. Asking price $150,000 or less.

I will pay a 5 percent finders fee to anyone
furnishing me a lead if I actually buy the station.

Tel: (478)741-1710 in Macon, Georgia.

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"
aka Moron Gottesman
aka Maven Gottesman LOL!

AFTRA is a union representing announcers and air talent. It has nothing to
do with playing a song.

In the US, the artist is not compensated for Analog broadcast of music.
Composers and Authors are, via blanket collection agencies ASCAP, BMI and
SESAC. Each charges radio and TV stations (and even web streamers) a fee in
proportion to station size for usage of the music in the catalogs they
represent.

In the case of the FCC vs. George Mayoral, Alfredo Ramirez de Arellano, et.
al., the issue was rebroadcast without authorization of the program content
of another radio station. The FCC does not have jurisdiction on music
license issues.

## 1517. Sports broadcasting

I'm working on a future best-seller about sports-talk radio.
Sports-talk junkies, please tell me:

Do you prefer stations that keep the focus tight on sports ... or
stations that emphasize lots of "guy talk" (sex, rock, movies, etc.)?
(Why?)

Do you give more credibility to what you read on the sports page, or
what you hear on sports-talk radio? (Why?)

What the stupidest thing you've ever heard on sports-talk radio?
What's the coolest thing you've ever heard?

For sports-talk listeners in Dallas only: In 25 words or less, tell me
why "The Ticket" is the hippest station on the air ... or why it's the
official station for 35-year-old career adolescents.

My tastes aren't as upscale as John's, but I love the BBC, too ... In fact, BBC-2. It's the most popular station in Britain, and they claim, in the world (I don't doubt it). It's the best combination of modern-day pop, rock and oldies with really smart chat, and, of course, that wonderful Brit wit. Steve Wright (on from 8 a.m.-11 a.m. U.S. Central time) is especially great. I listen, of course, on the 'net. U.S. public radio would do well to create something like it.

No. 2 would b KGSR in Austin. Terrific rootsy music, with jocks that know music and care about music. Also on the 'net.

## 1520. Comprehensive guide to programs

Newsgroup: rec.radio.broadcasting

From: Steve <abc@123.com>
Message-ID: <cb87i8$dnd$1@xuxa.iecc.com>
Source record: 4860

Hi,

As someone new to the hobby of shortwave listening I am surprised by the quality of some of the programming available but hampered in my inability to unearth them. What I would like to ask is if anyone knows of a resource that reviews radio programs that are favorites among listeners? For example, the most recent issue of "Passport to World Band Radio" has a section entitled "First Tries: Ten Easy Catches" that alerted me to Radio Taiwan International's "Jade Bells and Bamboo Pipes" and Radio Canada's "The World this Weekend." There must be a number of shows that more seasoned listeners would recommend and I would welcome any individual suggestions or guidance to a more comprehensive listing of quality shows.

Thank you for your help, Steve.

Note: If there are a number of responses I will be glad to assemble a list and post it

Some day, business students will study the failure of the Air America network.

Though so many reasons can be explored, it's my opinion that the primary reason for the network's eventual fall has to do with its attempt to start out on top.

You can't simply target Rush on a national scale and expect to beat him. Rush is a consummate radio broadcasting professional who started at the very bottom and worked his way to the very top. He didn't start out trying to force his political opinion on any one. He took his top 40 superjock persona into the talk radio segment, and people enjoyed the product. Through hard work and perseverance, his show grew exponentially. He's not a conservative who happens to be a radio entertainer. He's a radio entertainer who happens to be a conservative. So could liberal talk radio succeed? Of course. Howard Stern and Don Imus are two fine examples who come to mind.

Radio is not an easy medium to conquer. It's not simply TV without pictures. To really succeed in radio requires one to start at the bottom, listen to radio every waking hour, find mentors to help you develop your personal style, and prepare to work very hard for very little money. You'll probably go through a couple of spouses pretty quickly.

Some day, there will be someone who beats Rush. But I don't think it will come from an organization like Air America. Instead, I think it will come from an individual who is in love with radio and can't stand being #2.

During my days in the broadcast field (late 1950s), periodically a day's play list would be perused and then assessments made and distributed to the above according to what was played. This was a convenient averaging out system that apparently worked well for all concerned.

In my opinion, Air America NEVER intended to be a success (not that
they wouldn't mind being so). The new campaign finance laws exempt
"media" (or words to that effect) from the law. So, you set up a "network",
unabashedly attack on of the parties, and then shut the operation down
after the election.

What media network is the NRA running that they intend as a sham
to get around campaign finance laws and then shut down next year?
I haven't heard of this until you mentioned it.

Excellent point, and, speaking of Air America and NPR, shouldn't there
be a place at Air America for Terry Gross?

# 1532. WBAI-FM TAKEN OVER BY BLACK RACIST VIOLENT CABAL OR....DUPES?

Newsgroup: rec.radio.broadcasting
Date: 2004-06-24 17:25:07 UTC
From: rosaphilia@webtv.net
Message-ID: <cbf2pj$33g$1@xuxa.iecc.com>
Source record: 4874

E-mail message

From: steve@stevebrownonboard.org(Steve@SteveBrownOnBoard) Date: Wed, Jun 23, 2004,

Subject: RACE-BAITING, "WHITE-TRASHING," ANTI-SEMITISM & IMPERMISSIBLE BEHAVIOR AT WBAI
Race-Baiting, "White-Trashing," Anti-Semitism, Physical Intimidation, and Other Impermissible Behavior at WBAI

The following piece identifies real people, reproduces transcripts from actual sound checks, reprints excerpts from current list-servs and the public record, and describes actual incidents that I myself have personally witnessed, and that, in some cases, were also simultaneously witnessed by hundreds of others.

Those whom I have specifically singled out by name in this piece are not "small fry" or a few isolated "crazies," of which any organization such as WBAI must expect to have its share. On the contrary, all are prominent, long-time "personages" in the WBAI community. Most if not all are also prominent producers and on-air personalities at WBAI, or indeed are members of its highest management levels.

I wish to make it clear that (1) no one but myself is responsible for the information and conclusions expressed below. And (2) that I am writing, not as a member of the WBAI Local Station Board, but as a listener and private citizen.

If any of those named in this piece wish to dispute the truth or accuracy of what I have written, they are free to hold me responsible either in a court of law or in the court of public opinion.

I ask only that they address themselves specifically to the truth and accuracy of what I have written, and to the issues I have raised, not to whether I "... should be ignored because [he is] motivated by dreams of White supremacy," or should be "watched" because I am "just another old, rich White man who wants to rule Pacifica and keep people of color out."

The above are just two of the ad hominem, "arguments by race-baiting" that have often been directed at me whenever I attempt to call for a discussion of certain issues.
And that is one of the reasons I have written this piece.

For I would like to see an end to the corrosive and divisive race-baiting, "white-trashing," anti-Semitism, and physical intimidation that have been occurring in and around the station with increasing

frequency.

It is my hope that those who encourage, or abet, or participate in such behavior will be replaced in their positions of authority and prestige by those more in tune with both the letter and the spirit of the Pacifica mission.
To The Members of the WBAI and Pacifica Community:

Recently, as a result of some of my postings on the issue of race-baiting, "White-trashing," anti-Semitism, physical intimidation and other impermissible behavior at WBAI, I have come under attack by a number of friends and colleagues of those whom I have accused of contributing to the current (and, in my opinion, deplorable) state of affairs at WBAI.

One such attack came from Dred-Scott Keyes, an WBAI engineer. He recently wrote an open letter to the Pacifica National Board (widely circulated on all of Pacifica's list-servs) entitled "Steve Brown and the Arbitron Myth", in which, among other things, he accuses me of unfairly criticizing WBAI's program director, Bernard White.

I do not know Mr Keyes personally, nor do I believe we have actually ever met. But I honor his long-time service to WBAI and =96 since Mr Keyes is a long-time associate of the WBAI Program Director =96 I also honor his praiseworthy attempt to defend a colleague whom, he feels, I have unjustly criticized.

Since Mr Keyes and others have raised important points around the above issues, I hope this piece will answer them in a manner that respects Mr Keyes' long service to WBAI as engineer, producer, and on-air personality.

I will start, not with an examination of WBAI Program Director Bernard White, but with WBAI engineer and producer Erroll Maitland. That is because, although not as highly placed as Mr White, his statements and behavior have been cruder, more inflammatory, and (but only marginally) more physically abusive.

For example, here is an excerpt from an Erroll Maitland interview that had been broadcast on KPFA (and was recently quoted on a WBAI list-serve).

The except seems rife with race-baiting and is shamefully full of crude anti- White characterizations. However, I reproduce it below, so you can judge for yourself.

The excerpt is 34 seconds from the sound-clip of an interview broadcast over KPFA, on July 8, 2003, regarding a debate over what should be included in Pacifica's new bylaws.

<BEGIN TRANSCRIPT>
Reporter : Local station board member Errol Maitland of WBAI in New York supported that draft [which was defeated, but which he says] would have

sent a message to what he calls "the neer-do-good liberals in Pacifica-land."
Maitland: And that they shot down because at the core of their -- these white people on the Pacifica board felt that black folks, that niggers came in and messed up their nice laid back foundation and they wanted to take it back . They wanted to take it back to the bosom of Berkeley where it can become a lily white organization again, free from niggers.
<END TRANSCRIPT>

A WBAI Local Station Board member who had read Erroll's statement on the list-serve then wrote (with what I detected to be an underlying note of pride), that such statements could never been made at WBAI, because:

"... if Erroll [Maitland]'s [racially offensive] statement had been broadcast over WBAI, there would have been a major protest from [our] listeners, black and white."

But in fact, Erroll and others have been broadcasting offensive statements of that nature over WBAI for years. And though there have indeed been protests from listeners, by and large the management of WBAI (and certainly Erroll Maitland) has shrugged them off, usually without any response, let alone an apology to the listeners and an admonition to Erroll and those like him.

For whatever it is worth, I have heard Erroll Maitland make such statements myself.

So have countless others. And not just over the airwaves. But also at meetings, fundraisers, public events, and broadcasting conventions.

In fact, I heard Erroll go on in this vein for 20 minutes in front of the microphone at the 7th Annual Grassroots Radio Convention in upstate New York, a few years ago, where, unfortunately, no one present made a peep of protest. For it is an old story that it is "OK" when a Black person utters the kind of crude racist remarks that would get a White person tarred and feathered anywhere in Pacifica.
Even more recently =96 just a few days ago

=96 Erroll appeared on a Saturday morning program over WBAI and discussed the Clearwater Music Festival, then going on. He characterized it as
"just a bunch of White men playing Black Man's music, and that's no good." [From memory. The sound clip will soon be posted online.]

But Erroll is not just words. He is a "major power" at WBAI who abuses this power to cut off or cut into the programs of other producers he does not like.

Or to deny them the airwaves, on his own whim, whenever he feels like it, as he did when Robert Knight came into the station to do a scheduled broadcast and Erroll decided, on his own, that he would not let Robert on the air.

As far as I know, Erroll was never admonished, let alone disciplined, for this egregiously improper and (with reference to the title of this piece) definitely "impermissible behavior."

Another example of Erroll's documented impermissible behavior (still studiously ignored by management, with whom Erroll is tightly connected) concerns the physical harassment and abuse of a woman.
Not long ago he assaulted (there is no other word for it) a female Pacifica volunteer, a white woman in her 50's, whose opinions he did not like.

Erroll, who is an imposing 6-2 inches tall and weighs (my guess) nearly 250 pounds, pushed his entire bulk right into this woman's face (she is approximately 5-1 and weights perhaps 110 lbs).

He then strode forward as fast as he could, so that she was forced to stumble quickly backwards in order not to be trampled. And all the while, as he drove her backwards across a distance of perhaps 25 or 30 feet, Maitland had a huge gleeful smile on his face, as he repeatedly set off the electronic flashbulb of his camera into this poor woman's eyes -- again and again, from a distance of approximately 6 inches.
The woman, who had a serious occular nerve condition, has been having headaches and mini-seizures ever since.

You may wonder how I know this, and why I accept it as true. The reason is that I personally witnessed this incident, and photographed some of it as it happened.

Where did it happen? It happened in sight of several hundred other Pacifica supporters who were attending a Pacifica National Board meeting at the Cathedral of St John the Divine, 112 Street and Amsterdam Avenue, in Manhattan, approximately a year and a half ago.

There is even an audio clip (since the convention had been recorded) in which one can hear the voice of Leslie Cagan, Pacifica National Board Chair, shouting out from her seat on the dais =96 "Stop, Erroll, Stop!"

The woman protested to the station manager, to the Pacifica Executive Director, Dan Coughlin, and to the Pacifica Board Chair, Leslie Cagan (who was a witness). The woman felt that the incident warranted an apology, at least, and possibly some disciplinary action against Erroll. You would think that with so many witnesses, this would have been accomplished quickly (and fairly).

But neither Cagan, nor Coughlin, nor the WBAI station manager could be persuaded to take action, or even request an apology from Maitland. That is because our "leaders" are fearful to be perceived as "taking the side" of a white woman who was challenging a Black man =96 let alone a Black man with so many friends in high places at WBAI.

This situation continues today.

Of course, sometimes a Black man will be disciplined for the "inconsequential" act of assaulting a woman. But he has to be a Black

man who has lost his friends in high places. For example, let us examine the case of Clayton Riley.

Mr Riley is a Black man, a long-time WBAI producer "famous" for assaulting woman. Yet he kept his air-time on WBAI for many years, in spite of physical abuse, profane language, and anti-White racist remarks. Yet he was fired by WBAI for launching a violent physical attack on a woman, in full view of the public, at an earlier PNB meeting =96 just as Erroll Maitland did.

So why was Riley fired for his public assault on a woman, when Erroll was not even slapped on the wrist for his?

Because Riley had committed the foolish mistake of assaulting =96 not just any woman, or "just" a White woman =96 but a Black woman. And one who also happened to be even more highly placed than he, since she was a director of the Pacifica National Board. So in this case, it wasn't justice that triumphed, but simply power politics.

All things being equal, therefore, and absent any special considerations of power or cronyism, an injustice committed against a White person at WBAI, does not seem to generate much concern either among the Black leadership of WBAI, or among their White supporters who pander to them because they need their support to keep their jobs at the station.

Sadly, the comments and behavior of Erroll Maitland are not much different in tone from offensive comments and behavior by others at WBAI, both on and off the air.

For example, Program Director Bernard White allows anti-White remarks and other personal attacks to go out over the air without any comment or explanation or context. In effect, this is tantamount to encouraging and abetting such comments and behavior.

Here is my own personal experience with Bernard White and Erroll Maitland. Shortly after the LSB election in February 2004,

Mr White went on the air with Erroll Maitland and began to disparage, by name, some of the elected members whom he did not like or who had criticized some of his programming decisions in committee meetings or on the list-servs.

Abusing his access to and control of the airwaves, he proceeded to talk about me as one of the "rich people who had bought the elections" [this from memory; the actual sound clip is posted online]. Then he referred to me as "Steve 'mailing list' Brown," falsely implying to his listeners that I had improperly used the station's mailing list to get myself elected.

White then ridiculed others who were elected, as in "Paul=96are you crazy [i.e., for electing him] =96 DeRienzo" and as in "Carolyn 'Bird'" =96 whose name he deliberately mangled, and which he well knew was not "Bird" but "Birden."

And then he pretended he could not pronounce the name "Miguel Maldonado," former LAB chair, and current LSB member, whose name Bernard White had pronounced several thousand times in the past, on and off the air, with no apparent difficulty.

White also spoke about how some people "want to change the complexion of Pacifica, physically as well as politically" =96
a coded bit of race-baiting of the kind that he frequently makes to inflame and confuse his audience, as if to suggest that Pacifica and WBAI are in imminent danger of a coup led by White supremacists, when in fact WBAI and Pacifica are among the most diverse and least racist entities in America.

Then there is the incident in which Bernard White fired Robert Knight as the host of Wakeup Call at the end of last year (in order to take the job himself, usurping over 15 hours of air-time each week =96 more than three times that of any producer =96 in direct and flagrant violation of WBAI's union contract with AFTRA and its agreement with USCOC).

As Knight related it to an audience of 100 WBAI listeners, whom I had invited him to address on the subject, and as he repeated in a widely circulated public letter, Bernard White had warned Robert Knight that "You're playing too much White-man's music on your show" -- and promptly fired him the next day. Forget the cause and effect, and simply look at the words.

But Program Director Bernard White does not limit himself to words or innuendo. He too, like his friend Erroll Maitland, resorts to physical intimidation, as described below.

Many of you know that Mike Feder was a broadcaster on WBAI for over 25 years.

He is not an admirer of Bernard White, and they differ in how the station should be run. Feder often made his views known in private, and Bernard White did not approve. Recently, White began harassing Feder consistently around the station.

Then, abruptly, about 2 months ago, Feder left the station without explanation after 25 years of uninterrupted broadcasting.

When Feder was finally prevailed upon to explain, he did so on the air.

I found what he said to be shocking, but evidently, in spite of the many complaints about
Feder's departure, management did not.

Here is what Feder had to say about his reasons for leaving WBAI. This is just one of numerous incidents he recounts.

Please bear in mind, when you read the following, that Bernard White stands 6-4 inches tall, and probably weighs more than 300 pounds. And that Mike Feder is about 5-4 inches tall, and weighs less than 140 pounds.
<BEGIN QUOTE>

"The last two times I came into WBAI to do my show, Bernard, who really had no business there on Sunday mornings, followed me into the bathroom, cornered me and stood about two inches from my face, looming over me and glaring at me, even blocking my way out of the bathroom. After a minute or so , he stepped aside, but when I went to leave he followed me, banged into my heels and followed right back into the station. He used to, even before these two Sundays, come in and just stand there glaring at me through the glass of the studio... Bernard has a habit of putting his bulk too close to people he doesn't approve of--looming over them. Its just physical intimidation."
<END QUOTE>

Another example, which many will remember hearing about, is Grandpa Al Lewis' on-air account of how Djabel Faye, after becoming Program Director, ran up to Grandpa outside WBAI's control room, shoved his fist in this 85- year-old man's face, and screamed at the top of his lungs, "I have the power over you now, White man!" Faye was not disciplined or even reprimanded for this outburst.

Returning to Clayton Riley: For years this Black program host would openly and loudly taunt White programmer Bob Fass, by calling him "my bitch" in front of other staffers =96 with no response from management or anyone else at the station.

Riley also physically attacked Robert Knight in WBAI's studios, yelling and shouting at him that, "Amy Goodman is a White bitch and you kiss her ass" Again, without consequences.

Clayton Riley, as I alluded to above, had a long history of abusing women, especially White women at the station. (I believe that one woman specifically left the station for this reason.) Although complaints were filed, they were never acted on. For WBAI's management team evidently did not care, or felt it was not politically expedient (or not to their liking), to investigate assault charges by a White woman against a Black man.

Although Clayton Riley's career of verbal and physical abuse spanned Valerie Van Isler's tenure as General Manager, and also the tenures of Samori Marksman, Bernard White and Djabel Faye as Program Directors, no action was ever taken against him by any of them, either for his racist commentaries or his physical violence.

He was supported and protected for years =96 regardless of how many complaints about his anti-White racist remarks and physical abuse were made by staff and listeners =96 until he committed the unfortunate "tactical" error of attempting (as described earlier) to punch out a Black(!) Pacifica National Board member (a female national board member, of course) at a public meeting, on a national radio hookup, in front of an audience of 500 horrified onlookers, during the New York meeting of the Pacifica National Board.

Another example. Just recently, a virulent public race-baiter was promoted to reporter on WBAI's news staff. His name is Fred Nguyen. Of all the anti- White racists at WBAI, Nguyen is among the crudest and most straightforward (as you will see from the quotes that follow, three paragraphs below).

Program Director Bernard White was well aware of Nguyen's 4-year history of virulent =96 and very public =96 anti-White outbursts on the list-servs, and at public venues throughout our signal area.

(Especially after he received a copy of my expos=E9, "When is a racist not a racist at WBAI?" that cited those remarks in detail.)

I suppose we should regard Nguyen's promotion to on-air reporter as =96 what? =96 a reward by the Program Director for good behavior? A recognition of his exemplary service as "attack dog" for the tiny clique of partisans that maintains control of WBAI's management and internal administrative processes by labeling all opponents as "White supremacists"?

Does no one feel that it shreds the credibility of our news department to have an on-air reporter like Nguyen, who is on public record as hurling thuggish racial epithets, like the following:

=96"self-selected white navel gazers,"1

=96 "white know-it-all lefties," 2

=96 "white suburbanite,"3

=96 "White supremacist,"4

=96 "WBAI is ... a...COLORED community,"5

=96 " [white] bigot,"6

=96 "[this is] a white people's list"7

=96 "angry white man,"8

=96 "white boys,"9

=96 "the white man's problem that you and the members of your pack demonstrate,"10

=96 "white men like you,"ll

=96 "white ageing guys,"12

=96 "ageing white leftists,"13

=96 "Your theory of democracy is ... all about white power,"14

=96 "[you are] a self empowered white man who judges other cultures through the lens of a historical predisposition to daily lynching,"15

=96 "No wonder people of color don't trust the white man,"16

=96 "[You support the] lynching mood that is being unleashed against ... [someone] supporting black radicals and people of color"17

=96 "Hitler, himself, used such methods [as yours] ... You're going to have to do better than proposing insipid visions of a color-blind world,"18

=96 "people who oppose affirmative action and call it "quotas" ...[are] racists,"19

=96 "[he] believe[s] that Pacifica should be controlled by white people since Lew Hill happened to be white,"20

=96 "[You] want [to]...reestablish white supremacy in the network, with some colored tokens, just to save the appearances,"21

=96 "[He] and his friends [are] ... trying to disenfranchise the mission constituencies, by denying them a seat at the Pacifica table. White people are always better at 'winning' elections because they have become masters at the art of trickery,"22

=96 "You and your friends are trying to perpetuate white power over Pacifica, and my role is to stop you,"23

=96 "I have a serious problem with the ...warped view ... you and your colorless friends have of diversity,"24

=96 "With all that color blindness and guilt surrounding these smart people ...there is an identity crisis in some so-called white leftist quarters,"25

=96 "the climate of 'whites know best' in this movement is responsible for keeping many constituencies away,"26

=96 " Stating that self-respecting people of color would stand for the racial antics of some of the leaders of the EC takes dream as reality,"27

=96 "she makes a lot of demands for someone who represents perhaps a handful but a vocal group of white folks,"28

=96 "[She is] opposed to any power sharing with people of color and bitterly opposed to people of color leading WBAI"29

=96 "She would not mind an all white LAB"30

=96 " It is very shameful that a sliver of mostly white so-called democrats, who do not represent the listeners at all, would make this attempt at a power grab."31

Who were the above remarks by Fred Nguyen directed against? Every single one of those anti-White smears quoted above was specifically directed, by name, against Carol Spooner and Leslie Cagan (both at the time directors of the Pacifica National Board), Larry Romsted, Dave Fertig (another PNB member), myself, and many others during the struggle to create a new set of bylaws for the Pacifica Foundation.

He has not stopped making these remarks. And he is still a reporter on WBAI's airwaves.

Then there is Janice K Bryant. This WBAI producer was a member of the search committee assigned to find a new general manager for WBAI about 2 years ago.

One day, while on the air, this prominent, influential, and respected WBAI producer

=96 a frequent on-air co-host, personal friend of Bernard White, member of the WBAI LAB and also a national director of the Pacifica Foundation (!) =96 nonchalantly informed her listening audience (actually boasted) that

"... the only way there'll be a white station manager at WBAI is over my dead body."

She was forced to resign from the search committee =96 not because WBAI's management felt she had done anything improper =96 but because management was informed by WBAI's legal counsel that if she remained on the committee the station would be liable to lawsuits from

White candidates who did not get the job, and that the station would probably lose those suits and be subject to huge financial damages.

Here is another stupid (but not less dangerous) recent example of "white- trashing"on WBAI's airwaves.
I refer to Kamau Kalfani's program,

Under the Learning Tree (or Under the Bigotry, as many call it) on which a supposedly serious discussion was predicated on the notion that the sexual inadequacy of European White males is why Whites are predisposed to kill Blacks.

And that Black women shouldn't seek out White men as sexual partners, because they smell bad as a result of not having any "smelanin."

The audio clips are up on the net, uploaded by talkingsticktv@yahoo.com [ca. 30 minutes into segment wbai-200030731-0259.mp3].

On another Kalfani show of only a few months ago [see

http://www.radio4all.net/proginfo.php?id=3D6093 ] WBAI listeners were treated to a learned presentation in which it was pointed out that the word "Jew" was derived from the word "jewelry." )

Or perhaps vice-versa, I never quite understood which.) And that "the Jewish community is the spoiled brat of America."
And not more than a week ago, a WBAI producer attacked me, at an LSB Membership subcommittee, for placing ads =96 that I had created to obtain new WBAI members =96 in publications such as

The Nation magazine and The New York Review of Books. (The ads offered CDs of a WBAI broadcast of Gore Vidal as a membership premium.)

What was her reason for attacking the ads (the first of which, incidentally, has already netted the station approximately $18,000 in profit and 500-600 new members in just 6 weeks)? She explained (in front of the other 10 or 12 committee members) that "we don't need any more rich liberal White men in WBAI's membership."

She also suggested that perhaps I ran those ads, right before the upcoming LSB elections, in order to "pack" our membership rolls with "rich white liberals who won't be expected to vote for people of color." Is this supposed to be a "respected" WBAI producer, role model, on-air personality from whom listeners are supposed to learn about tolerance, diversity, harmony between the races and fulfillment of the Pacifica mission?

As you see from the above, there is simply no shortage of offensive behavior and language in and around WBAI, most of it supplied by a tiny segment WBAI management, producers and staff =96 who, unfortunately, completely control what goes on the station's airwaves, what appears on the station's website, what appears in the station's e-Newsletter to listeners, and what appears in the station's Folio that is mailed to the listeners.

So I could go on and on with examples. .
But why bother? So many listeners know about these and similar examples of race-baiting, "White-trashing," anti-Semitic remarks, and physical assault that I do not need to belabor the claim.

I can only deplore the fact that even good people at the station have become so desensitized =96 or are in such denial =96 that they cannot even hear the ever-increasing onslaught of racist garbage that is being dumped on WBAI =96 dumped with what, I must assume, is the permission, if not outright approval, of our program director and the rest of our management team.

I don't know if everyone has seen it, but there is a Code of Ethics on the Pacifica Foundation website. It proclaims that
"the organization [Pacifica] shall avoid the following: Messages which fuel prejudice, hatred, or intolerance."

Clearly the best way to "avoid" such messages, is to avoid tolerating or associating with those who preach such messages.

That means taking a principled stand. It means not allowing ourselves to become moral cowards =96 whether out of "White liberal guilt" or out of fear of becoming the target of vicious and manipulative name-calling and race- baiting.

One way to confront the problem is to stop describing it in "abstract" terms and being naming those who are responsible. How many are willing to do that?

Not many. Some of our leaders keep retreating behind convenient, evasive (and risk-free) requests for ever more extensive "factual substantiation" of race-baiting, "White-trashing," anti-Semitic remarks, and physical abuse before they will act =96 which means, of course, that however many verified instances of such racism are brought forth, they will never be accepted as "enough" or "sufficient."

Or they will be characterized as the "only" instances =96 the rare exceptions rather than the common rule. Or they will simply be brushed aside, with assurances that, if such "transgressions" ever did occur at WBAI in the past =96 they are no longer occurring now.

So we arrive at this very practical question. How do we gather enough "factual substantiation" of race-baiting, "White-trashing," anti-Semitic remarks, and physical abuse to justify action by management, by the LSB, or by the Pacifica National Board? And by action =96 let me make it absolutely clear =96 I mean immediate and outright dismissal (for "cause") of those who have violated their responsibility not to "fuel racial prejudice, hatred, or intolerance" at WBAI.

Unfortunately, most listeners do not have the foresight, or the resources, to sit before their radios day after day, with tape recorders and memo pads in hand, in order to memorialize offensive anti-White statements as they occur =96 complete with references to the program, the time, the date, and the track =96 so that such statements can be instantly located and publicized, as was able to be done with the "lily white/nigger" statement, quoted above, of Erroll Maitland (who even his friends ruefully admit is a stone cold racist, although only behind his back).

The inability to pull racially offensive air-checks out of a hat, on a moment's notice, does not mean that such remarks have not been made in profusion, by many WBAI personalities, on numerous occasions.

It is sad that a member of the LSB, when shown Maitland's remark about "lily White liberals" and "niggers," said that

"... if Erroll [Maitland]'s [racially offensive] statement had been broadcast over WBAI, there would have been a major protest from [our] listeners, black and white."
Does anyone believe this now?

The fact is, WBAI listeners have indeed been protesting this abusive language and behavior for years? They have complained -- by the hundreds and perhaps thousands -- via postal mail, email, telephone, at LAB meetings, at LSB meetings, at bylaws meetings, at Concerned Friends meetings, and even (when possible) on call-in shows to Samori Marksman, to Valerie van Isler, to Djabel Faye, to Bernard White.

But they were simply ignored =96 or worse, told in stinging on-air rebukes that they were talking like white supremacists who can't stand to see a strong Black man (or strong Black woman, as the case might be) in a position of power or authority.

What complicates this issue even further is that anti-White material is not usually broadcast in as crude and as stupid a manner as Erroll has done (although sometimes it is).

Usually it is a matter of suggestion, or inuendo, or double meanings =96 in a context that gives the perpetrator a cloak of "deniability," such as will allow him or her to look one straight in the eye and say, "You must be mistaken; that's not what I meant at all."

I would now like to add a "pre-emptive" footnote:

I am sure that there will be some who will not attempt to answer the above arguments with counter-arguments. They will, in fact, ignore my arguments and simply claim that I am a racist. Their proof will be =96 simply =96 the fact that I, a White person, have dared to criticize a Black person.

This kind of thing is happening more and more at WBAI.

I see it at LSB meetings -- where, two sessions ago, you may remember, a woman in the audience was asked by a board member, in a rather neutral way, merely if she had jotted down a particular point, only to have that woman jump up and launch into a 13-minute tirade, at the top of her voice, about how dare that board member talk to a Black woman like that, and how she would never have spoken to a White woman this way, etc.

And I see it at committee meetings -- where, as was reported just a few weeks ago, racially inflamed acrimony over a matter that had nothing to do with race resulted in screaming fits, walkouts, and, if I heard correctly, some chair flinging.

I attribute this increasing incivility and race-baiting, in and around the station, to a corrosive atmosphere that has been encouraged and enabled by crude and inflammatory racist statements (there is no other word for them) of people like Erroll Maitland, and the much subtler but no less destructive utterances of people like Bernard White, who use the airwaves to hint at some vast conspiracy to suppress people of color and

turn WBAI into a White fiefdom.

That is the gist of three years of innuendoes, sly digs, and unflattering remarks by the program director on air about certain people in the WBAI community, and more recently and more frequently about members of the Local Station Board, often by name, in unflattering contexts.

Mr. White has consistently used the airwaves to undermine the Pacifica bylaws, the credibility of the new LSBs, and -- most insistently -- the authority, appropriateness, and validity of listener participation in WBAI governance. And race-baiting has been his "argument" of choice. (As when he speaks on-air about sinister people among us who seek to "change the physical complexion" of Pacifica.

Virtually all of the racially offensive quotes I used as examples above seek to instill in listeners' minds the false belief that Blacks are a tiny and beleaguered minority at WBAI, under constant threat of being submerged by an onrushing tidal wave of White racist listeners who are frantically attempting to "take over the station" and "push people of color out the door."

That this scenario is not only untrue, but so far removed from reality as to be ludicrous on its face, has not seemed to deter Bernard or Erroll or some of their acolytes at the station from behaving as if the anticipated White assault was not only a reasonable prospect, but was in imminent danger of become an actuality in the very moment.

The fact is that for the last 15 years the station has been almost totally run by African Americans and people of color. That includes all of its top paid and unpaid positions, as well as management itself.

And the myth of a White Conspiracy to take it over is just that =96 a myth.
No one cared that WBAI was almost totally run and staffed in its top echelon management and departmental positions by Blacks. Because WBAI wasn't a "Black station." It was simply a good station.

Now it is a station with a narrow and strident agenda whose management is attempting to sow racial disharmony where is did not exist before. Mostly this appears to be a tactic for gaining personal power.

Just for the record, people of color now hold virtually all of the top paid positions at WBAI. To wit:

ADMINSTRATIVE: General Manager, Don Rojas; Business Manager & Fiscal Officer, Indra Hardat; Accounts Payable & Assistant to the General Manager, Yvonne Singh; Subscriptions Director, Evelyn Andino; Premiums Director, Paul Ashby; Premiums Assistant, Lambert Marksman [deceased 6/5/04]; Outreach Coordinator, Bok-keem Nyerere

PROGRAMMING: Program Director, Bernard White; Assistant to Program Director, Shirley Irons; Public Affairs Director, Kathy Davis; Producer

of Wakeup Call, Sharan Harper; Host-Producer of Wakeup Call, Deepa Fernandes; Host-Producer of Wakeup Call (Fridays), Mario Murillo; Host-Producer of TalkBack, Hugh Hamilton; Co-Host-Producer of TalkBack (Fridays), Earl Caldwell

NEWS STAFF: News Director, Jose Santiago; Producer-Host of Election Coverage, Robert Knight; Reporters, Eric Williams, Ian Forest, Barbara Day, Gail Walker, Fred Nguyen

OPERATIONS STAFF: Chief Announcer/Engineer, Michael G. Haskins; Maintenance Engineer, Graceon Challenger; Production Engineer, Dred Scott Keyes; Engineers, Errol Maitland, Shawn Rhodes, Sidney Smith, t-dub.

But the myth of the threatened Black "minority" at WBAI has been a useful myth for those who seek to sow hatred and divisiveness as a means of maintaining their personal power and privilege.

Unfortunately, just because something is not true does not mean that a large number of people cannot be made to think it is true.

And although the alleged spectre of White Racism at WBAI is no more real than the alleged spectre of Weapons of Mass Destruction in Iraq, people like Erroll Maitland and Bernard White are trying very hard to make it appear true..

Sadly, this has simply encouraged people to shout "White racist!" when they have a disagreement =96 instead of debating the actual issues involved.

And eventually, even those being falsely accused may start to feel vaguely guilty =96 and begin to wonder if perhaps they actually had been doing what they damn well know they were NOT doing.

That is analogous to right wing "demonizing" techniques =96 as when people like Rush Limbaugh and his Fox network cronies bemoan the supposedly overwhelming preponderance of "liberal media" in this country, until this total fabrication (and could anything be further from the truth?) is almost totally believed by most of the electorate.

It is sad to see at WBAI. And I look forward to the day when it this is no longer the case.

Regards,

Steve Brown

Steve@SteveBrownOnBoard.org
=3D=3D=3D

possibly the fred newmanite cult who fronts for extreme right-wing interests yet represents as a black-run revolutionary party with a bit of anti-semitism thrown in but which is actually run by an all-white, all-male all_self-hating-male Jewish cabal whose sole interest is their control of their harem, their personal privilege and enlarging the group for money prestige and control over more people by infiltrating grassroots organizations to take over or to destabilize depending on who or what is the highest bidder/prospect.

time to maybe buy amy goodmans book and make checks out to infividual programmers (dj's) you support on wbai and definitely for the lady who caught seizures, for the lady to sue.

i too have heard some dj after bob fass's show play gangsta rap with all the 7 words kept in and with the phrase clearly repeated many times "kill the P" where it was unmistakenly meant to mean "kill the police" which if any listener who is demented claims as a defense they were goaded by the music and comments of a particular dj on wbai would spell the end of wbai,

yet when i complaineof a similar instance to keyes and pointed out on-air that it was a licensure and litigation and liability issue, I was told "well you can always turn the dial" and was cut off.

so much for anyone in charge of wbai caring what happens to wbai other than what they can loot from it in the short run till their fuhrer's contract runs out.

racism is always dumb.
and those who espouse it always stupid...and usually do so to cover up their own psychic or personal integrity deficits.

but when people are allowed to use force to enforce their barbarity, well, and lies to justify such bullying, maybe it is time not to pay them to do so. ix_pho.

Amateur Radio Newsline™ Report 1401 June 18, 2004

Now, Amateur Radio Newsline report number 1401 with a release date of Friday, June 18 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. A new ham-sat is made ready for launch and the B-P-L struggle continues. Find out the details on Amateur Radio Newsline report number 1401 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: ECHO PREPARED FOR LAUNCH

The soon to be launched ECHO ham radio satellite has arrived safely at the launch complex in Russia and is being made ready for launch. This, according to Chuck Green, N0ADI, who is traveling with the bird to the launch facility. Bill Pasternak, WA6ITF, is here with more:

--

According to Green, once he and the team arrived at the launch site, the satellite shipping containers were opened and placed in the clean room. ECHO was taken out of it's shipping case and set up for completion. The bottom antennas were then installed.. So was the bottom solar panel, magnets, and corner reflectors.

ECHO was then powered on and the team successfully communicated with it over a hard wire connection from a computer. The four two meter receivers and the two 70 cm transmitters were all successfully tested. And that's good news for everyone waiting for the new hamsat
to take its ride into space.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, in Los Angeles.

--

Currently the planned launch period for ECHO is four weeks beginning June 28th. Once in orbit the command teams will be working together to assure everything is working OK and get ECHO into its initial 'normal' modes as quickly as possible. After that it will be open to the users in the ham radio community. (AMSAT)

THE BPL FIGHT: AN UPDATE ON WHAT'S HAPPENING IN THE USA

The fight to keep Broadband Over Powerlines from going nationwide continues. Amateur Radio Newsline's Mark Abramowicz, NT3V, is here
with the latest:

--

With summer now here, expect the Broadband over Power Line Internet access issue to heat up - especially as more people get a chance to look over the latest filing from the National Telecommunications and Information Administration.

The federal agency, which advises the White House on telecommunications policies and oversees radio spectrum used by government agencies, weighed in with more BPL comments in a June 4 filing with the Federal Communications Commission.

And the American Radio Relay League and others who've analyzed the comments say it's clear the political considerations are overshadowing the engineering data which raises many questions about the viability of BPL.

In its filing with the FCC, the N-T-I-A's policy makers now call BPL a win-win situation for all and make what some call an outlandish claim - that deployment of the technology could actually lead to reduction, that's right, reduction of power line noise.

Now, the engineering types who've been studying the BPL and doing all kinds of test measurements are really scratching their heads trying to make sense out of that. The N-T-I-A filing also contains this comforting assertion for BPL opponents. It says that the current power line system is responsible for even greater local interference risks than what BPL would bring.

And, it says, B-P-L operators would implement procedures to eliminate any harmful interference.

The stack of complaints about BPL test sites and assertions by a lawyer representing one of the large utilities testing the technology might lead some to question that reassurance.

A source tells Amateur Radio Newsline the FCC has failed to "properly direct" BPL complaints to the appropriate FCC regulatory office for action. And, the source says, commissioners questioned about that haven't offered any explanation.

And a lawyer who has commented in writing to the FCC about some of the BPL complaints his utility company received claimed there was no basis for them, essentially saying the amateur radio operators making them don't know what they're talking about.

One thing the NTIA did suggest in its filing is the exclusion of certain bands and frequencies in specific geographical areas to protect critical government systems.

Does that suggest an agency confident BPL won't be an interference source?

The American Radio Relay League and others who've been vocal in this fight suggest otherwise.

They say BPL is far from a done deal and they're hopeful that the FCC's extension of reply comments to June 22 will net some helpful information. And, they say, they're not giving up or going away quietly.

In the meantime, there is a sense BPL is on a fast-track at the FCC where the majority of the commissioners view it as an engine to help stimulate the economy.

Could the FCC act on the BPL issue before the November election?

Anything is possible. And some close to the BPL debate say if the Bush administration believes it will generate a much-need bump in the public opinions polls or at the ballot box...well, you get the idea.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Mark will continue to monitor the B-P-L situation and report back in future Amateur Radio Newsline reports. (ARRL, CQ, Repeater Journal, Published news reports, others)

**

THE BPL FIGHT: AUSTRALIA REACTS TO THE BPL CHALLENGE

The United States is not the only place planning to introduce this controversial Internet access technology. Proposals for Power Line Communications or Broadband over Power Lines in Australia have become a concern many spectrum users down-under. This includes the Wireless Institute of Australia which is that nations Amateur Radio national society. From Brisbane, Q-News Graham Kemp, VK4BB, reports:

--

WIA President, Michael Owen, VK3KI has said that the WIA's position in relation to B-P-L is that it supports increasing broadband access and broadband competitiveness in Australia, but in a way that does not cause interference to legitimate users of the High Frequency spectrum. The WIA supports the development by the ACA of policies for BPL that protect existing users.

The WIA believes that one of the problems associated with B-P-L is that trials on a limited basis are not good indicators, and that the full effects of a problematic technology will not be seen with such trials. The WIA considers that B-P-L will not really serve the community's long run needs because of its limited bandwidth. A deep fibber network is to be preferred to using long runs of power lines.

The WIA has appointed a team to deal with this issue. WIA President has appointed Phil Wait, VK2DKN the director responsible for developing and advocating the WIA's position in relation to BPL. He has asked Owen Duffy, VK1OD Barry White, VK2AAB and David Wardlaw, VK3ADW to assist Phil, as the WIA's BPL Team.

--

A report on a recent small trial of B-P-L in the city of Hobart to some 4 houses and 2 floors of one building is on the WIA website. (Q-News)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the VE9BSQ repeater serving St. John, New Brunswick, Canada.

(5 sec pause here)

**

RADIO RULES: COMMISSION ADOPTS SPECTRUM SHARING PLAN FOR L AND S BAND

The Federal Communications Commission adopted a spectrum sharing plan for low earth orbit satellite systems in the 1.6 GHz and 2.4 GHz bands. The so-called Big Leo birds. And here's how it will work

In the 1.6 GHz or "L-band," mobile-satellite service operators with satellite systems that utilize code division multiple access and time division multiple access technologies will share 3.1 megahertz of spectrum at 1618.25 to 1621.35 MHz. At "S-band," the Commission allocated the 2495 to 2500 MHz band to fixed and mobile except aeronautical mobile services, in order to provide additional spectrum and to accommodate the relocation of Multipoint Distribution Service channels 1 and 2.

The commission says that its new spectrum sharing plan will further the agency's goal of efficient frequency utilization by increasing the number of providers offering services to consumers over the same spectrum. It will promote the deployment of more innovative services to consumers. (FCC)

**

ENFORCEMENT: COUNTY HAS DONE NOTHING WRONG

The FCC says that a complaint that a county is using ham radio for its routine business is without merit. The agency's Daryl Duckworth, NN0W, is here with more:

--

Duckworth: "A complaint concerning Bell County Communications
Center
and club license W5BEC was dismissed. There is no showing that this
station is operated by anyone other than amateurs, nor is there a
showing that it is there a showing that it is used or intended to be
used for routine county business."

--

W5BEC is the club station license issued to the Bell County Emergency
Operations Center in Belton, Texas. Its also the call sign of a wide
area two meter repeater that covers much of central Texas. (FCC,
RAIN)

**

ENFORCEMENT: STAY OFF 10 METERS

Meantime, the FCC's crackdown on 10 meter unlicensed intruders
continues. This time the agency acts in a New Jersey case. Again,
the FCC's Daryl Duckworth, NN0W:

--

Duckworth: Auto Elite Transportation of Morristown, New Jersey, has
been sent a warning notice about a vehicle of theirs; truck number
2113, as being the source of unlicensed radio transmissions on 28.085
Mhz."

--

Auto Elite was warned that continued unlicensed operation of radio
transmitting equipment without is a violation of Section 301 of the
Communications Act. That it could subject the operator to fine or
imprisonment, as well as seizure of any non-certified radio
transmitting equipment. Monetary forfeitures for this kind of
violation normally ranges from $7,500 to $10,000. (FCC, RAIN)

**

ENFORCEMENT: SAN DIEGO'S 96.9 MHZ PIRATE REACTIVATES

According to a news bulletin from Chris Carmichael appearing in the
CGC Communicator, San Diego's 96.9 MHz pirate is back on the air.
Chris says that there is no news on the location of the transmitter,
but he believes that will only take the Commission a short time to
figure out. (CGC)

**

ENFORCEMENT: SPAMMER GOES TO JAIL

A New York state man who sent out millions of "spam" e-mails has been
sentenced to three and a half to seven years in prison. This

according to a May 27th news release from that states Attorney General's office which said that Howard Carmack, known as the "Buffalo Spammer," received the maximum sentence for 14 counts of identity theft and forgery.

A spokesman for New York Attorney General Eliot Spitzer said that Carmack sent out hundreds of millions of bulk e-mail messages. That he flooded inboxes and saddled Internet providers with millions of dollars in costs. But it was his use of stolen identities and forged addresses that caused action by state prosecutors. New York has no state laws specifically dealing with spam. Carmack was found guilty of violating state forgery and identity-theft laws in April.

Internet provider EarthLink Inc. won a $16.5 million judgment against Carmack last year, and EarthLink officials testified in the criminal trial as well. (Published news reports)

**

EMERGING TECHNOLOGY: EARTHLINK VS. PHISHERS

Meantime, EarthLink claims that it has developed a program to fight phony websites like this,. The sites, called phishers are those designed to deceive e-mail users into providing personal information such as passwords and credit card or Social Security numbers.

Phisher sites pronounced "fishers" but with a leading "p" are called
that because they "fish" for personal information that can be used in identity theft. They work by telling an Internet user via e-mail that there is a problem with the service-provider account and providing directions to a Web site for clarification. The link takes the user to a hoax Web site that may be a perfect copy of a real page used by Earthlink, eBay or another legitimate business. That is where the user is deceived into providing personal information.

EarthLink's anti-phisher program will rely on a list of known fraudulent sites. When a subscriber responds to the e-mail message, he will be linked instead to a special Web page that warns the e-mail is a fraud. The site also will provide a chance to report the hoax attempt.

EarthLink says that it receives about 40,000 telephone calls or e-mails each month from subscribers who have received one of the fraudulent e-mails. (Earthlink)

**

HAM RADIO BUSINESS: A SEARCHABLE CQ MAGAZINE ARCHIVE

Finding an article or an advertisement in a back issue of CQ Magazine is about to become only a mouse click away. This, as CQ Communications and Buckmaster Publishing announce plans to create a searchable on-line archive of CQ magazines back issues.

Buckmaster, which produces the Hamcall CD has for decades filmed issues of CQ onto microfiche for use by researchers and hobbyists. Buckmaster also provides advanced scanning and searching technology for on-line posting of documents for major corporations. Now this same technology will be applied to back issues of CQ.

As currently envisioned, searches will be free, while access to reading and printing specific pages will require a subscription at a nominal fee. Eventually Buckmaster plans to have every issue of CQ available dating back to the magazine's first issue in January 1945.

A beta test version covering CQ from 1990 to 2002 is already on-line. The archive may be accessed at http://hamcall.net/cgi-bin/cqcgi. (CQ)

**

WITH ARNEWSLINE: YHOTY NOMINATIONS CLOSE JUNE 30TH

And a reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award closes midnight on Wednesday, June 30th. If you are planning to nominate a youngster for this years award or, if you want to update a previous years nomination -- and have not yet done so -- you have only about two weeks left to do so.

The Young Ham of the Year Award program is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states. He or she must have made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org.

Again, the cutoff for nominations this year is midnight on June 30th. The award presentation takes place in August at the Huntsville Hamfest in Alabama. (ARNewsline(tm))

**

BREAK 2

This is ham radio news for today's radio amateur. From the United
States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: INSTANT MESSAGING EXPANDING WORLDWIDE

Wonder where some of your ham radio buddies are these days? Maybe they are now using Instant messaging instead of 2 meter FM. Norm Seeley, KI7UP, has more:

--

According to Tech Web News, Instant Message use is growing steadily among corporate workers who use free services from companies like America Online, Microsoft, and Yahoo to send quick text messages to coworkers, family, and friends. And by 2008 closer to 80 percent of corporations worldwide are expected to use either public or private Instant Messaging networks.

A recent study by The Radicati Group says that by 2008 the number of Instant Message users worldwide is expected to reach 670 million. Business wise, this equates to revenues in the $413 million range.

Even so, the percentage of people using public networks and private networks is expected to remain the same. That's at 88 percent public and 12 percent private, respectively. The reason: Its hard to get people to pay for what someone else is giving away for free.

For the Amateur Radio Newsline, Norm Seeley, KI7UP, reporting.

--

Ham radio groups are also turning to Instant Messaging. According to Internet postings, it comes in handy when there is a net to be held and propagation goes away. (TechWeb Online)

**

HAM INTERNET NEWS: THE VHF REFLECTOR BACK ON LINE

And speaking about instant messaging, or almost instant messaging, news that the VHF Reflector is back on line. This, according to Bob Vaughan, KC6SXC, who oversees the systems operation.

In a posting, Vaughn explained that the W6YX server that hosts the VHF Reflector suffered a disk failure and was off line for the past month. Vaughn says that the team has now recovered the data from the failed disk and has put the system and the Reflector back on-line. (VHF Reflector)

**

ON THE AIR: KY REPEATER NEEDS A NEW HOME

The Repeater Journal reports that the Danville, Kentucky, 146 point 655 WD4DZC repeater is looking for a new site. According to trustee George Griebe, WQ4Z, the tower supporting the systems antenna is to be taken down and will not be replaced.

Griebe says that the Wilderness Road Amateur Radio club which sponsors the repeater plans to keep it on the air from a temporary location with reduced coverage. Meantime the club is continuing its

search for a suitable, high level, wide coverage permanent site. (Repeater Journal)

**

THE SOCIAL SCENE: OHIO IN JULY

Turning to the ham radio social circuit, the 7th annual OH-KY-IN hamfest is slated for the July 24th at the Diamond Oaks Career Development Center in Cincinnati Ohio. The event will feature commercial vendors, a flea market and much more. Information is on line at www.ohkyin.org or by e-mail to n8bv@juno.com. (OH-KY-IN)

**

THE SOCIAL SCENE: COLORADO IN JULY

And the Northern Colorado Amateur Radio Club will hold its 2004 Superfest at the Budweiser Events Center in the Larimer County Fairgrounds on July 17th. Talk-in is on the 145.115 Mhz repeater with a 100 hertz tone access. For information on this one contact Willis Whatley, WA5RVL, at his Callbook address. (E-mail)

**

INTERNATIONAL - GREECE: HAM RADIO AT THE SUMMER OLYMPICS

Some more good news for foreign radio amateurs visiting Greece for the Summer Olympic Games. From the August 1st through September 15th hams from CEPT signatory nations will be permitted to operate in Greece without the need to submit any papers for a license. They will also be allowed to use the special prefix J42004. Meantime, Greek radio amateurs can use the special prefixes SX2004 or SY2004 through the 15th of November in celebration of the games. (GB2RS)

**

DX

In D-X, word that MM0AFJ will be on the air from the Island of Harris. This, from the 27th of June until the 2nd of July, mainly in the mornings on 80 to 10 meters CW and SSB. There may be some activity on 160 meters in the evenings. Requests for skeds should be sent via e-mail to m0afj@tiscali.co.uk. QSL direct to MM0AFJ at his Callbook address. (RSGB)

Also, IK4RUX reports he will operate portable IF9 on HF SSB from Favignana between the 19th and the 26th of June. Side trips to other islands in the Egadis group as well as some lighthouse operations are also possible. QSL to the operators home call or via the bureau. (RSGB)

**

THAT FINAL ITEM: HAM RADIO HONORS THE MEMORY OF PRESIDENT RONALD REAGAN

And finally this week, ham radio finds a way to honor the memory former President Ronald Reagan. Here's Bruce Tennant, K6PZW with the
rest of the story:

--

Two suburban Los Angeles area radio clubs are joing forces to honor the memory former President Ronald Wilson Reagan. This, by operating Field Day in his honor from the Reagan Library in Simi Valley, California.

According to Peter Heins, N6ZE, the two groups joing forces to honor the late United States president are the Ventura County Amateur Radio Society and the Conejo Valley Amateur Radio Club. The Ventura County group has operated Field Day before from the Reagan Library. This year, the Conejo Valley club will be joining with them for the first time.

Heins says that 2004 is the fourth year a special event will have been held at the Reagan Library using the special N-6-R call sign. The previous three were dedicated to all members of the former first family. This years Field Day operation will be specific in its remembrance of President Reagan who died of Alzheimer's disease on
June 5th at age 93.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Field Day 2004 is the weekend of June 26th and 27th. Visitors to the Reagan Library will be able to listen in on amateur radio communication, talk to amateur radio stations located in other countries, and find out more about obtaining an FCC Amateur Radio License of their very own.

Also, the complete Field Day rules are on-line at the ARRL website. Its in cyberspace at www.arrl.org (N6ZE)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,

Arcadia, California 91066.

Again, the cutoff for submitting nominations for this years Young Ham of the Year Award is midnight on June 30th. The award presentation takes place in August at the Huntsville. Full details are on our website at www.arnewsline.org

Also, don't forget Field Day the weekend of June 26th and 27th. We'll see you on the air.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don
Wilbanks, AE5DW, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

# 1534. WTB: AM station. The "Radio Crazy" is baaaaakkkkk!!! Hi!

Newsgroup: rec.radio.broadcasting
Date: 2004-06-24 17:25:10 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <cbf2pm$36u$1@xuxa.iecc.com>
Source record: 4873

Wanted to buy:

I want to acquire a "Dog" cheap AM radio station. Any market considered. Need not be profitable. Can even be "dark" as long as FCC license is intact.

Stations with seller financing and/or real estate preferred. I do NOT want a "pure" daytimer! Station must have at least 50 watts of night power authorized.

I prefer stations that are NOT repeat NOT directional!

Asking price must not exceed $150,000.

Finders fee paid to any telling me about the station should I actually acquire it.

Tel: (478)741-1710 in Macon, GA.

I am a semi-retired broadcast engineer. The "Radio Crazy" ain't that crazy. My last job in radio was Chief Engineer for a 5 KW fulltime directional AM in New York City.

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"
aka Moron Gottesman

CCS,

The NRA has had both Radio and TV Programming for several years.

They are now consolidating their efforts into a Network and then
will provide 'content' for distribution to Radio and TV Stations;
including Cable and Satellite Systems.

The NRA "Network" will be around for many years to get out the
NRA's Message to the American People.

Perhaps because Air America has every intent to remain in
business--they just happened to come on the air during an election
campaign.

Perhaps you can tell us what your problem with the First Amendment is.

This kind of theory is interesting but pretty far-fetched. It's much simpler than that. Awesomely bad management with a truly faulty business model. It's that simple.

I think it was a bunch of cocky TV "radio can't be very hard" people who came to realize that lying about their bank account and ridiculing the head of the two major markets they needed the most wasn't the best approach.

If Rush Limbaugh, with 600+ stations, can't influence an election, Air America with 6 isn't going to have much better luck.

Rich

The purpose of these posts is to expose most of the whole lot as a bunch of pathological liars. Those few who don't lie are reluctant to publically point fingers at the liars and expose those hosts do. I'm talking about those who continually commit FCC broadcast law violations. (Like lying about consumer products for personal profit and dispensing false medical "information" , thus making people sick or even die!) These guys (and a few women) are members of a "good-ole boys talk show host club" who adhere to an unwritten code- to not step on each others toes. Frankly, those few who don't use their broadcast pulput to expose the lies of their fellow broadcasters-have no spine or credibility in my view!

I'll post about 50 of them here in the next few weeks.

O.K. here we go:

1. "Styrofoam is bio-degradable" (Said by a national talk show host
in "rebuttal" to those who call for a ban on the use of styrofoam
packaging because the stuff ends up along the roadside and in peoples'
yards- mainly because the industry refuses to take meaningful steps to
promote recycling.) The host may have been paid for promoting the use
of styrofoam by lying about its properties.

2. "Dioxin is NOT a health hazzard!" (Yeh, sure! Neither is
breathing asbestos!)

3. In defense of S.U.Vs: "Detroit is now making fuel-efficient
S.U.V.s" (Yeh, sure! )

4. Just after the Rhode Island night club fire that killed all those
people-in reply to a caller: "Sir, that night club HAD MET ALL LOCAL
FIRE SAFETY CODES!"

5. "There is nothing that you or I eat that is on the endangered species list!" (Yeh, sure- except Cutthroat trout, sturgeon, sockeye salmon, key deer, oyster mussel and a few hundred others!)

6. "50% of our oil comes from Saudi Arabia." (The correct answer is 17%)

7. "Half the price you pay for a new car from Detroit goes to pay for the health care plan of auto workers!" (yeh, sure!)

LOTS MORE TO COME. Talk radio is saturated with lies!

Or, he simply may be stupid or just uninformed. I have not seen much of a
styrofoam lobby out there.
>
> 2. "Dioxin is NOT a health hazzard!" (Yeh, sure! Neither is
> breathing asbestos!)

Stupid. Talk hosts are hired for entertainment value, not knowledge (witness
Dr. Laura, a physiotherapist).
>
> 3. In defense of S.U.Vs: "Detroit is now making fuel-efficient
> S.U.V.s" (Yeh, sure! )

They are. There are several hybrid SUVs in pre-production stages.
>
> 4. Just after the Rhode Island night club fire that killed all those
> people-in reply to a caller: "Sir, that night club HAD MET ALL LOCAL
> FIRE SAFETY CODES!"

As to the building, apparently they had. The issue was with the pyrotecnics
of the band.
>

> 5. "There is nothing that you or I eat that is on the endangered
> species list!" (Yeh, sure- except Cutthroat trout, sturgeon, sockeye

None of which have I eaten, now or ever. "You and I" could easily mean
that
very few of us dine on sturtgeoun, venison, etc.
>
> 6. "50% of our oil comes from Saudi Arabia." (The correct answer is
> 17%)

Stupidity, not necessarily a lie. Most of the US' oil comes form
domestic
sources, Canada, and Latin America.

> 7. "Half the price you pay for a new car from Detroit goes to pay for
> the health care plan of auto workers!" (yeh, sure!)

Wrong, but not that far off. A huge percentage goes to fund pensions
and
health care for present and past workers.
>
> LOTS MORE TO COME. Talk radio is saturated with lies!

Or, simply, stupid hosts engaged in discussions on subjects they are
not
fully informed on.

You are making too much out of small issues.

Actually, there were fire code violations. The most important of
these
was that the stage walls had been lined with flammable packing foam as
a cheap form of sound insulation. Definitely against fire code;
problem
is, the local fire inspector didn't notice it on the last inspection
he
did there.

To bring this marginally back on topic... Among the many parties
being sued is a radio station which gave away tickets to the show.
(Never underestimate the ability of lawyers to go fishing after the
deepest pockets they can find...)

Despite your cuteness, in case you haven't read, some independent
interpretations of trends show that Franken is *beating* Limbaugh in
New York and in the Chicago market before AA was pulled by
Multi-Cultural, the audience doubled to a 2.0, which may not be much
compared to WLS but is still better than *either* sports talk station
in town and in the neighborhood of the mid-rank numbers NPR station
WBEZ gets.

It's too early to tell, but Air America may just succeed despite all
of their bumbling.

The only "independent interpretation of trends" that matter are those that are accepted by ad agencies, especially in the network business.

To my knowledge, there are none, especially ones that break out hour-by-hour figures.

This is not an endorsement of Rush, but I'm not sure I agree with your premise there. While the Limbaughs of the world perpetually are preaching to the choir, IMO they are responsible for getting a fair amount of people to the polls who might otherwise sit home on their a**. To me, that's at least potentially influencing an election, particularly a close one.

I have no problem with the First Amendment. I have just stated that
I believe that the people behind AA have no intention of "making it
a success". Of course, you can't admit that, and will deny it
whenever it comes up.

# 1549. Amateur Radio Newsline™ Report 1402 June 25, 2004

Amateur Radio Newsline™ Report 1402 June 25, 2004

The following is an advisory and not necessarily for air. Ladies and gentlemen, Amateur Radio Newslines' Support Fund Administrator, Andy Jarema, N6TCQ:

--

This is Andy Jarema, N6TCQ, Newsline Support Fund Administrator, getting caught up with our supporters. In the month of September of last year we heard from Benton Bonney, W4PE of Orlando; monthly contributor Joseph Bartzi, Jr., KC8DKF of Columbus, OH; the St. Charles, MO ARC, WB0HSI; monthly contributor William Walters, WA2IBM, of San Jose; monthly contributor Scott Hensley of the Area Communications Team, also in San Jose and the Anchorage ARC.

Of special mention was support received in memory of the late Roy Neal, K6DUE, by the Brackett family of Cerritos, CA. Our thanks to Sharyn, Jim, KE6FVN, David, KE6OPK, and Lynn, WA6HBS.

Thank you to everyone, and we promise to do our best to continue to earn your care and support. A reminder that Newsline is a 501c 3 California non-profit corporation. FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast.

I'm Andy Jarema, N6TCQ.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1402 with a release date of Friday, June 25 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Changes coming to ham radio in New Zealand and maybe to the 40 meter band here in the United States. Find out the details on Amateur Radio Newsline report number 1402 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: A NEW HAM RADIO IN ZED-L

Big changes appear to be in store for ham radio in New Zealand. This, as the current licensing system is replaced by one test and one class of ham radio operator. ,Jim Meachen, ZL2BHF, is in Auckland

where its all taking place:

--

Here's the bottom line. Our current New Zealand Amateur Radio licensing system is being renovated. We now have only one class of ham radio license in Zed-L called the General Amateur Radio License. This is just one of many changes coming to ham radio down-under as New Zealand radio amateurs discover the full outcome of their regulatory authority's review of the Amateur Radio service. It's all good!

The changes started on June 17th when a new revised Schedule attached to the Zed-L license came into effect. A Schedule here in New Zealand is kind of like a new set of rules. That's the first step. Other changes will take effect over the next 18 months or more. Many long standing problems are being eliminated and some of the changes are believed to be world firsts. Under the new structure there will be only one grade of Amateur operator license in New Zealand. That's the General Radio License that I mentioned earlier. One license means only one test needs to be administered.

A newly-licensed amateur will have immediate access to all amateur bands below 5 MHz and to all amateur bands above 25 MHz. After getting experience over 3 months and with at least 50 contacts logged, access is then permitted to all amateur radio bands.

All existing Limited Amateur licensees automatically became General Amateur licensees on June 17th irrespective of what is written on their existing licenses. There being only one license grade, callsigns will no longer indicate a class. There is already an established procedure to request a change of callsign if a licensee so wishes.

All amateur bands remain the same but a newly-extended Low Frequency band 130 to 190 kHz is being listed for the first time as an amateur allocation.

The permitted maximum transmitter power output for an amateur station on all bands is 500 watts P-E-P. With only one figure, the maximum power level in New Zealand is now mode-independent.

How about visitors to New Zealand? Touring hams holding a current amateur certificate of competency, authorization, or license issued by another administration, may operate an amateur station in New Zealand under a General User Radio License for visitors. A licensed visitor will be granted similar privileges to a New Zealand resident station for a period not exceeding 90 days. The present country-to-country reciprocal license agreements will disappear in time as more countries directly recognize the licenses issued by other administrations. This will make cross-border travel by radio amateurs a lot easier than it is today.

There are now minimum rules and restrictions for Amateur Radio in New Zealand and the future is positive.

For the Amateur Radio Newsline, I'm Jim Meachen, ZL2BHF, reporting from Auckland.

--

With one license exam, one license grade, and with new and simplified procedures, New Zealand telecommunications regulators say that they have positioned that nations Amateur Radio Service for an exciting future. (ARNewsline(tm), ZL2BHF, Q-News)

**

RESTRUCTURING: FCC RELEASES NPRM ON 40-METER CHANGES

The FCC says pending changes in the 40-meter amateur band as a result of the 2003 World Radiocommunication Conference will improve spectrum efficiency. It said so in a rule making notice dealing with the 40 meter band. Norm Seeley, KI7UP, has the latest:

--

The ARRL Letter reports that this remark came in an FCC Notice of Proposed Rule Making in ET Docket 04-139. This is an inquiry that seeks public comments on proposed rule changes to complete domestic implementation of various World Radiocommunication Conference allocation decisions made in 2003. Among them the future of the Amateur Service 40 meter allocation.

The regulatory agency says that it anticipates that administrations in I-T-U Regions 1 and 3 will, in the near future, authorize phone emissions in the 7 point 150 to 7 point 200 MHz band segment. The FCC notes that the ARRL has requested that the United States frequency segment for phone emissions be expanded to 7 point 125 to 7 point 300 MHz. The FCC says that authorizing voice operations in this band segment would permit same-frequency US-to-DX contacts, resulting in increased spectrum efficiency.

The N-P-R-M also addresses the deployment of Earth Exploration Satellite Service-Active spacecraft in the 70-cm band. The Commission says that this operation should not cause harmful interference to, nor claim protection from, any other services allocated in the band in the United States. This includes the Amateur Satellite service as well as any others.

For the Amateur Radio Newsline, Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

Comments in the proceeding are due July 16, with reply by August 2. Interested parties may view the entire NPRM, file comments and view comments filed in ET Docket 04-139 via the FCC's Electronic Comment

Filing System at www.fcc.gov/cgb/ecfs/ (ARRL)

**

RESTRUCTURING: NO VANITY CALLS IN THE UK RIGHT NOW

Vanity callsigns 'are unlikely to be introduced in the United Kingdom before March of 2006. This, according to the Radio Society of Great Britain which says that for the last three years it has been in discussion with licensing authorities over the introduction of such a program for U-K amateurs.

The latest word is that telecommunications regulators have informed the RSGB that due to software issues it is unlikely that vanity callsigns can be introduced before March 2006. In other words, the waiting goes on. (RSGB)

**

More news in a moment, but right now its time for you to identify your station. Linda Reader, N-7-H-V-F, if you please: "From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W7FP repeater serving Salt Lake City, Utah."

(5 sec pause here)

**

THE BPL FIGHT: ARRL JOINS IOWA HAM IN BPL INTERFERENCE STRUGGLE

The ARRL has joined in the fight on behalf of Iowa amateur and ARRL member. This, following complaints from Jim Spencer, W0SR, of Cedar Rapids, that he has suffered severe Broadband Over Powerline interference for more than two months.

According to the ARRL Letter, a formal complaint to FCC Enforcement Bureau Chief David H. Solomon calls on the Commission to order Alliant Energy's B-P-L field trial system to shut down. It also demands that the agency fine the utility $10,000 for violating the Communications Act of 1934 and FCC's Part 15 rules.

Alleging that the ongoing interference is both harmful and willful to one or more licensed radio station the ARRL asked Solomon to intervene on an emergency basis. ARRL Chief Executive Officer David Sumner, K1ZZ, who signed the letter of complaint, said Alliant Energy has been aware since March 30th. Thats the date it installed Amperion BPL equipment in Spencer's neighborhood and the interference began. (ARRL)

**

ENFORCEMENT: EX-KG6IRO FINED $10000 FOR UNLICENSED OPERATION

A man who challenged the FCC and the southern California ham radio community has been fined $10,000. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the latest on a person who the F-C-C has told to stay off the air:

--

The FCC has issued a $10,000 Notice of Apparent Liability to Monetary Forfeiture -- that's a fancy way of saying a fine -- to Jack Gerritsen, the at least temporarily former KG6IRO. This, for operating a radio station in the Amateur Radio Service without the authorization from the FCC to do so.

In a June 15th letter to the Bell, California, former licensee, the regulatory agency notes his past record of non compliance with, among other things, its orders to keep off the air. It also notes his previous conviction for interfering with police radio communications in 2000 and the November 14, 2001 decision by the FCC to set aside his ham radio ticket based on complaints about the operation of his stations. Kit also raises questions regarding his qualifications to be a Commission licensee in light of his 1999 arrest and 2000 conviction on the police radio jamming charges.

At the time of the license set aside Gerritsen was warned that he has no authority to operate radio transmitting equipment. That doing so would be considered to be a violation of Section 301 of the Communications Act and could subject him to monetary penalties or imprisonment.

But on December 9th 2001, the Bell, California Police Department notified the FCC that it had received complaints against Gerritsen for making radio transmissions. On December 28th of 2001 the FCC's Los Angeles Office issued a warning letter to Gerritsen for unlicensed operation, and basically told him to get off the air. On January 2, 2002 Gerritsen replied and asserted that the set aide of his license was improper. On January 29th, the Bell Police and the California Highway Patrol arrested Gerritsen on a probation violation charge. On May 7th of 2002 he was found guilty of the parole violation and sentenced.

Soon after his release on July 28th of 2003 the FCC began getting complaints of unauthorized transmissions over local Los Angeles area amateur, business band and public safety repeaters. The complaints alleged that the person making the transmissions identified using the call letters KG6IRO. An investigation was launched. This lead to an agent positively identifying Gerritsen on November 6, 2003 as a person holding a transceiver while the investigator recorded the radio transmissions he was making. The investigation continued with the FCC identifying Gerritsen as the interference source on November 7th 2003 and on February 9th of this year.

Now, based on what the FCC cites as conclusive evidence it has levied the $10,000 fine against Gerritsen for willful and repeated

violations of Section 301. As usual, Gerritsen was given the customary 30 days to pay up or to file an appeal.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Word is that Gerritsen has responded to the FCC with a demand that the agency rescind the fine. He reportedly claims that his license granted on November 14th 2001 has not been terminated, revoked or in any way modified to prevent him from being on the air. (FCC)

**

ENFORCEMENT: THE FCC ENFORCEMENT LOG

Gerritsen is not the only ham radio enforcement story making news this week. With more, heres the FCC's Daryl Duckworth, NN0W:

--

DO NOT READ: Audio report only. Hear it in the newscast at www.arnewsline.org

--

More ham radio enforcement news in upcoming Amateur Radio Newsline reports.

--

ENFORCEMENT VICTORVILLE CA PIRATE STILL ON THE AIR

A pirate broadcaster in Victorville, California, is still operating full time on AM 660 and FM 91.3. This, in defiance of FCC actions to shut it down.

Back on March 31st, the FCC issued a $20,000 fine to alleged station owner Stanley Mark Mayo. This, for willful and repeated violation of Section 301 of the Act for operating radio transmitting equipment without the required Commission authorization.

None the less, the stations remain on the air leading to speculation that another level of enforcement action might be taken. One that could lead to seizure of the broadcast equipment and jailing of those who put the stations on the air.

For a look at the Commission's action on these stations, see www.fcc.gov/eb/FieldNotices/2003/DOC-246123A1.html (CGC, others)

**

RESCUE RADIO: A 100 WATT TRAVELERS INFORMATION STATION AT LAX

The FCC has granted a request by the managers of Los Angeles International Airport for a ten fold power increase to their Travelers Radio Information Radio service. On December 4, 2002, managers filed the application that asked to increase power from 10 to 100 watts. The reason for the increase was to facilitate the airport's efforts to provide emergency communications to the traveling public in the event of a terrorist attack. The FCC has now granted the 100 watt request, due, it says, to the circumstances involved. More on this story is on-line http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-03-3843A1.doc (CGC)

**

THE SOCIAL SCENE: NEBRASKA IN JULY

Turning to the ham radio social scene, Nerbraska's Pioneer Amateur Radio Club will hold its flea market on Sunday, June 11th. The venue is the St. Charles Parish Center in North Bend. For more information e-mail mehaffey@dtnsped.net (E-mail)

**

THE SOCIAL SCENE: MARYLAND IN JULY

And the BRATS Hamfest and Computer Fest will take place July 25th at the Timonium Fairgrounds in Timonium, Maryland. This is one of the biggies that features more than 500 outdoor flea market spaces, hundreds of indoor vendors, free ham radio exams and much more. There is lots of information on this one on-line. You will find it in cyberspace at www.bratsatv.org (Press release)

**

HAM RADIO AND THE 2004 OLYMPICS: THE ATHENS 2004 AWARD

Athens 2004 Olympic Games Awards will available for all radio amateurs and short-wave listeners who make or log a requisite number of contacts with stations in Greece. This, during the period of the 15th of May until the 30th of September.

Special prefixes J4, SX and SY count 10 points each, normal SV stations count 5 points each and the Radio Amateur Association of Greece's HQ station SZ1SV counts 50 points. A total of 250 points is required for the Bronze Award, 350 for the Silver and 500 points for the Gold Award.

The address for applications is RAAG Award Manager, PO Box 3564, 102 10 Athens, Greece, or see the RAAG web site: www.araag.org/award2004.html (RSGB)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**
AN ARNEWSLINE FOLLOW-UP: MILITARY APPRECIATION DAY

A follow-up to a story we ran several weeks ago. Thanks to the efforts of several amateur radio operators in Ft. Wayne, Indiana a message of hope and appreciation was sent via the airwaves to our military personnel around the world. Newsline's Jack Parker W8ISH has the details:

---

It's official. By proclamation, May 29th, is officially Amateur Radio Military Appreciation Day in Fort Wayne, Indiana. The event was organized to honor and show appreciation to those that serve and have served in the military and related auxiliary groups. Planning for the event started last spring and quickly grew into a nationwide effort as organizer Emery McClendon KB9IBW spread the word to amateurs and MARS operators in the US and around the world.

The key to success centered on what Amateur Radio could do to let our Military members know that people supported them. Unlike written letters, amateur radio allowed Americans, in their own voice and words, tell the troops how much they care.

To get lots of public input, event organizers searched for a special event location. The Fort Wayne Wizards baseball team got into the game by offering up a spot at their stadium and a home game crowd. The effort grew momentum when radio volunteers from three Allen county amateur radio groups joined the ranks to spread the good word.

The amateurs ran three Echolink stations, IRLP, and two HF stations along with PSK31. The event scored local media coverage from newspapers, radio and network TV stations. Indiana Governor Joe Kernan, a former Vietnam POW and Indiana's senior Senator Dick Lugar both sent proclamations. They were just two of several proclamations read in a special ceremony before the first pitch of the baseball game. Many of the 65-hundred fans on hand, took advantage of the amateur radio connection to express their support to the military stationed around the world.

Reporting for Amateur Radio Newsline, this is Jack Parker W8ISH

--

The Fort Wayne hams say their mission was a success. They now plan to make Amateur Radio Military Appreciation Day an annual event. (ARNewsline(tm), KB9IBW)

**

HAM RADIO ON THE INTERNET: THE AOL RADIO COMMUNICATIONS FORUM

If you use America Online to get your e-mail and have never explored the Radio Communications forum pages, then you are missing half the fun. Almost since the day AoL took to Internet, the Radio Communications Forum has been a part of the service, and its not just limited to ham radio operators either. No matter what you radio hobby interest, there is probably a board for you. C-B. Scanners. You name it. There's a place for you.

So the next time you sign on and hear the famous words -- "you've got mail" -- type in the keywords radio communications and join the other radio hobbyists around the world who make this area of AoL their cyberspace home." (ARNewsline(tm))

**

HAM RADIO IN SPACE: AN ORBITAL FIELD DAY

Ham radio space travelers Mike Fincke, KE5AIT, and Gennady Padalka, RN3DT, may participate in Field Day from the International Space Station if time permits. ISS Ham Radio Project Engineer Ken Ransom, N5VHO, sent Field Day operating instructions and pass times to the ISS support team at Johnson Space Center. If they were on, Fincke should have been operating as NA1SS. Padalka would likely have signed RS0ISS. Both stations would be classified as 1 Alpha operations. (ARISS)

**

HAM RADIO IN SPACE: ITS A GIRL

And less we forget, a word of congratulations to Astronaut Mike Fincke and his wife Renita on the birth of their second child. Tarali Fincke was born on Friday June 18th with KE5AIT himself making the announcement from the orbiting I-S-S. (N1ORC)

**

THE EDUCATION FILE: THE 2004 TAPR - ARRL DCC

On the educational agenda, the 2004 TAPR and ARRL Digital Communications Conference will be held September 10th to the 12. The venue is the Airport Holiday Inn in Des Moines, Iowa and the planners say that are now accepting papers for the conference proceedings. You do not have to be present at the conference to have your paper included in the proceedings.

Submissions are due before August 10th. Send them to Maty Weinberg at ARRL Headquarters, 225 Main Street, Newington, Connercticut. The zipcode is 06111 and you will find more conference information on the web at www.tapr.org/dcc (TAPR)

**

WORLDBEAT - INDIA: A NEW HAM RADIO INITIATIVE

In world news. India's national Amateur Radio society says that it plans to conduct various programs to promote Amateur Radio as part of a disaster mitigation program in many venues across that country. Many local radio amateurs and clubs across India plan to back this National Institute of Amateur Radio initiative and also take part in this program. (NIAR via Q-NEWS)

**

WORLDBEAT - SCOTLAND: RSGB DISTRICT NAME CHANGES

And some major changes to the two Radio Society of Great Britain Scottish Regions have been announced. Region 1, previously known as Scotland West and the Western Isles, becomes Scotland South and the Western Isles Region 2, previously known as Scotland East and the Highlands becomes Scotland North and the Northern Isles.

As a result of these changes, two new RSGB districts will be added to Region 1. These are District 15 to be called Lothians and District 16, the Borders. The Deputy Regional Manager for District 15 is Dave Stockton, GM4ZNX. (GB2RS)

**

DX

In D-X, word that IZ3EFL is currently active as S79DF from the Seychelles. Look for him during his evening hours on 20 meters SSB. He expects to remain there for quite some time so QSL as directed on the air. (GB2RS)

And PA5M is now in Sudan and will be active in his spare time as ST2DX. He will be there for about one month. QSL is via PA7FM. (GB2RS)

**

THAT FINAL ITEM: D-DAY AND HAM RADIO - NEW ORLEANS STYLE

And finally this week, the story of ham radio helping to celebrate a national holiday, southern style. It took place in New Orleans and Don Wilbanks, AE5DW, is there with the rest of the story:

--

The weekend of June 5th and 6th the Jefferson Amateur Radio Club, based in Metairie, Louisiana operated W5D, a special event station to commemorate the 60th anniversary of the D-Day invasion at the National D-Day Museum located in downtown New Orleans.

Event co-chairman Keith Barnes, W5KB reports that by all measures it was a rousing success. Just over 600 contacts were made and the station display was very well received by visitors and Veterans alike. The hams manning the booth didn't miss many opportunities to

talk up amateur radio.

The display, prominently located in the main entrance hall just past the front door, featured a large collection of World War II vintage military radio gear. Among the visitors to the station were former New Orleans Archbishop Philip Hannan, himself a World War II vet and member of the 82nd Airborne. The Archbishop actually jumped with the 82nd on D-Day.

Also stopping by was Louisiana governor Kathleen Babineaux Blanco. She even sat at the radio and made a contact.

Both Archbishop Hannan and Governor Blanco signed the commemorative poster along with World War II veteran radio operators and World War II veteran hams. The poster will be made into the commemorative certificate for those stations making contact with W5D.

For more information on the special event, along with pictures of the station and vintage radio display, take your web browser to the Jefferson Amateur Radio Club's website at www.w5gad.org. To find out more about the National D-Day Museum visit www.ddaymuseum.org.

>From New Orleans, I'm Don Wilbanks, AE5DW for the Amateur Radio Newsline.

A job well done by the Jefferson Amateur Radio Club in New Orleans. (AE5DW)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A final reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award closes at midnight Eastern time this Wednesday, June 30th. If you have not yet nominated a youngster this is your last chance to do so for this years judging.

This Amateur Radio Newsline Young Ham of the Year Award is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states and who has made a significant contribution to the community, the nation or ham radio though the United States

Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org. Again, the cutoff for nominations this year is midnight on June 30th.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

I'm setting up an Optimod am 9100 B.
I want to set it up to have a lot of punch (compression) and get the loudest possible audio out of it, while maintaining a clean sound. I have heard stations with them with aggressive processing that sound great and I want to mirror that sound.

Does anyone have experience setting one up. If so, what settings do you recommend.
Thanks!

AA is too far right for NPR.

Want to buy:

AM radio station "Dog". Need not be profitble. Need
not even be on the air. Any market considered.

Prefer stations with real estate and seller financing.

No "pure" daytimers. Must have at least 50 watts night
power. Prefer to stay away from directionals.

Top of the list: Class "C" (formerly Class IV) AM with
real estate and seller financing.

FCC license must be intact and if the tower and/or
studio site is leased, there must be no issues with
respect to taking over said lease.

Finder'fee paid! Finder's fee paid. What I am trying
to say is that a Finder's fee will be paid!

Finder's fee paid, you fruitloop. PAY attention!!!

Tel: (478)741-1710 in Macon, GA

If I may, forget about Steve's. They're ok for picks and patch cords,
but my experience is that the staff doesn't know anything about what
they sell. If you know exactly what you want and don't expect too much
service, maybe.
A friend of mine, who is TD in a local student radio told me that he
bought his broadcast console at Groupe Berger.
(http://groupeberger.com) They're a bit outside of the city, but he
only works with them now...
I had contacts a few times on the phone with them, and they seem to be
ok.
Otherwise, there's Omnison, APL...

I would be interested to hear from your friend's experience when he's
done...

Kurt

wouldnt we all

I
> have heard stations with them with aggressive processing that sound
> great and I want to mirror that sound.

see if your owner/GM will spring for a 9200

>
> Does anyone have experience setting one up. If so, what settings do
> you recommend.
> Thanks!
>

the limiting factor on loudness may well be your transmitter.

make sure the polarity is wired so that postitve produces positive
modulation.

if it is an older unit replacing the electrolytics may be the best idea.

monitor the modulation with an ocilloscope (forget the mod meter) set for no
flatlining at 100% negitive

gain reduction -10 to -15 dB

crank up multiband drive until you cant stand the sound then back it off.

if transmitter blows up: fix transmitter the readjust from "insane" to "less
insane"

No, seriously....AM plants, being that there are so many more variables (antenna Q, transmitter variability (iron? switchmod? Doherty?), there really isn't one setting that can be recommended.

What I can say is this....don't go adding a lot of high-end, in the hopes of brightening-up the sound. It'll turn to mush. Use a lot of gating. And the center for the midrange boost should be fairly high, as what you're looking for is the highest degree of amplitude control in the upper-midrange, so that the low end is less squashed and thus, removed of dynamic range.

It's not the FCC, but the Federal Trade Commission, which has jurisdiction. 15 USC
Sec. 52. http://www.ftc.gov/temp/chapter_2.htm#Sec.%2052

The entire section is http://www.ftc.gov/temp/chapter_2.htm, as you might expect.

Nonetheless, if claims made in radio advertising are deceptive or false, they are
illegal, so to that that degree the writer is correct..

Excuse me, Sid, but as you've asked in a newsgroup, it seems to me that there's nothing which prevents me from responding.

Further, troll or not, I think this guy has a respectable mission....the amount of quackery, deception and outright larceny which passes for legitimate advertising needs to be stopped, whether it's weight-loss pills, invention patent acquirers or FCC spectrum lottery shares (of course, where is the FTC with the new "Medicare discount" cards that are being advertised now?).

The only trouble with FTC regs is that a complaint, or several, need be launched before they'll take action. Not that I would expect otherwise, since a more agressive effort would be prohibitively expensive, probably treads on free-speech guarantees, and still wouldn't make much of a difference. It's still up to the consumer to be at least a little cautious before plunking down money for a dubiously useful product or service. But I applaud anyone who would make an effort to collect (and, I would assume, act on) these abuses so as to make fraudulent and deceptive advertisers more likely to see the scrutiny of the FTC.

Of course, everyone assumes its a music format? (it probably is, but I
feel the need to mention this point).

I'm definitely one for brickwall AND dynamics, and have found a great
setting for just the thing you're after. The key is with AGC and
multiband. If you can separately ride your primary attacks in
multiband at about 10 or so db, this will give you your brickwall, and
create nice dynamics in silent spots with a fairly slow release on the
AGC. This is great for voice too. Again, use a gate to keep everything
clean. Keep the limiter light too.
EQ and all other settings to your taste. :)

Let us know how it goes.

Richard

>if that makes sense, can anyone offer suggestions? i'm totally ignorant
>about this, and could really use some help.

My suggestion is that you call Harris-Allied or BSW and tell them what you want, because there are a lot of different devices out there. And what you want depends a lot on how you're going to feed it and whether you are using an existing automation system to generate the data or whether you just want to hack your own serial connection up from something else. And also you need to know how to deal with exceptions when the program is interrupted and you are going from another feed than is scheduled.

Another BIG question is whether you want scrolling or not, and that is a matter of pretty major debate these days. I'm in the no-scrolling camp, but your GM may be big on scrolling.

Source record: 4761

The Sunday, June 27, 2004, Washington Post http://www.washingtonpost.com/ carried a 1/4-th page story on IBOC. It is on page F7 of the business section, written by Rob Pegoraro. You'll have to register to read it online.

Pegoraro was lent a car by iBiquity with both AM and FM IBOC [Panasonic]. He drove it for three days, both in the extended Washington area listening to FM-IBOC and to Philadelphia to try the AM since there are no nearer AM-IBOC stations.

To make this very short, he reported "MP3" quality audio and coverage problems on both FM and AM.

Regarding FM-IBOC, "In general it functions only where analog broadcasts already work fine."

Regarding AM-IBOC: "But digital AM's reception was even shakier than digital FM's. Driving underneath a cluster of electrical wires or a sufficiently long overpass - or simply going through some intersections in the center of Philadelphia - routinely cut out the crisp stereo sound and dumped me back into scratchy old AM." [Note - he was listening to WPEN 950, which has the equivalent of over 200 kW toward central Phily.]

He also reported that WETA-FM's analog and digital were a few seconds out of sync, but that is certainly not inherent.

I imagine that iBiquity isn't too happy with the story.

Bob Carpenter

He keeps making a big deal of having a few hundred volts on his loop. I remember using an end-fired "long" wire antenna on 160 and 80 meters when I was 14 years old in the 1950s. The antenna was some 200 feet long. In clear weather, it usually had a fair amount of voltage on it. I put a VTVM on it and noted that the voltage would get to a few hundred volts at times, especially when a storm was a few miles away. During a storm, the voltage could get over 1000V, if I was foolish enough to measure it. I was!

I could easily get a sufficient voltage to jump a gap. Since my ham equipment was all vacuum tube, I didn't worry about the voltage. Besides, I would ground it out with an RF choke except when I wanted to measure the voltage.

When I was older, I was the CE of a 10 KW-DAD in WI and at night used its 2-tower phased array with 360 ground radials in a peat bog on 160 and 75/80 meters. That antenna easily connected to South America on 75 meters with my homebrew 4CX1000A final. I could measure a hefty voltage on that antenna too, so I always shunted it to ground with an RF choke, to keep me from being zapped when I moved around the spades in the doghouses.

Yes, there are a bunch of them available. I think they are not just passive antennae but have at least a head amplifier in them. Check your local truck stop. I know T/A truckstops usually carry a couple.

Why on God's earth would Franken interview another talk show host,
unless the shows were simulcast and Franken could get exposure on
Boortz's stations? Did Boortz do something of news value that almost
required an interview?

Of course "never again." What did Boortz expect? Probably the same
treatment a liberal would get on a conservative show. Two absolutely
immovable objects ranting at each other. Same ol, same ol.

RW,

In the past when former president Clinton was president.
NPR referred to him as President Clinton.

Now what does NPR do when referring to "President Bush"
they use negative omissions and detractive code words:
simply referring to the President as "Bush" or 'mister' "Bush"
and the "Bush" 'administration'.

NPR is the primary propaganda organ for the Liberal Media ELITE [.]

I say ***FUCK THEM** and the lame horse they rode in on. IBOC will not hold
a candle to XM or Siruis. I have listened to Siruis, I own several XM
receivers and they both sound better than the AM IBOC and equal to (and
better) than the FM version. Coverage on both systems beats the socks out of
the test stations running IBOC.

Lets see what people have to say at the next "CES" show in Las Vegas.

Franken caught Boortz in a lie about having offered Franken to guest-host
Boortz's show (back before AA existed), and saying that Franken had
refused because Boorts wouldn't allow him to control the phone callers.

Franken called Boortz on the lie while on the phone with him, playing the
tape of Boortz lying, then forcing Boortz to admit that he had lied. I
heard the segment. Boortz came off as a lying, blowhard putz.

Of COURSE Boortz said "never again" after that.

Well, okay, but I thought the purpose of newsgroups were, among other goals, to help each other out. But I now see that the protestor is looking at programming which, depending on the pitch, isn't covered by FTC mandates....given what passes for entertainment programming these days, listeners are on their own to determine the efficacy or prudence in adopting practices or strategies heard on air (a hint, though.....it's worth every penny paid).

> I imagine that iBiquity isn't too happy with the story.

Two things come to mind from this article....the idea that I'd have to accept (when stations go to non-compatible digital mode) a less-than-acceptable audio signal (as I just can't stand MP3 quality, even at higher codecs raths), just so the station can claim it's "High Definition" is unacceptable. When I travel, I expect that I should be able to listen for at least a half-hour from city's center to where I'm going, and this system pretty clearly won't measure up.

The second issue (although this goes away when stations go full-dgital) is why a station wouldn't do an analog delay to match the delay for the encode process on digital. Of course, this means station monitors couldn't be used by on-air talent....yet another obstacle to being able to monitor quality, particularly in combo operations.

I'm glad I did a lifetime subscription to Sirius. It looks more and more like I'll be listening to this more as the days of traditional broadcasting comes to an end.....

I think ALL of these antennas have what amounts to an LNB. Which is one of the reasons why they're so expensive (you don't think someone would discount them deeply, thus starting a price dive to more reasonable profit margins?). Also, since the coax feed that comes from my magnetic-mount is so small, I'd expect that the losses from a passive antenna, combined with feedline loss, would result in an unusable signal. Thus, after first pickup, there's a stage or two of amplification, along with a conversion to a more reasonable frequency for further manipulation by the satellite receiver proper.

This is no different than the way TV DTH receivers work, the only difference being that TV, which requires a better signal-to-noise ratio because of the wider bandwidth, also uses a directional antenna to improve the received signal.

# 1586. Question About WPAT AM/FM Paterson

Newsgroup: rec.radio.broadcasting
Date: 2004-06-29 03:02:55 UTC
From: Rich Gilstein <emailaddress@hasbeenblocked.000>
Message-ID: <cbqm4v$puh$1@xuxa.iecc.com>
Source record: 4773

In 1996 when WPAT-AM was sold to Heftel Broadcasting and WPAT-FM was sold to Spanish Broadcasting System and both companies moved their studios and offices to New York City and I assume their transmitters were also relocated either to the Empire State Building and/or to the World Trade Center. What became of the offices, studios and transmitter towers on Broad Street in Clifton?

Also is their anywhere on the Internet with either downloadable or streaming airchecks from WPAT?

Any info is greatly appreciated.

WPAT- AM still broadcasts from Clifton, although the studio location is
unknown to me.

WPAT-FM had its antenna on the WTC, and moved to the ESB after 9/11.

|
In the San Francisco Bay Area, KFOG(FM) is apparently implementing
a delay for its analog signal. You can tell by comparing what's
on KFOG to what's on its Los Altos repeater, KFFG. Both are
fairly easily received in much of the Peninsula and bayside
East Bay.

I don't know if KFOG's boosters are running IBOC, though.
Apparently, KFFG isn't.

The AM Tx is still across the Hudson from Midtown.

Four top-loaded towers in nearly a square ... 90.8 degrees included angle ... 90.2 degrees on the long side ... 89.1 degrees on the short side.

The WPAT-AM transmitter is still in Clifton. (skyscrapers are not a
suitable site for an AM transmitter, especially a multitower directional
array like WPAT's)

I thought the FM was already on the ESB before it was sold?

So I guess it's safe to assume that if the AM transmitter and towers are still located in Clifton then the building which originally housed WPAT's offices and studios is still standing as part of the transmitter site. I also assume that the current owners of WPAT-AM kept some of the studio equipment in Clifton in the event of an emergency such as a blackout in New York City they could switch over the broadcast to the backup in Clifton? (Am I wrong about this?).

AM 93 WPAT is now owned by Multicultural Broadcasting (also owner of AM 1430 WNSW, AM 1480 WZRC and AM 1380 WKDM). Studios & offices for that cluster are at #449 Broadway in Manhattan -- in the SoHo neighborhood (actually near the border between Tribeca district and Soho district).

Wanted to buy:

The "Radio Crazy" is baaaaaaakkkk! I am still looking
for a "Dog" AM for sale cheap.

I will pay a finder's fee to anyone leading me to an
AM station or stations that I actually buy.

I don't care is station is losing money or is "dark"
as long as the FCC license is intact and they are not
facing eviction of their tower site. I will accept
pending eviction of their studio site. Transmitter and
tower site MUST be secure. What I mean by secure is no
pending eviction or lease about to run out.

Ideal station will be seller financed with little or
no money down.

No "pure" daytimers. Station must be authorized to run
at least 50 watts at midnight local.

No directionals exceeding three (3) towers.

Any market considered.

DO NOT MENTION station call letters or city of license
in your first email or telephone call. This is for
your protection.

Tel: (478)741-1710 in Macon, GA. If I am online you
will be routed into my email. My telephone may block
callers that mask their caller ID. If you call and do
NOT leave a message, I will NOT return your call. Even
the "Radio Crazy" does not like to play games! LOL!

Very odd for WETA-FM to not match delay, since I'd guess they do very little combo operation. A lot of their schedule is from NPR (or originated for NPR). They used to have a first-rate chief engineer. He went to XM, IIRC. RDS went away when he did. I don't know anything about their current chief.

WSKQ of SBS was on the ESB; WPAT was on the WTC.

> What FCC "laws" would they be violating, please.

Well- for instance: The adverse health effects of secondhand
cigarette smoke have been well-documented. (Anyone who wishes take the
position that there is no statistical link between breathing 2nd hand
cigarette smoke and adverse health effects should take their data to
the American Lung Association and argue the point with them. Maybe the
ALA will consider ceasing their national ad campaign pointing out
those dangers)

Anyway- A national talk show host who continually tells his listeners
that "Secondhand smoke is not a health hazard!"- in my view and the
view of experts, is dispensing FALSE medical "information". Similarly,
if the same talk show host continually tells his listeners that
"Styrofoam is bio-degradable!"- he is dispensing false chemical
information regarding polystyrene foam.

It seems to me that there ought to reach a point where there is such
a preponderance of false medical and product claims- such an
OVERWHELMING APPEARANCE OF IMPROPRIETY- that we ought to start asking
the question, for instance: "Is this host being paid by A cigarette
company (companies) to promote their product by lying about its health
effects? Does anyone have the guts to say,"It appears the King Has No
Clothes!" You certainly won't find anyone in the talk show business
who will bring this matter to his listeners' attention.
Styrofoam has been under attack by the public (because it litters our
landscape and the polystyrene industry has done little to promote
recycling)- many have proposed legislation to limit its use or require
the industry to recyle all its product: Is this host being paid by the
styrofoam industry to lie about its "bio-degradability"- thus to
promote the throw-a-way styrofoam packaging industry by getting the
public (and possible legislation)off its back?!

How about "Dioxin is not a health hazard!" What industry is paying
this host to spread environmental lies in an effort to encourage the

public to sabotage health studies on dioxins, clean-up efforts, etc?

If this talk show host is not being paid directly- under the table payments for spreading these false claims- is he receiving advertising contracts from subsidiary companies- who "appreciate his efforts" on their behalf.

I am not going to name the talk show host that these specific statements involve. This isn't limited to one host! You are all free to hazard a guess. I will tell you that I have these and much more on audiotape. The FCC knows all about this but refuses to act. The head of the FCC investigation division, Norman Goldstein, told me on the phone: "It appears that the host in question may be violating the law, but we do not have the resources to investigate this matter!"

I will tell you that this FCC officer agreed that there is an appearance of impropriety- but when I asked his if "resources" meant the FUNDS to investigate or that his office just lacked the WILL to investigate- he told me that he "did not want to discuss this any further".

The fact is: when a talk show host lies- he or she is making an attempt to inflame passions. He or she is attempting to gather listeners by inflaming sensibilities. He or she knows that when a lie is told, his listeners tell their friends, "Did you hear what talk show host X said yesterday on his show? He said (blah, blah blah)" The friend replies, "Really, I can't believe anyone would say that! I'm going to start listening to his show and see if he really knows what he is talking about!"
Right there is the dirty little secret talk show mechanism. You gather more listeners and ad contracts - in other words you SELL your talk show through THE LIE. There is no difference between selling your talk show by lying- than an advertiser selling his manufactured product by lying about its attributes. The first is a violation of FCC law just as the second is a violation of FTC law.

Don't anyone tell us that there are not current and former employees who are witnesses to statements in the inner offices of talk show execs and hosts-showing this fraudulent INTENT to gain listenership- and that they would have someting to contribute to an FCC investigation into this matter.

The there is no difference between yelling "FIRE" in an auditorium when there is no such fire and broadcasting on a radio station: "Folks- from my studio I see there is a fire at the downtown auditorium!" (also when there is no such fire)

Also- there is no difference between falsely broadcasting the auditorium fire and knowingly broadcasting false medical "information" which also has the potential to maim and/or kill. Even if it can not be proven that the host's intent is to kill or maim-Certainly a talk show host's REFUSAL TO CORRECT his false medical information lends to

an appearance of impropriety (knowingly disregarding the health of his listeners- in the interest of promoting his radio show) This intent needs to be investigated. This is NOT a FREE SPEECH issue!

Documentation, please--and don't just copy from NewsMax.

The President is generally always referred to in the first reference as "President ---" and in the second reference as "Mr. ---." That's basic AP Stylebook.

I did a search on npr.org and found 3,518 pages that have on them "President Bush." Granted, some of them may refer to George H.W. Bush and are likely not transcripts of stories that are audio hyperlinked, but it seems to me that NPR is following basic stylebook on references to the President.

And at NPR, as at many other journalistic organizations, the President is always heard last in a story, no matter what party he belongs to. That's also pretty much Journalism 101.

> NPR is the primary propaganda organ for the Liberal Media ELITE [.]

Then why are the extreme left-wing nutsos at FAIR continually attacking NPR for right-wing bias? Why does Amy Goodman of Pacifica refer to NPR as part of "corporate media?" Why did I hear a bunch of hardcore lefties at a forum I once attended *boo* a mention of NPR?

As far as I'm concerned, if the extremist wackos on both sides hate NPR, they must be doing something right.

I think you're right, but I suspect the writer was saying that WPEN's main lobe is effectively 200kW. Sounds a bit high to me, though....this would mean, what, 16dB over isotropic? Nah, that's not right. Here's WPHT's coverage (http://www.radio-locator.com/cgi-bin/pat?call=WPHT&service=AM&status=L&hours=U) and here's WPEN's nighttime coverage (http://www.radio-locator.com/cgi-bin/pat?call=WPEN&service=AM&status=L&hours=N). WPEN's got a nice lobe over Philadelphia and points east, but it still doesn't match WPHT's 50kW-U coverage.

>studio equipment in Clifton in the event of an emergency such as a
>blackout in New York City they could switch over the broadcast to the
>backup in Clifton? (Am I wrong about this?).

I was a summer replacement engineer in 1964 (between my first and second
years in college). At the time, programming originated from the Clifton
site except for the morning show, which was done in Manhattan and
brought to Clifton via equalized phone line.

The programming came from Ampex 351 decks, operated by the talent. To
keep the IBEW union happy, the outputs of the tape decks were mixed to
mic level and this sum was then brought into one input of a Gates
console operated by the engineer, who also operated the switch that
keyed the talent on-air.

The AM transmitter operated from the Clifton site (as now), with the TX
(a huge, ancient Federal 5 KW rig that had a separate vault for the
power supply and modulation transformer) being in the same room as said
Gates console. There was a Gates backup AM TX as well.

The FM ordinarily ran from the Empire State Building, but there was an
FM backup transmitter in Clifton, with the antenna mounted on one of the
AM towers.

In 1964, WPAT's business offices were already in Manhattan.

As an amusing aside, one of the essential engineering tools was a broom
handle. Held by the engineer, who balanced it on the console meter
bridge he used it to push the button that switched the DA from day to
night pattern while he stood by the Federal and hit the breaker that
turned the plates on and off.

Processing of the AM was via an old GE RF-mode limiter -- the audio was modulated to RF, gain-controlled, and then demodulated. This prevented thumps, which were typical of the vacuum tube technology of the time. During that summer, the station added a vacuum tube Audimax I to the chain ahead of the limiter.

(Snip, snip, snip).

The FCC has no rules (the only "law" the FCC has is called "administrative law" unless I am sorely mistaken) against this. The FCC basically has rules about technical operation, and the programming "rules" concern indecency, station IDs, etc. There is just about nothing on content other than indecency. Other government agencies, ranging from local to Federal, have jurisdiction on the areas you are mentioning, but not the FCC.

And a lot of what you mention is what, in English, we call "opinion." If a talk host wants to state he or she does not believe in the "trumped up figures about second hand smoke" they are well within their constitutionally _protected_ rights to disagree. Many people disagree with creationism or evolutionism, despite either Biblical or scientific "proof" and such disagreement is protected.

I can go on the air and state my belief that the Earth is flat, and that it is only our societal perception that it is round that makes it so. It's, in this case, my opinion.

You are basically chasing windmills. And they are the windmills you constructed based on your belief system. Fortunately, we live in a free society, and we don't have to agree with you.

I computed the 200 kW based on the 50 kW RMS field.... clearly not
applicable to the 5 kW power level.

No, only music. And only a muffled dial-up quality stream, no
broadband stream.

Most Sirius talk channels are actually rebroadcasts of AM/FM/TV
channels tho. So just go to the actual channel website and see if you
can listen free. For syndicated shows, visit one of the AM/FM
affiliate websites that stream.

If you were to broadcast that the "earth is flat" and were so persuasive as to use the argument to sell products in an under-developed country- I'de say you were a crook- and ought to be prosecuted. Of course- it appears you will stand by your "argument" that the statement is your legal opinion. Give me a break. What I am saying has noting to do with the opinions of an idiot.

I highly doubt that "styrofoam is bio-degradable" passes a personal opinion. It may be the personal opinion of an idiot. However- the talk show host I am quoting appears not to be an idiot. In fact- millions of people who have heard him believe that he is not an idiot! His numerous lies concerning consumer products tend to indicate that something else is at work. That something else is the distinct possibility that he is lining his bank account by promoting consumer products by lying about them. I'm not sure why you would dismiss a pattern of intententional medical, chemical,consumer product.. LIES- as personal opinion. Most people who witness continuous lies- label the person a pathological liar or a liar who appears to have something to hide. I wonder if talk show hosts are just something special in your mind and simply just ought to be left alone and always given the benefit of the doubt.-i.e. EVERYTHING they say, is by definintion- an opinion! Give me a break!

"The FCC has no rules (the only "law" the FCC has is called "administrative

You are certainly wrong on that point. Falsification of the news by intent is illegal. It says so on the FCC website. It says that "when the FCC receives extrinsic information from witness(es) that INTENTIONAL falsification of news events or product promotion occurs for any reason (i.e. personal gain, subjective views, etc)- THE FCC WILL TAKE ACTION !"

I have highlighted the WILL TAKE ACTION- because that is in their literature.

I will go to their website and post it here in the next few days.

Just another troll with a bad memory. NPR, and many other news organisations, will use all three forms just to avoid being repetitive. Regardless of the person or party holding the office. Same goes for Representatives and Senators. Shheeessshhh!

Could we PLEASE refrain from keeping these useless, wasteful and off-topic threads (although this one is less so than most of the crap that's been droning on-and-on for the last two weeks) from bloating this newsgroup? I, and I'm sure quite a bunch more, would appreciate it! By now you should know who is and who is not worth engaging. Use that knowledge to do the best thing, which is to just ignore them. Or put them in your kill file. They can't talk to themselves (although there may be a few who don't quite meet that criteria, either)!

But the point he's making is that these hosts *may be* (and I stress that I'm only
repeating his allegation) on the payroll for the firms being represented positively
(or said firm's competitors unfavorably). And that's still covered under payola
prohibitions, which last I looked, is still on the books (even though Clear Channel
et.al. have figured out a way around that one).

One of the reasons why the live streams aren't duplicated is because, as you say, they're usually available on the show's or the service's website.

But I beg to differ on the music streams. They sound every bit as good as a reasonably-fast MP3 stream. Not that I think that's all that good, but if you're happy with MP3 or a 32kbps RealPlayer stream, it's okay. And beats shuffling CDs.

"Mr Fact" seems to have a problem understanding the difference between an opinion and a fact. Also seems he's never heard of the 1st amendment. Sounds like he thinks government should protect the stupid. Freedom comes with a price, and that includes being responsible for decisions we make, including decisions on what to believe.

We are not talking about an underdeveloped country. Please don't build a straw man here.

We are talking about regulation of what might be broadcast on the radio in the US. The FCC has no jurisdiction outside the US, and you specifically addressed violations of "FCC laws (sic)" in your post.

The fact remains that the FCC has no jurisdiction over any of this.

>From the FCC:
The FCC and Freedom of Speech. The First Amendment and federal law generally prohibit us from censoring broadcast material and from interfering with freedom of expression in broadcasting. Individual radio and TV stations are responsible for selecting everything they broadcast and for determining how they can best serve their communities. Stations are responsible for choosing their entertainment programming, as well as their programs concerning local issues, news, public affairs, religion, sports events, and other subjects. They also decide how their programs (including call-in shows) will be conducted and whether to edit or reschedule material for broadcasting. We do not substitute our judgment for that of the station, and we do not advise stations on artistic standards, format, grammar, or the quality of their programming. This also applies to a station's commercials, with the exception of commercials for political candidates during an election (which we discuss later in this manual).

As Bob mentioned, there is the possibility that someone is receiving, unknown to station management, compensation for expressing certain views. This is the crime of plugola, which has to do with violating sponsorship ID rules, not the content of the message.

However, a point of view, whatever it is, is allowed. If a "Flatworldite" wants to do a show, and someone puts he/she/it on, they can rant all they want. Their rant is protected.

If the position or a paid ad breaks a law, it is not the FCC's jurisdiction. Other entities are responsible.

>
>
> I highly doubt that "styrofoam is bio-degradable" passes a personal
> opinion. It may be the personal opinion of an idiot. However- the talk
> show host I am quoting appears not to be an idiot.

This statement is just stupid. If I had a dollar for everything stupid I have heard and read, I would have retired. There is no law against stupidity, or a substantial portion of the population would be in jail, be ex-convicts or stand awaiting trial, including myself.

> In fact- millions
> of people who have heard him believe that he is not an idiot!

So? Again, "stupid" is not a crime.

> His
> numerous lies concerning consumer products tend to indicate that
> something else is at work.

How do you know he is lying? He may just be ill-informed as well as stupid.

As far as I know, there is no styrofoam lobby trying to soborn talk hosts into lying about coffee cups.

> That something else is the distinct
> possibility that he is lining his bank account by promoting consumer
> products by lying about them.

If this is true, and the station does not know about the compensation, there is a violation of plugola rules. If the statements were purposely and maliciously made despite contrary knowledge of fact, then there is a truth in advertising related issue. The FCC does not deal with the latter.

>From the Commission:
False or Misleading Advertising. The Federal Trade Commission has primary responsibility for determining whether an advertisement is false or deceptive and for taking action against the sponsor. Also, the Food and Drug Administration has primary responsibility for the safety of food and drug products. You should contact these agencies regarding advertisements that you believe may be false or misleading.

> I'm not sure why you would dismiss a
> pattern of intententional medical, chemical,consumer product.. LIES-
> as personal opinion.

Because in the USA, there is a presumption of innocence. If there is illegal activity, then the appropriate authorities should intervene. Otherwise, listeners will discover the show is full of inacuracies, and not listen.

> Most people who witness continuous lies- label

>> indecency. Other government agencies, ranging from local to Federal, have
>> jurisdiction on the areas you are mentioning, but not the FCC."
>
> You are certainly wrong on that point. Falsification of the news by
> intent is illegal.

>From "The Public and Broadcasting"
Broadcast Journalism. Under the First Amendment and the Communications Act, the FCC cannot tell stations how to select material for news programs, and we cannot prohibit the broadcasting of an opinion on any subject. We also do not review anyone's qualifications to gather, edit, announce, or comment on the news; these decisions are the station's responsibility.

Criticism, Ridicule, and Humor Concerning Individuals, Groups, and Institutions. The First Amendment's guarantee of freedom of speech protects programming that stereotypes or otherwise offends people with regard to their religion, race, national background, gender, or other characteristics. It also protects broadcasts that criticize or ridicule established customs and institutions, including the government and its officials. If there is to be genuine free speech, people must be free to say things that the majority may abhor, not only things that the majority finds tolerable or congenial.

The FCC prohibits haoxes. It does not regulate news reliability.

> It says so on the FCC website. It says that "when
> the FCC receives extrinsic information from witness(es) that
> INTENTIONAL falsification of news events or product promotion occurs
> for any reason (i.e. personal gain, subjective views, etc)- THE FCC

It means "record" a tape. I suspect the origin is from the days before magnetic recording, when recordings were made mechanically on discs, literally "cut" into the disc by a stylus.

To this day many people refer to the tracks on a CD as "cuts." Old linguistic habits die hard.

1. To record a tape. Probably a follow-on to the notion of cutting an
acetate, where the disc would physically be cut.

2. To edit tape.

Perhaps also at least in part a reference to the days when one literally
cut (and spliced) tape as part of the recording/production process.

(To think we now have a generation of radio folks who have never had
to splice tape...)

It's involved with the editing process in addition to simply recording.
Here's a dictionary definition, listing several uses:
http://www.wordwebonline.com/en/CUTTING
noun:
1: The activity of selecting the scenes to be shown and putting them
together to create a film
- film editing

An example: In filming or taping, there's the "cutting room floor."

verb:
10: Cut and assemble the components of
"cut recording tape"
- edit , edit out

19: Make a recording of
"cut the songs"; "She cut all of her major titles again"

20: Record a performance on (a medium)
"cut a record"

False advertising by a mfgr is not FCC domain. Under-the table
payments from a mfgr to a talk show host (payola) IS their domain!

O.K. Mr. Apologist;

I'm sure you will correct me if wrong- if a MANUFACTURER
mis-represents its product through false broadcast advertising- the
FTC is supposed to investigate. If a RADIO D.J. takes money
under-the-table to promote a song (payola) by whatever means (playing
it all the time, etc.) this comes under the FCC. Likewise, if a RADIO
TALK SHOW HOST takes money under the table to falsely promote a song,
service or any product- this is also under FCC jurisdiction.

Here's the FCC's letter to me from Norman Goldstein; Complaints and
Investigation Branch; Enforcement Div; Mass Media bureau of the FCC:

"The Commission has stated on several occassions that deliberate
falsification or distortion of news or information is patenntly
inconsistent with the public interest. However, in light of the
sensitive First Amendment values that are involved, an inquiry will
not be made of a station unless we receive extrinsic evidence of
deliberate distortion or falsification--for example, statements from
insiders or those who have direct personal knowledge that facts were
deliberately falsified. In this way, the Commission does not become a
national arbiter of the "truth" of what is broadcast over the
airwaves, nor does it judge the wisdom or accuracy of what is
broadcast.

In the "absence of substantial extrinsic evidence or documents that
on their face reflect deliberate distortion" the Commission does not
deem it useful or appropriate to investigate charges of distortion or
the broadcast of false information."

Now what else can you make of that other than:

1. The affirmative is true, i.e. :In the PRESENCE of substantial
extrinsic information which reflects deliberate distortion- the
commission WILL make an inquiry!"

2. If the FCC becomes suspicious that broadcast laws are being
violated- here is a crime investigating agency that does not go out

and investigate their suspicions- rather, by their own admission- they sit in their offices by the phone- waiting for some "insider" to CONTACT THEM! Can you believe that "UNLESS WE RECEIVE STATEMENTS FROM INSIDERS- we will not take acton!"

Funny how playing a song over and over- inflames the public and FCC takes action on payola to D.J.s- but cntinually lying about products raises no red flags!

Well, good luck to you. I'm very interested in seeing what the FCC has to say, if anything, about lying.

But, if I understand your so-far-undocumented claim, if I go on the air and give a weather forecast wherein the National Weather Service says that the high temperature today will be 85 degrees and I intentionally say, read "lie" (just for the hell of it) that it's going to hit 90, I or the station (if a listener complains to the FCC or enough of them do--begging the question of how the heck they'd know I lied!) would be subject to action by the FCC.

I would have, in this instance intentionally falsified _news_--weather news. What if, when reading a news story that states that the governor will speak in the city park at 8:30 PM on a particular night, and just for the hell of it (intentionally) I tell the listeners that he's speaking at 9PM and a lot of folks, as a result, miss the speech. Those folks complain to the FCC that the station or yours truly gave out the wrong time for the speech. Liable to an FCC sanction? Give us a break.

By the way, there's a hell of a big difference between a _news event_ and the news--a difference that might make a difference in how you present your argument--you seem to use the terms as though their meanings are identical. They're not. Think about it.

Now, back in the old days, a station with a record for doing stuff like what's described above could result in--ah, the heck with the old days.

The whole subject is goofy, and I'm ashamed of myself for wasting so much of my time on it--and your time, too, for that matter.

With a little investigation- we can all make this determination.
Unfortunately we can not all takr the time to do the research into
what is safe and what kills. I recognize a liar when hear one!

Just read this novel called Radio Activity by Bill Fitzhugh and it reminds me of the cosmic consciousness of KPPC-FM Pasadena, California, the first FM Rock Underground Radio station in Southern California, broadcasting hippie rebop from November 1, 1967 until the entire airstaff was fired on October 24, 1971. peace, ted alvy

KPPC Web Page http://members.aol.com/tedalvy/mallard3.htm

A book that gives the reader a feel of Underground Radio when the disc jockey would select the music to play, Radio Activity is the new novel by Bill Fitzhugh, who worked at several FM rock radio stations in the 1970s and 1980s. Born and raised in Jackson, Mississippi, he prefers The Band, Little Feat, and Van Morrison to Led Zeppelin, Black Sabbath, and Iron Butterfly. Bill Fitzhugh lives in Los Angeles with his wife and his record collection.

Radio Activity by Bill Fitzhugh (William Morrow 2004): Rick Shannon is an unemployed FM rock DJ considering a change in career. But just as he begins selling off his record collection, a job ffer comes from a small station in Mississippi, where a DJ recently stopped showing up for work. After discovering an audiotape that might explain the fate of the missing DJ, Rick assumes another identity: Buddy Miles, PI.

...He pulled Robert Palmer's 1974 gem, Sneakin' Sally Through The Alley. He looked on the back and found the song that had come to mind. He thought for another moment, then pulled 10cc, The Original Soundtrack. It contained a song with the same title as the one on Palmer's album. Was it the same song? Rick had never thought about it until now. He looked at the writing credits. The first was by Palmer and the late Lowell George of Little Feat fame. The other was written by 10cc's Stewart and Gouldman. Different songs, but with the same potent one-word title: Blackmail...

Gosh, the FBI and the CIA must by in a bidding war for your services during
these trying times of security risks. You could tell them who is a terrorist
and who isn't.

Or, more simply, you engage in the same hyperbola you accuse others of.

The original payola convictions were on IRS tax fraud.

Payola refers to playing a song without management consent and knowledge.

> Likewise, if a RADIO
> TALK SHOW HOST takes money under the table to falsely promote a song,

That is plugola. If it can be proven, it is an FCC violation only if there
was personal gain in exchange for promoting something unknown to management.
If management does know, then it is, by definition, not plugola.

The FCC does not monitor programming. All complaints of a non-technical nature must be inititated by members of the public.

And, in case you did not notice when the sent you the "f--k off" letter, they would demand huge proof to enter into a character qualifications issue. False advertising is not even in their jurisdiction... and trying to prove the difference between "point of view" and "intentional lying" in news is next to impossible.

Example from outside the US: in 1967, Time reported on a coup attempt in Ecuador. The described violent street demonstrations, police and military brutality and such. I was part of a reporting team, and we reported minimal demonstrations, non-violent stand-offs with a few rocks thrown, and the use of a watter cannon to disperse. Perhaps the Time reporter form Iowa really thought that was violent; others, with more of a world view, thought it tame. Who lied? Who, simply, saw it from their own perspective?
>
> Funny how playing a song over and over- inflames the public and FCC

Payola is, in fact, a violation of sponsorship identification rules. Giving an opinion different from yours about Styrofoam is just that... opinion. Opinions are free in the USA.

Sir:
To put it mildly- you're full of crap. According to the Chemical
Marketing Reporter "Styrofoam is non-biodegradable PLASTIC." The
magazine is put out by EXPERTS in the plastic industy.

I've seen styrofoam cups burried for 15 years- and there still
intact! I'de be happy if you took me to court and sued me for
misinformation because I guarantee I would countersue for your
frivilous clam- and I would WIN!

Your statement on styrofoam forever puts you on the idiot list.
Better think before you speak next time.

Well let's see. Enough theorizing! Heres another actual case:
A county government jurisdiction proposed a law to ban the use of a consumer product. This proposed ban made sense because according to the product safety data sheet on the product- "continuous breathing of the fumes can cause permanent liver and reproductive cell damage."

The talk show host called the proposed government ban "stupid". He presented a false chemical analysis of the product which "PROOVED" that the product's fumes were NON-POISONOUS! It is quite obvious that by lying about the health risks-the host's intentions were to get the public to apply pressure in getting that ban lifted- because the ban had no health safety basis!

Well- let's see if that example gets any of your interest. Should we have this talk show host investigated for receiving money from the product's manufacturer- for promoting their product by lying about it. Or should we just sit by and twittle our thumbs and allow this kind of broadcast fraud to continue?

The NRA, an organization that has been in business for over 100 years,
is an established national media outlet which has up till now been
involved in television and magazines (it has more subscribers than,
for example, "Newsweek"). Now they've added issue-oriented radio.

That's different from Air America, whose programming seems to
be entirely devoted to a particular canndidate (George Bush).

The only thing in common is that they are both are engaging in
what is supposed to be the most protected class of free speech.

Wanted to buy. AM radio station. Can be losing money
or dark or both as long as FCC license is intact.

Prefer with some real estate and seller financing with
little or no money down.

I do NOT want "pure" daytimers. Station must be
authorized at least 50 watts power at mightnight local
time.

I prefer to avoid directionals but they will be
considered.

A finder's fee will be paid if I and/or "my people"
actually acquire the station.

Tel: (478)741-1710 in Macon, GA. This is the "Radio
Crazy".

Anyone who uses a talk show host as a reference of any sort of fact has more than just a few screws loose.

This has been posted in this and other newsgroups for more times than anyone can remember, but apparently you haven't bothered to read it even once: Talk show hosts are entertainers. They are NOT sources of fact and were never meant to be.

misterfact> I've seen styrofoam cups burried for 15 years- and there still

I think perhaps he was just hoping that you wouldn't come back here
for 15 years. But the point is, people are free to say pretty much
whatever they want, regardless of how true you happen to judge it to be.
In the USA, we have found that putting up with everyone's random crap
is the more effective approach to fostering the responsibility of people
to think for themselves, and for the promulgation of truth.

Have you noticed that people are not seeking your help in your crusade?
That even those who would seem to agree with your notions of censorship
will actually disagree with you on the matter of the facts?
Perhaps you should consider why might be, and also task yourself with
uncovering the truth about the symptoms and causes of psychiatric
disorders involving egomania, messiah complex, and paranoia.
Then get yourself some help and eventually feel better.

First of all, David, I thought this was a low blow. I know that you're generally supportive of the broadcast industry, but for Mr Fact to call you this is unwarranted, and he should retract it.

> > [I]if a RADIO TALK SHOW HOST takes money under the table
> > to falsely promote a song, service or any product- this is also
> > under FCC jurisdiction.

> That is plugola. If it can be proven, it is an FCC violation only if there
> was personal gain in exchange for promoting something unknown to management.
> If management does know, then it is, by definition, not plugola.

If management, through stupidity or just plain greed, in the case of an otherwise popular host, allows stupid stuff to be aired and doesn't question why the host is saying stupid things, and in the process turns a blind eye to the issues being promoted so as not to uncover plugola, shouldn't management still be held responsible for failure to exersize reasonable diligence?

I know I had a "public affairs" show killed that we ran on WTAE years ago. The agency who provided, for free, the half-hour program (which aired in the middle of the night on Sunday, in order to meet minimum public affairs hours in the days when such minimums were still in force) was something like the National Coal Producers' Association. Routinely this program would extol the virtues of burning "King Coal" (often slamming other energy sources), an advocacy which I felt was too one-sided, and obviously so considering the source of the program. After a few listens, the continuity/public affairs director agreed with me and pulled the show. What we got in its place, though, was even more boring. Well, at least no one was listening.

> > Here's the FCC's letter to me from Norman Goldstein; Complaints and

> > inconsistent with the public interest.

> This would fall under "fitness as a licencee" if the station is not being
> operated in the public interest.

It's worth noting, though, how often this particular reason has been used to refuse renewal of a licensee. I'd guess zero (Red Lion was fairness doctrine violations, as I recall, as was Media, PA...I've forgotten the calls for these....WGCL and WXUR? But the Fairness Doctrine is gutted, now...there isn't a station on-air who would be liable for it, as it's so easily sidestepped by calling it entertainment programming. Then there was WHDH....RKO...these were financial shenanigans, if I remember correctly. So not a one lost a license based on "fitness".)

> > In the "absence of substantial extrinsic evidence or documents that
> > on their face reflect deliberate distortion" the Commission does not
> > deem it useful or appropriate to investigate charges of distortion or
> > the broadcast of false information."

> > Now what else can you make of that other than:

> I make of it: the FCC just said to you, "kiss off."

On that, I have to agree with you completely. The FCC (when they're awake) has a lot more serious things on their plate than having to wade into a potentially never-ending legal proceding, filled with lots of opinion, he-said/she-said and other soft disagreements, that I'd prefer the money be spent on the issues which actually have some relationship with mass media policy. Don't forget...there are still a number of people who are fooled when a station does an April Fool hoax. Who's fault is it that people lack the necessary tools to make their own determination? One should never believe anything heard or seen unless it's verified from other, preferably non-media, sources. And if they're not doing their homework, then oh, well. But at the same time, one has to hope these people don't vote. It may be a privilege, but there are responsibilities that few people actually accept, and in that regard I can see where Mr Fact is coming from.

Speaking of stupidity, by the way....I think you said that you can't legislate against stupidity. Oh, but what a better world it would be if you could? Again, the FCC has abrogated that opportunity by eliminating news and public affairs minimums (yes, I'm aware of the irony that WTAE ran their PA stuff when no one was listening) but people would be much better informed if, on occasion, they stumbled on a real newscast once in a while!

I hardly think that a talk show host who continuously lies about facts- would qualify as an entertainer. A broadcast "fraud" would better apply.

I wasn't using the host as a reference. Since the airwaves are being used, I have a right to expect they are being used fairly. The host wasn't "entertaining". He was lying about a chemical analysis of the product which, if believed without obtaining the safety data sheet- (and I have no doubt that his analysis was believed by many listeners)- has no doubt caused some people to become sick at the very least.

The thing for YOU to decide is if yelling "fire" in a crowded theatre is an action that should be looked into by the police- i.e the sanity and the intent of the person who yelled it should be looked into-even if it should fortunately result in no casualties.
After you've made your mind up on that one-and you should come to the conclusion that it unlawful and should be investigated- then decide for yourself if yelling "fire" (or doing the same thing by broadcasting ANY false medical "information" on the air)- can have the same devestating effect on the health of others- and thus also be investigated.

While you're pondering that- I'll just build my case for an overwhelming appearance of impropriety- by posting more and more examples of radio talk show host fraud.

Certainly my intent is to discredit the whole lot of them. If they are merely "entertainers" as some of you think, instead of falsifying news events or lying about medical facts- they should all be relegated to playing a musical instrument and telling jokes on the air!

The Gonset converter worked fine: it was the car radio which was wholly unsuited for the task. But they are fine for BCB DXing if the IF is narrowed down, or as is, given a good antenna, for audiophile AM.

Best is an aircraft ADF set. New ones are several thousand dollars but old tube and non-TSOd early SS types may be had cheaply. I got a huge pile of tube and early solid state avionics-dynamotors, tuner assemblies, and all-from a FBO who was grateful I'd haul it off.

I wouldn't presume that. Most ATUs and phasors are designed for the carrier frequency. The fact that a transmitter may also transmit audio sidebands is a secondary issue. IBOC splatter was certainly not taken into consideration in the design of nearly, if not all, of the phasors in use today.

From: samdotbyrams@hotmail.com
Message-ID: <ccbsib$lsp$1@xuxa.iecc.com>
Source record: 4844

Firstly, I hate IBOC as it will likely destroy skywave listening at night, an 80-plus year heritage we have in the USA. Further, I don't like Ibiquity's technology. This isn't a scientific issue, but rather a personal one.

DRM is, in my opinion, the way to go, despite the fact the audio isn't High End, because it's a world standard that can effectively use different bandwidths as they are available.

I don't see why we can't have DRM on a portion of the AM band and also on frequencies at HF, VHF and UHF that aren't utilized now on a local basis. Clearly, the public interest demands that the number of channels available exceed the number the five or s1x largest broadcast companies can afford to buy up, because we need local radio.

The WHDH case stemmed from an improper contact between a representative of an applicant for a TV license in Boston and an FCC commissioner (chronicled in Sterling Quinlan's book "The Hundred Million Dollar Lunch"). In that case, the licensee (the Boston Herald-Traveler newspaper) had been granted the license, but at renewal time, by which time the ex-parte luncheon had come to light, lost their "expectation" of renewal and was treated equally with other applicants for the license. RKO-General lost their licenses (was permitted to sell them instead of having them yanked by the FCC) for the felony bribery conviction of their corporate parent, General Tire and Rubber Company (which certainly qualifies as a "fitness" issue).

IBOC is the system by which digital audio can be transmitted over a standard analog radio channel. At least in theory. In practice, it splatters over adjacent channels.

In a sense, that proved the futility of putting program quotas on stations.
I recall many times when I did ascertainment or tried to get community
programs on the air, I would be told to bug off because the real community
leaders did not have time to talk to so many stations about "nonesense" or
to do so many radio shows.

Fitness has been used a few times, ususally when a licencee has been convicted of a crime. The recent revocation of about 6 licences of a guy from Terre Haute comes to mind.

Thank you!

IBOC is the system of digital audio broadcasting on a standard analog audio channel. Needless to say, it doesn't fit. It's only going to get worse.

"Joy To The World" single version in stereo:

DRM will actually *reduce* the number of channels available. Unless someone can bankroll the instant wholesale replacement of analog equipment (both transmitters **and receivers**) with DRM digital. Because unlike IBOC, DRM cannot operate on the same frequency as the associated analog broadcast.

I don't see any indication on http://www.drm.org that DRM supports stereo. Not a big deal on AM but probably a dealbreaker for FM. DRM really was never intended for VHF/UHF use.

If there's spare spectrum at UHF for digital broadcasts, then Eureka 147 is the way to go. The standard was specifically chosen for VHF/UHF use and is (at least technically) proven in many countries.

(please do not take the above post as an endorsement of IBOC. IMHO it will deprive millions of Americans of their sole nighttime AM service, while providing an inferior digital service, justifiable for only political reasons. We should be joining the rest of the world in implementing Eureka at UHF.)

PHONY??? Give me a break! It's common info that he does ALL the guest
voices. Phil has even admitted this ON THE AIR many times.The "Callers" are
VERY real....frightening real, some are very stupid.
All the voices are done by mouth and the use of a telephone mouthpiece. No
synthesizer is used.
The TRUELY amazing part is the dumb-shits that fall for this act. Most of
them would rank as true "Winners/Dolts/Dimwits" or just plain stupid. Some
of the responses are just funny as shit.

The KTNQ phaser and ATUs were carefully, and at great cost, redesigned for
IBOC.

Your observation is correct for most stations, however.

And that was in the general area that rendered RKO lacking the character qualifications to hold a license. In other words, "fitness." Add the General Tire dealings in Libya and Argentina, and you got the required divestiture of the remaining RKO properties.

>a personal one.

This is the case for IBOC-AM. Skywave is pretty much what makes AM
useful and unique, and I think without it there is really no purpose to
the AM band any more. But we'll see.

For IBOC-FM, of course, there is no skywave issue but there may still
be adjacent channel interference issues.

> DRM is, in my opinion, the way to go, despite the fact the audio
>isn't High End, because it's a world standard that can effectively use

I agree, but it requires seperate channels. Likewise, I think the Eureka
stuff probably beats out FM-IBOC but we can't get the bandwidth for it.

> I don't see why we can't have DRM on a portion of the AM band and
>also on frequencies at HF, VHF and UHF that aren't utilized now on a

The reason is because the public interest is no longer considered by
the FCC. The whole notion of radio serving the public went out with
the Reagan administration. There is no more public service, no more
Fairness Doctrine, no more enforcement of technical standards let alone
programming standards.

This is unfortunately true, and it's also one of the more important sources
of lousy sound for AM broadcasters. Low group delay across the antenna system
really _is_ important for good clean analogue audio.

>IBOC splatter was certainly not taken into consideration in
>the design of nearly, if not all, of the phasors in use today.

IBOC now requires low group delay across an even wider frequency range. My
hope personally is that stations will be forced to upgrade their phasing
networks and antenna systems in order to implement IBOC-AM, which will then
fail, leaving them with wider band antenna systems that result in higher
analogue audio quality.

However IIRC there was never allegation that the management of RKO General had any participation in, or even knowledge of, the wrongdoing of the corporate parent, nor was that wrongdoing in any way related to broadcasting.

But as David Eduardo has pointed out, skywave is no longer a factor in calculating a station's reach. So under the circumstances, your suggestion is quite the case. The fact that skywave propagation also makes an adjacent station's local coverage unusable is a bigger concern. At that point, not only is the AM band of questionable value, it's actually a complete waste with IBOC.

That is correct, but back then, character qualifications extended throughout other branches of the same company, and IIRC that was why RKO-General was allowed to sell the licenses rather than have them yanked.

Okay, okay, so "fitness" relates to a number of qualities. I get you there. What I was differentiating, though, was how a licensee could be "unfit" simply by airing content not considered conventional or even valid....the other misfeasances, criminal and otherwise, can certainly make a licensee unfit, but there are bigger issues with those failures than simply giving a soapbox for goofs. Long ago (late 60s? Certainly early 70s) the FCC made it abundantly clear (in the course of a station sale and license transfer) that they would have no opinion on an expected format change with the news owners (I think the station was classical, and its loss was considered by its audience to be unacceptable).

Frankly, I still don't see what's so wrong with requiring a licensee to accomodate a community's needs (after all, aside from that little condition, the station is free to make as much money with the license as it can) but this clearly will never happen here so long as the First Amendment is considered to encompass in toto the operation of a broadcast outlet. It's free speech we're guaranteed, and until broadcasters give out airtime for free, that's not free speech.

WIFE-1310, Indianapolis, KBTR-710, Denver and KISN-910, Portland (Vancouver,
WA), OR. Plus KOIL-1290

He engaged in ex parte negotiations with a member of Congress. In simpler
terms, he gave a bribe. Unfit as a licensee, licenses revoked.

Had no idea it was a common fact.
I listened to Hendrie a total of 2 nights for about 15 minutes, and as
I've done studio work in radio, I'm sensitive to voicing and phrasing and
could tell right away what was up. Have a different perspective now
that you've (albeit hot-headedly) told me... Interesting...

As you can imagine from 30 minutes in the car, I thought I simply
"discovered it" and thought, "Just another jackass on the radio...";
OTOH, if that's his entire shtick, I can't be too far from right. Anyway,
try decaf next time.

I don't think people who are tricked into deceit are "stupid", anymore
than I fault a spouse who's other half runs around on them. Deceit IS the
entire point of the show--so how can you blame people for falling into it?

>First proove to us that you are an expert at analizing chemical data.<

Wrong. It's YOU making assertions that someone is lying. It's up to YOU to prove it. It's not up to me to prove anything.

>Second- you appear to be disputing the FACT that styrofoam is not bio-degradeable. This leads me to believe that you are unqualified to accept chemical facts when they stare you in the face.<

Wrong again. Show me where I disputed your so-called "fact" (which you have yet to prove).

>You also appear to be disputing the FACT that many dioxins are poisonous.<

Yet another assertion without proof.

>If you want the facts- it appears to me that the first order of business would be for you to hear the TAPES which document the lies.<

Wrong yet again. Tapes, by themselves, document only what someone said. They don't document lies OR facts. YOU say they're lies...so YOU have to prove it.

>Get a group together of 100 or more people-(hopefully a few with chemical and toxicological expertise)- interested in hearing the tapes and it will be worth my time toplay them for you- free of charge.<

Gee, that's a nice little evasion you've got going there. You'll only play the tapes for 100 people.

Newsline's Mark Abramowicz NT3V:

**********

It took nearly three months to accomplish the mission, but amateurs in Ce=
dar
Rapids - armed=20
with ample data and the muscle of the American Radio Relay League - convi=
nced
Alliant to=20
prematurely halt their B-P-L test.

Jim Spencer, W0SR, first discovered the interference on his HF radio righ=
t
after Alliant=20
launched its B-P-L testing March 30.

Spencer, who quickly mobilized other Cedar Rapids hams to form a technica=
l
committee,=20
says the interference was so severe that it wiped out his and others' abi=
lity
to use=20
their radios.

Spencer says the group worked with Alliant officials to try to resolve th=
e
interference=20
and conducted several test measurements with the utility's cooperation.

Spencer tells Amateur Radio Newsline the group appealed to Alliant to shu=
t down
the=20
system and stop the interference on several occasions. But it was clear t=
he
B-P-L=20
industry was telling Alliant's managers something else.

"There's a lot of regulatory uncertainty here," Spencer explains. "And th=
at
what the hams=20
were calling harmful interference - in my case S-9 signals, you know, eve=
ry
1-plus=20
kilohertz across the band, they were being told that wasn't really harmfu=
l.''

Spencer says communications between his technical group and Alliant offic=
ials
were=20
civil, but they accomplished little action. He says he and others filed
complaints=20
with the FCC.

"I think in 21 communications I received one simple response basically to=
ld me
to go=20
back to the power company - the operator of the system," Spencer says. "A=
nd, of
course,=20
I had done that all the time. So, we had been asking the utility company =
to
close it=20
down, we had been asking the FCC to help us and then the ARRL went and
escalated that."

Wade Walstrom, W0EJ, is the ARRL's Midwest Division Director. He says the
league's=20
FCC complaint finally got the utility's attention.

"The thrust of the complaint was that they were now aware that the system=
was
causing=20
interference and didn't shut the system off so now that makes it willful
interference,"=20
Walstrom said...

Alliant stopped the B-P-L pilot test on June 25 saying it had gathered th=
e
necessary=20
data to make a determination on whether a general rollout of B-P-L would =
be
worth=20
pursuing, according to Spencer. He says Alliant's project leader told him=
the
ARRL's=20
FCC complaint was just one factor in the company's decision.

"Obviously we're happy, but we didn't feel like we had won," Spencer said=
. "We
felt=20
like this was a technical problem and that we tried to communicate some o=
f the=20
technical parameters to them and that they'd made a good business decisio=
n."

Spencer says an Alliant representative told him the company has no plans =
to
pursue=20
B-P-L at this time.

"In order to distribute it out to a sparsely-populated rural area with al=
l the=20
equipment it would take, it's not clear that this thing makes economic se=
nse,"=20
Spencer says. "And that this really can meet the goals of the rural user =
which
is=20
one of the things that people touted."

The ARRL's Walstrom is cautiously optimistic Alliant's decision might hav=
e a
ripple=20
effect.

"We would hope that other utilities or other organizations that were look=
ing to

possibly use B-P-L as a source of revenue will look and see the decision =
that
Alliant=20
has made and re-think their own plans and hopefully decide that maybe the=
re are

other=20
ways to provide broadband internet connections to the population as a who=
le,"
Walstrom says.

Walstrom says the Cedar Rapids group led by Spencer has set a precedent.

"All the proof on how well it's going to work isn't there yet," Walstrom =
says.=20

"And the proof that we have established here in Cedar Rapids and is comin=
g out=20
from other parts of the country is that it's not an interference-free sys=
tem by

any means and in fact it causes a lot of interference and we've documente=
d that
here."

Spencer says his committee, consisting of a group of engineers - most of =
them=20
retired from Rockwell Collins - stuck strictly to technical evidence in
communications=20
with Alliant. But he says its clear B-P-L has taken on a very political =
tone.

"Obviously the problem has got a lot of political implications, but the t=
hing
that=20
hams can do is remain professional and keep it primarily on a technical l=
evel,"
Spencer says.

The ARRL's Walstrom says if he could stand before the FCC panel to make h=
is
case,=20
he would strongly urge the commissioners to postpone action on or even wa=
lk
away from B-P-L.

"I think they need to delay it until they're satisfied that they're able =
to
mitigate any=20
interference problems at all and by mitigate from an amateur radio standp=
oint
that really=20
means eliminate," Walstrom says.

Spencer adds, there are no hard feelings toward Alliant. Spencer says he =
and
members of=20
his technical group still have a good, working relationship with the util=
ity.

"We've had quite a bit of communication back and forth through this whole thing," Spencer=20
says. "I mean I've had many, many e-mails and some phone calls and I woul=d say
that it=20
was pretty positive and still is."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphi=a.

**********

In addition to operations in Cedar Rapids, Alliant also provides utility services to=20
customers in sections of Minnesota and Wisconsin, and a small strip of northwestern Illinois

(W0SR, ARRL)

**

HAM RADIO IN SPACE: ECHO IS UP AND RUNNING

The newest Amateur Radio satellite is now in orbit and doing fine. Chuck Green, N0ADI,=20
reported by phone from the Baikonur Cosmodrome that the launch of AMSAT E=cho
and the=20
other satellites occurred on time on June 29th at 0630 UTC. He watched t=he
rocket climb=20
out and said it appeared to be flying straight and true. A second phone c=all
from Chuck=20
18 minutes later confirmed that the launch carrying AMSAT OSCAR Echo was successful and=20
that all spacecraft had separated successfully.

Chuck was assisted in the final integration and checkout process at Baiko=nur by
the team=20
from SpaceQuest which included Dr. Dino Lorenzini KC4YMG, Mark Kanawati N=4TPY,
and Lyle=20
Johnson KK7P. The SpaceQuest team members are also AMSAT members and volunteers.

First contact with Echo was at 1452 UTC on June 29th. After collecting a=bit
of TLM the=20
435.150 MHz transmitter was turned off at 1500 UTC. The preliminary keps=were
observed=20
to be pretty close. The first look at Echo=E2=80=99s telemetry shows thin=

gs are
looking good. =20
The battery was fully charged and the panels were delivering about 950 ma=
,
which is fine. =20
The panels were supporting the transmitter power adequately at about 2.3W
output. The=20
bird appeared to be tumbling as expected. Internal temperatures are arou=
nd 10
degrees=20
Celsius which is also as expected.

On the second pass the loading of software began and good progress was ma=
de.

Telemetry continues to look very good. While fades clearly indicated Ech=
o
continues to=20
tumble (as expected), at 2.2 Watts output good bits were received without
difficulty. =20
Rather than turn the transmitter off at the end of that pass, based on a =
very
good=20
looking power system, the power was turned down to about 0.3 Watts.

The hour between passes was spent closely examining the captured telemetr=
y and
comparing=20
it to pre-launch testing, as well as tweaking the keps a bit.

During the second set of passes approximately twelve hours later, the com=
mand
team=20
finished loading the housekeeping software. The housekeeping task is up =
and
running=20
as of June 30th at 0525 UTC. With more data available on the power syste=
ms
performance=20
the transmitter has now been left at about 1.2W.

The morning passes on June 30th concentrated on gathering telemetry. The
evening passes=20
continued with checkout activities.

A telemetry decode program, TLMEcho, is available for those who would lik=
e to
view and=20
report data from Echo. It may be downloaded from AMSAT.ORG in the Echo p=
roject
area,=20
http://www.amsat.org/amsat-new/echo/

If you record telemetry please send the CSV files to ke4azn@amsat.org.

Please do not transmit to Echo until checkout and commissioning has been
completed and=20
the satellite is made available for general use. Unexpected uplinks may =
cause
delays=20
in verifying the proper operation of ECHO and delay the opening of the
transponders to=20
general use.

(AMSAT, WD0E)

Break 1

>From the United States of America, We are the Amateur Radio Newsline, hea=
rd on
bulletin=20
stations around the world including the N7SKO repeater serving Arizona,
California and Nevada.

**

WITH NEWSLINE: SEND US YOUR ID - PLEASE

Would you like to ID your own repeater or bulletin station here on Amateu=
r
Radio=20
Newsline? Well here is how you can do it. Record the following sentence=
and
include=20
the call sign and location you want to honor.=20

>From the United States of America, we are the Amateur Radio Newsline, hea=
rd on
bulletin=20
stations around the world including the xxx repeater serving yyy zzz. Th=
e xxx
is the=20
call sign. The yyy and zzz are the city and state. =20

Then, take the tape and mail it to Amateur Radio Newsline, Editorial Offi=
ce,
28197=20
Robin Avenue, Santa Clarita, California, 91350. As time permits, we will
select an=20
audio I-D and include it in the newscast. =20

All tapes submitted become the property of the Amateur Radio Newsline and
cannot be=20
returned. Again, the address to make yourself a part of this bulletin se=
rvice
is=20

Amateur Radio Newsline, Editorial Office, 28197 Robin Avenue, Santa Clari=
ta,
California, 91350.

**

RESCUE RADIO: VA HOSPITALS SAY YES TO HAM RADIO

Hospitals in Roanoke, Virginia, will soon be ham radio equipped. Mike Kn=
ight,
K4IJ,=20
reports through the Repeater Journal that a budget of twenty-five thousan=
d
dollars has=20
been approved for the installation of Amateur stations at between ten and
twelve primary=20
healthcare facilities in the Roanoke area. =20

Knight says that the system will include a dual band base radio, a mobile
radio, a power=20
supply, antennas and full lightning protection at each hospital. Also go=
ing
on-line will=20
be a pair of commercial grade FM voice repeaters with back-up generators,=
and a
dedicated=20
digital repeater. The voice systems will have IRLP and Echolink tie-ins =
to
communicate=20
outside the local area. =20

When completed, the Roanoke system will consist of five to six linked
repeaters. The=20
base stations will be connected to each hospitals emergency power system =
to
keep them on the air.

(Repeater Journal)

**

RADIO LAW: COURT SAYS NO TO EXPANDED MEDIA OWNERSHIP

A U.S. Court of Appeals in Philadelphia has thrown out most of the Federa=
l
Communications=20
Commission's new and controversial media ownership deregulation. Its Thu=
rsday,
June 24th=20
decision means that for the time being, ownership levels of broadcast
properties and=20
related media will remain at current levels.

Back on June 2nd of 2003, the FCC's Republican majority voted to dramatic=
ally
ease a=20
prohibition barring daily newspapers from buying broadcast stations in th=
eir
markets. =20
The agency lifted caps limiting how many radio and TV stations a broadcas=
ter
could own=20
in the same area.=20

But in its 2 to 1 decision the Philadelphia court said that while some
relaxation of the=20
ownership limits might be reasonable, the agency had failed to adequately
justify the=20
limits it had put in place. The court announced that its original stay on=
the
FCC's media=20
ownership deregulation would continue until the agency fixes the regulati=
ons to
the court's=20
liking.=20

(TV Week)

**

ENFORCEMENT: TOO MUCH MORSE CODE

The FCC is asking a Missouri ham why he is running a Morse code training
program smack in=20
the middle of the 40 meter band. The target of the inquiry is Paul D.
Westcott, KC0OAB of=20
Purdy who apparently has code practice on the air around the clock.

Its June 21st letter to Westcott notes that the agency had previously dis=
cussed
this matter=20
with KC0OAB and was given assurances that the transmissions he was making=
were
for Morse=20
Code practice. Since that time the agency has received another complaint=
which
alleges=20
that the purported 40 meter code practice transmissions are 24 hours a da=
y,
seven days per=20
week. The FCC says that due to the crowded nature of the 40 Meter Band, i=
t is
extremely=20
inconsiderate to take up spectrum in that area for transmissions 24 hours=
a
day. This,=20

even if it is purportedly for =E2=80=9Ccode practice=E2=80=9D purposes.

The agency has posed several questions to Westcott to explain his operati=
on and
was given=20
20 days from the date of the FCC letter to provide a very detailed respon=
se.

**

ENFORCEMENT: NO LICENSE - DON=E2=80=99T OPERATE

The town of Reseda, California, is only about 10 miles from the Newsline
studio. It=E2=80=99s=20
also the place where the FCC alleges that someone has been operating a ha=
m
radio transmitter=20
without the benefit of being a licensed ham.

In a letter to a resident identified as Joseph A. Mosbergen, the FCC says=
that
he or someone=20
in his residence has been operating radio-transmitting equipment on sever=
al Los
Angeles area=20
Two Meter Amateur Radio repeaters. The agency warns Mosbergen that this =
is a
violation of=20
it rules and will subject him or whoever is proven to be operating to pun=
itive
action. =20
This could include a fine or imprisonment, as well as seizure of any
non-certified radio=20
transmitting equipment. It also tells Mosbergern that this is the last w=
arning
that he=20
will receive.

**

HAM RADIO BUSINESS: HEIL TO MARKET CLEAR SPEECH SPEAKER

Turning to the ham radio business scene, word that the NCT Group has appo=
inted
Heil Sound=20
Limited as its prime worldwide manufacturer and distributor of the Clear =
Speech
Speaker=20
system. Under the terms of the deal, Heil Sound will distribute Clear Sp=
eech
speakers to=20
their present amateur radio dealers and commercial broadcast distributors=
.=20

Also, the=20
Clear Speech speaker will be improved and several new products will be br=
ought
to the market=20
using the NCT Group technologies. According to Heil Sound these new prod=
uct
models are in=20
development and will be available for market by the end of July. More is=
on
line at=20
www.heilsound.com

**

COMMUNICATIOS NEWS: DUAL-CORE PROCESSORS ON THE WAY

Tech News reports that Advanced Micro Devices plans to begin selling micr=
ochips
with=20
the equivalent of two microprocessors in one next year. The Sunnyvale,
California based=20
company said it plans to offer dual-core processors for data-serving busi=
ness
computers=20
in the middle of next year, and for high-end home computers in the second=
half
of next year.=20
=20
Dual-core technology combines the power of two processors in one package.=
This
permits=20
the creation of a more powerful computer and increased computation power =
when
multitasking.

Last month, Intel said it would bring dual-core chips to the marketplace =
in
2005. That=E2=80=99s=20
more than a year ahead of schedule.

**

HAM RADIO BUSINESS: CW IS GOING STRONG

If you think Morse code is on its way out, the ham radio business communi=
ty
probably=20
disagrees with you. At least that=E2=80=99s the impression one gets thum=
bing through
the articles=20
in the July issue of CQ Magazine.

Not only are the ads for Morse related products holding steady, but the n=
ew
products area=20
has some reviews of the latest CW related products. And not to be outdon=
e,
Dave Ingram,=20
K4TWJ, devotes his World of Ideas column to Morse Keys from around the wo=
rld.

If you are a Morse lover, this is the CQ edition for you. It=E2=80=99s o=
n your
newsstand now. =20
More information is on the web at www.cq-amateur-radio.com.

**

THE SOCIAL SCENE: COME TO THE TENNESSEE HAM BREAKFAST

On the ham radio social scene, the Middle Tennessee Ham Breakfast takes p=
lace
at the=20
famed Tennessean Truckstop on the second Saturday of every month. People=
begin
to=20
gather there at about 9 a.m. and it=E2=80=99s billed as a chance to meet =
the middle
Tennessee=20
hams you may have contacted on the air. =20

Interested in attending? For full information simply send a note to
kenbreed@surfmore.net=20
or call Ken, AI4DV at area code 931 =E2=80=93 424 =E2=80=93 9523 during n=
ormal business
hours. =20

(Do Not Read: Repeater Journal)

**

THE SOCIAL SCENE: ROANOKE VA. IN JULY

And still in the South, mark down July 31st to attend the annual Roanoke
Hamfest. =20
This event is sponsored by the Roanoke Valley Amateur Radio Club and will=
be
held at=20
William Byrd High School in Vinton, Virginia starting at 8 a.m. local tim=
e.=20
Full=20
information on this friendly event is on line at w4ca.host4www.com=20

**=20

BREAK 2

This is ham radio news for today=E2=80=99s radio amateur. From the Unite=
d States of
America,=20
We are the Amateur Radio Newsline with links to the world from our only
official=20
website at www.arnewsline.org and being relayed by the volunteer services=
of
the=20

**

COLOR TV IS CELEBRATING ITS 50TH ANNIVERSARY THIS YEAR

Now for a bit of a history lesson. Although color TV transmissions were =
in the

development stages many years earlier, the broadcast industry is celebrat=
ing
its=20
half century mark this year. This is because it was 50 years ago that co=
lor
broadcasts=20
were initially
made available to the public. =20

Now, National Public Radio has posted a story and some interesting histor=
ical
resources=20
at its website. It is very interesting reading. That URL is in this wee=
k=E2=80=99s
printed=20
Amateur Radio Newsline report. =20

(www.npr.org/features/feature.php?wfId=3D1789944 (CGC))

**

EMERGING TECHNOLOGY: NEW DVD PLAYER FILTERS OUT BAD WORDS

Wal-Mart is selling the world's first DVD player that can seamlessly skip=
over
violence,=20
swearing, nudity and other potentially offensive movie content. The $79 u=
nit
features=20
technology by ClearPlay and is manufactured by Thomson Inc. under its RCA
brand.=20
=20
The DVD player is the latest development in a legal battle between the Sa=
lt
Lake City-based=20
software company and Hollywood. Members of the Directors Guild of Americ=
a

filed suit=20
against ClearPlay in September 2002, when the filtering product was avail=
able
as a=20
computer program claiming it impinges on intellectual and creative rights=
.=20
Those legal=20
proceedings are still under way in Colorado's 10th District Court. Both s=
ides
currently=20
are waiting for a ruling on a summary judgment filed by ClearPlay.=20

**

WORLDBEAT - SLOVAKIA: FIRST CELLPHONE VIRUS ANNOUNCED

On the international scene word that a group of underground virus writers=
have
announced=20
what is believed to be the world's first worm that can spread on advanced
mobile phones. =20
According to news reports, the worm named Cabir, was sent to security sof=
tware
firms in=20
the United States and Russia by a member of 29a. =20

29a is described as a group of virus writers from the Czech Republic and
Slovakia who=20
pride themselves in creating proof of concept malicious viruses. Thankful=
ly,
Cabir has=20
been found to have no damaging code attached that might destroy files or
execute other=20
harmful operations.

**

WORLDBEAT =E2=80=93 UK: RSGB QSL BUREAU CHANGE

On a more positive note, word that Marc Litchman, G0TOC is the new RSGB Q=
SL
Bureau=20
Sub-Manager for the G7AAA through G7ZZZ series of callsigns. Litchman ca=
n be
reached at=20
26 Oak Tree Close, Loughton, Essex IG10 2RE, in the U-K. =20

**

WORLDBEAT =E2=80=93 NEW ZEALAND: ZL1AN HONORED FOR EDUCATIONAL WORK=20

And a word of congratulations to New Zealand=E2=80=99s Dr. Gary Bold, ZL1=
AN. Bold is

a physics=20
lecturer at the University of Auckland and he has been awarded the Prime
Ministers=20
Supreme Prize based in part on his 43 years of dedication to teaching. =20

Bold has taught every course in the physics department, all courses in
geophysics signal=20
processing and network theory. He has also devised and revised experimen=
ts and
designed=20
the curriculum for many second and third year physics courses. A dedicat=
ed C-W
enthusiast,=20
in his spare time he writes the NZART Break-In Magazine column "The Morse=
man."=20

The presentation was made at the recent 2004 Tertiary Teaching Excellence
Awards. =20
ZL1AN was one of 12 academics from nine institutions presented with award=
s,
each of which=20
brings with it a $30,000 prize.

**

DX

In D-X, word that several O-H prefix operators will be operational from A=
land
Island as=20
OH0I during the CQ Magazine and RTTY Journal RTTY DX Contest. This, from
September 25th=20
to the 26th. They will operate as a Multi class 2 entry using multiple b=
eams
and vertical arrays on the low bands. QSL via OH3BHL.

And keep an ear open in September for RA3AMG from Cyprus. He will also b=
e
active in the=20
same contest signing P3B. QSL via his home callsign.

Lastly, ST2DX will be active from the Sudan until the 10th of July. Look=
for
him mainly=20
on SSB, with some CW, on all bands between 30 and 6 meters. QSL this one=
as
directed on the air.

**

THAT FINAL ITEM =E2=80=93 HAMMIN=E2=80=99 OLDIES ON WBCQ

And finally this week=E2=80=A6 who says hams and short wave listeners are=
nothing but
a bunch of=20
stuffy old geezers?

The Peacock Project is a group of Internet broadcasters that have banded
together to=20
present a variety of music eras, styles and talk over WBCQ on Saturday ni=
ghts
at 8PM=20
Eastern time, which is Midnight Universal Time, Sunday. Named in tribute =
to one
of their=20
group, Rob Peacock, who suddenly passed away in January, the show feature=
s a
different=20
host each week with a program that is unique to his own musical preferenc=
e and
personal=20
presentation. =20

The first weekend of every month will feature Dave Kirby's look b=
ack at
Old Time=20
Radio and some non-English language versions of American songs. The seco=
nd
weekend is=20
The Voice of Savage Henry, a 1960's and 70's "Garage Band" rock show host=
ed by
Steve Evanchuck,=20
KG8KO. Tim Gaynor is heard directly from Australia on the 3rd week and t=
he 4th
week is S
teve Coletti, aka =E2=80=9CBig Steve Cole=E2=80=9D. Four times a year the=
re is a 5th
Saturday to the month=20
and on those weekends it is time for "Hollow-State Hound", a show schedul=
ed to
feature=20
big band music with Mike "The DX Hound".

The broadcasters got together in an odd way, and going on WBCQ's 7=
415
kHz frequency=20
is like going home to where it all started. A few years ago there was a =
group
of ham radio=20
operators who were also listeners to shortwave broadcasters and utility
stations. Under the=20
umbrella organization of the Association Of North American Radio Clubs,
(ANARC), they would=20
join into a ham traffic net every Sunday morning on 7240 kHz to compare t=

heir
station=20
loggings. While the net still has a lot of good memories for those who jo=
ined
in or only=20
listened in, the group eventually disbanded. The net then moved to an In=
ternet
Relay=20
Chat channel that was already in existence.
To a few die hard members like Dave Kirby, N1DK, the discontinuan=
ce of
the radio=20
net was only a minor setback. Dave began doing weekly reports by way of =
the
Cyber=20
Shortwave real audio file that was available for download by anyone. It w=
as at
the suggestion=20
of member Pete Costello that Dave began doing his presentations as a live
interactive program=20
by way of sending sound via live365.com and receiving typed comments back=
from
listeners via=20
the IRC chat channel.

As loggings and SWL news tapered off, Dave began doing more music=
and
off topic bantering. =20
This led the powers that be at the chat room to ask Dave to create his ow=
n chat
room for the show. =20
The kick in the butt turned out to be a blessing as now the door was open=
ed for
others who wanted=20
to do interactive radio using Dave's chat room

We hope that you will enjoy the diversity of programming that the=
se
enterprising hams and=20
SWLs have created. The Peacock Project begins July 3rd on WBCQ at 7415 k=
Hz and
your fellow=20
broadcasters, hams and SWLs at the Amateur Radio Newsline wish you the be=
st.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magaz=
ine,

>A person who comments on the news (wether a lawyer, garbage collector or talk show host) is not being an ENTERTAINER- he is being- guess what? RIGHT! A NEWS COMMENTATOR !<

You can keep saying that until you're blue in the face, but that doesn't make you correct...and it only shows your lack of understanding of the broadcast business.

But a person who chats about social and political issues is chatting... a
form of entertainment.
>
> A song and dance man performing on stage or on the radio is called an
> -guess what! RIGHT ! AN ENTERTAINER !

Rush Limbaugh, in the 1988 R&R Talk Radio Seminar in Washington, stated he
was first and foremost an entertainer. Talk shows are listened to for their
entertainment value. News shows are listened to for their informational
value.

Paraphrasing a Spanish saying, "you can't get pears from an elm tree."

A person commenting on the news is - guess what? RIGHT! He's NOT A
REPORTER! The commentary is an OPINION!

The play-by-play announcer provides tha facts of what happened in the game.
The color COMMENTATOR gives his opinion of the game and/or player.

Because I am in a typical area I will comment. The local AM stations spend virtually all their time on sports or if not inane political talk. The FM stations abound in country music and every variation of rock that can be found except for the NPR stations which are either classical music (not objectionable as far as I'm concerned) or jazz.

The intelligent talk comes from former class I-A clear channel stations via sky wave from other markets. I particularly like Milt Rosenberg on WGN in Chicago.

I've heard the tests of IBOC. I understand that the military will not relinquish the 1500 mHz spectrum area that other countries are using for Eureka, but there will be a lot of high UHF spectrum available with the DTV conversion. It's been said that the NAB has killed the idea of Eureka because it would give everyone an equal playing field whether you are a 250 watt peashooter or a 50kw blowtorch. I'm not exactly sure of the working of Eureka but possibly an antenna height difference could be built in to give the present higher power stations an advantage.

Just my humble opinion.

Charlie

Sorry, but there you're wrong (as the FCC has defined it, anyway.) Limbaugh et.al. are entertainers, as the programming they provide is entertainment programming which is not subject to the more demanding tests of a newscast. Further, even though they comment on current affairs (another facet of journalism) as entertainers they are still not held accountable for facts, differing opinions or, for that matter, pretty much anything else.

> A song and dance man performing on stage or on the radio is called an
> -guess what! RIGHT ! AN ENTERTAINER !

Right.....so now you can understand that your crusade is without merit. The FCC has bigger fish to fry. Try getting this kind of programming re-classified, and restore the Fairness Doctrine to its previous role in providing a broad sampling of opinion on the broadcast media. Then you might have a case.

Eureka 147 has a very good RF transmission system combined with an obsolete audio codec (MP2) that causes severe spectrum inefficiency (by a factor of at least 2x) compared to what could be achieved with a state of the art codec. OTOH, Eureka 147, modified with the AAC / AACPlus codec, would be a killer system.

Unfortunately those improved wider band antenna systems will only be passing analog audio that has
been hard band limited to frequencies below 5 kHz to be compatible with the IBOC data carriers.

It's arguable that the pits on a regular CD (not a CD-R) are "cut"
(althoug some say "burned") at mastering time. So the terminology is not
far-fetched at all when applied to mass-replicated CDs.

Tape is another matter.

# 1699. Press Release: Milestone Broadcast - Rock-it turns #1000

Newsgroup: rec.radio.broadcasting
Date: 2004-07-09 00:44:11 UTC
From: rockitradio@aol.com
Message-ID: <cckpor$kgf$1@xuxa.iecc.com>

==========

Press Release: Rock-it Radio makes historic 1000th broadcast

Rock-it Radio the popular internet radio station playing 1950's Rock and Roll, Rockabilly and Doo Wop this week has just completed their momentous 1000th broadcast. No other internet Radio Station has completed such a task and the station remains committed in keeping the music of the first decade of Rock and Roll, Doo Wop and Rockabilly alive. Over twenty five musical celebrities from Gary U.S. Bonds to Brenda Lee gives a heartfelt congratulations to Rock-it Radio in this special 3 1/2 hour broadcast that also features the DJ's that are all volunteers and music collector's themselves from around the globe.
Rock-it Radio is a free service and all that is required is the Real Player software in your computer to play the programs. Rock-it Radio also hosts an online listeners club of over 3700 listener's and it's main location is in Ventura, California and is run by Bennie Dingo a Ventura native.
Rock-it Radio's historic 1000th broadcast tells the interesting story of it's beginnings as a syndicated radio program to Radio Station IRRS in Milan, Italy in 1995 and WRMI in Miami, Florida to beginning broadcasting over the internet back in 1997. Rock-it Radio is listed as the first station to broadcast Rockabilly Music of bands today and yesterday over the internet.
If you wish to check out Rock-it Radio we invite you to check us out at:
http://www.rockitradio.net
And if you wish to tune into the historic broadcast of Rock-it Radio's show #1000 by going to the archived show page at:
http://www.palmsradio.com/rockittext.htm
and clicking to show #1000. The broadcast will remain online for the entire month of July.

# 1702. Announcing 'hifi-am', to discuss High Fidelity AM tuners and hobbyist transmitters...

Newsgroup: rec.radio.broadcasting
Date: 2004-07-09 00:44:41 UTC
From: Jon Noring <jon@noring.name>
Message-ID: <cckppp$kll$1@xuxa.iecc.com>
Source record: 4742

Hello,

I've created a discussion group (mailing list) to discuss high fidelity AM tuners and hobbyist transmitters. Appended below is the more detailed group description.

To subscribe to this group, either go to the group home page (at Yahoo) and subscribe there (you will need a YahooID):

http://groups.yahoo.com/group/hifi-am/

Or, if you don't have a YahooID, send a blank email to:

hifi-am-subscribe@yahoogroups.com

Looking forward to seeing you there!

Jon Noring

**********

Group Description for hifi-am:
==========

The purpose of hifi-am is to explore the possibilities of high fidelity AM tuners and hobbyist transmitters for medium-wave (or better known as the broadcast band, appr. 520 to 1720 khz.)

Although most commercial AM broadcasts are definitely not high fidelity (due to various factors including, in many countries, audio bandwidth restrictions), there are nevertheless a few commercial stations which broadcast with audio quality approaching high fidelity. For example, in Australia, because the number of stations is fewer and the country quite large, many stations broadcast with quite wide audio bandwidth, approaching 15 khz.

There is steady growth in interest (in the U.S.) for non-licensed hobbyist broadcasting in the BCB (per FCC "Part 15"), which is restricted to 100 milliwatts and a three meter antenna (among a few other minor restrictions). With a high efficiency antenna, it is possible for such neighborhood broadcasting to be heard about 1/2 to 1 mile from the transmitter. There are quite a few progressive and alternative stations broadcasting this way. For a wonderful example, see Radio KMTZ.

More importantly, it appears there is no specific restriction on audio bandwidth for Part 15 transmissions. Thus, if this is true, the

broadcasts can approach high fidelity (15 to 20 khz audio bandwidth.)

Although discussion can focus on the general topic, it is hoped this group will catalyze the development of hobbyist kits for high fidelity AM tuners (digital, solid state, and tube) and for high fidelity low-power (Part 15) AM transmitters. It should be fun to consider the many possibilities.

That was WEFM in Chicago, generally considered the world's first commercial FM station and a longtime home for classical music. Zenith Radio decided that they didn't need to run the station as a loss leader to promote sales of FM radios and sold it to General Cinema, who then announced that they were going to flip it to Top 40. Even though there were two other FM signals programming full-time classical music in Chicago at the time, because a "Citizen's Committee to Save WFMT" had forced the Tribune Co. to sell that classical station to WTTW, the public TV station in town, after 'FMT's founder had sold it to the Tribune, the same people decided to fight WEFM's format switch with a "Citizen's Committee to Save WEFM." They got a court injunction in spring 1972 that stopped the format change the night before it was going to happen--with an air staff hired, billboards out on the street, ads in the weekend papers and the record library all packed to be shipped to WNIB, the *other* classical music station in town.

Soon afterwards, the FCC then washed its hands of judgments on radio format changes. It still took General Cinema five years to flip the station, after making agreements to donate programming and materials to both WNIB and NPR station WBEZ. The flip to Top 40 finally occurred in early 1978. Like WDHF/WMET a few years earlier, the station got some teen audiences, but they were unable to take the mass audience away from WLS and the station flipped to the Schulke II MOR format at the end of 1980. In 1982, General Cinema sold WEFM to Greater Media, who flipped the format to country and the call letters to WUSN-"US99." It's still country and still US99 today, although Infinity has owned the station for the last decade.

WBEZ dropped its few hours of classical music programming after the death in the early 80s of Dick Noble, the former WEFM morning drive man who switched to 'BEZ as part of the format change agreement (and was moved out of morning drive to 9 a.m.-to-noon when NPR's "Morning

Edition" premiered in 1979). Noble's show was the main classical programming on the station, which was (and is) primarily talk and jazz. WNIB, the last ma-and-pa FM in Chicago, was sold to Bonneville in 2001 for a lot of money and is now the successful classic hits WDRV--"The Drive." WFMT, still owned by WTTW, is now Chicago's only commercial classical music station.

Analogue radio switch-off nears

A switch-off date for analogue radio will be decided later this year by Culture Secretary Tessa Jowell.

Ms Jowell said she would review digital radio take-up in a foreword to a report due to be published by the industry's Digital Radio Development Bureau.

She said she would be "considering how long it would be appropriate for sound digital broadcasting services to be provided in analogue form".

By the end of June, 600,000 digital radios had been sold in the UK.

The decision to switch off analogue radio will mean about 100 million radios will become obsolete.

I recently drove across Mexico from Monterrey to Mazatlan and south to Guadalajara and never lost satellite service. It was marginal sometimes. The signal strength meter sometimes showed only one bar where it usually shows three (max signal.)

It sure helped pass the time in the deserts.

How about a talk show host who reads a news story from a news
service posting and inserts his own LIES in the story- and passes it
off as having been read verbatum? HuM?

Who ever brought up the name "Limbaugh" in all this? Why would you
immediately mention Rush Limbaugh regarding this topic of falsifying
the news? Limbaugh is hardly an expert at labeling himself. Sorry-
when ANYONE professes to be reading facts (wether from a news service
or from a medical journal)- and inserts his own LIES and then tells us
"I'm reading this verbatum"- YOU may label that "entertainment" but I
think most of us label it something else.

p.s. Are you Rush Limbaugh posing as David Eduardo?

## 1709. Soccer radio broadcasting

Newsgroup: rec.radio.broadcasting

I will be doing radio play by play of two soccer games in ten days. I know a little about soccer. I do know the differences between a corner kick and a goal kick, indirect and direct free kicks, and a very basic knowledge of the rules. Is there someplace where I can get some idea about how to pull this off?

Jay Scott
Helena, Montana

Soccer for Dummies is actually pretty good, and great for someone with
little soccer knowledge.

Bookstore, or have Amazon overnight it.

How do you know that? The news services the media get are often not the same content as what you can get for free online. And a news commentator can, legitimately, insert comments as they read a story. An analogy would be a movie commentator who inserts comments between movie clips.

>> Rush Limbaugh, in the 1988 R&R Talk Radio Seminar in Washington, stated

I brought up Limbaugh because he made the statement I wanted to cite. If Mickey Mouse had made it, I would credit the rhodent instead. The point was to show that even the most listened to host is aware that talk shows based on commentary are entertainment.

> Limbaugh is hardly an expert at labeling himself.

And out of the millions who listen to him, you are the only one perceptive enough to spot a lie? Or maybe the other 19,999,999 people realize he is commenting, engaging in hyperbole, making fun of things, and generally trying to entertain.

> Sorry-

uh....no he's not. If he reads a news item, then comments on it, he is not
a reporter, but a commentator. Commenting on the news item he just read.
Now if someone does this, you've heard the news story and you've heard the
opinion. You can decide. Oh wait - you want to decide for everyone else
what they hear. Maybe you could try China. Or Cuba.

# 1713. For sale: Partial interest in Georgia AM station.

Newsgroup: rec.radio.broadcasting

For sale:

(The "Radio Crazy" is baaaaaakkkk!)

Partial interest in fulltime AM radio station in
Southern Georgia. City of about 16,000 population and
a nice one at that!

This is a joint venture. Active or inactive investors
with at least $10,000 each are welcome. No individual
can hold over 49 percent interest. This means me too!

There is an element of risk and you could lose all or
part of your investment. (Standard
disclaimer....."they" make me do it! LOL!)

References:

a-My parole officer. Mr. Larson E. Rapp. c/o Zing Zing
prison, Ossingstink, NY. Tel: 1-800-IMA-THUG.

b-Trade reference......Brazilian Bandit Airways,
Oshlosh, WI. Purchased a one-way ticket to Rio using
all small and unmarked bills. Do not worry, the trip
will not commence until we have your funds!

Tel: (478)741-1710 in Macon, GA. Do not block your
caller ID, it will not ring in that case!

Only those fully indentifying themselves will be given
callsign and city of license.

## 1715. It's (semi-) official

Newsgroup: rec.radio.broadcasting
Date: 2004-07-10 04:09:48 UTC
From: Bob Haberkost <cbclistener-really!-@canada.com>
Message-ID: <ccnq6c$arc$1@xuxa.iecc.com>
Source record: 4606
Cross-posted to: alt.radio.broadcasting,rec.radio.broadcasting

This is the first time I've seen this in print, although I've seen rumours (some of which I'd started myself) relating to Canada's adopting rules for satellite radio broadcasting (e.g. Sirius and XM).

>From the CBC website:

If licensed by the CRTC, the CBC-Standard-Sirius application will immediately offer Canadian subscribers across the country approximately 100 digital audio channels, including more than 60 music, information, sports and other channels from the three partners. A number of CBC/Radio-Canada stations will also be added to the Sirius lineup in the U.S., which already includes offerings from BBC World, National Public Radio and Public Radio International.

http://www.cbc.ca/story/arts/national/2004/07/08/Arts/satradio040708.html

With the use of the word "immediately", it appears that Sirius will be using the same birds for Canadian operation. Doesn't surprise me. But as I say, this is the first time I've seen it in print.

IBOC blows! It's NAB's answer to satellite radio. IT AINT GOING TO WORK. XM & Siruis are kicking your ass with local weather and traffic offerings. So called "FREE" radio is exactly what you get for your money.
For the narrowminded broadcasters I guess Satellite radio is a fad, yes sportsfans a "Fad"..just like satellite TV,just like cd's and DVD's.Just like microwave ovens.
CBS/Infinity/Viacom has it's head squarely up it's ass. At least Clearchannel has the smarts to get involved in satellite delivery, Mel Karmazin was a complete joke! turning his back on the newest form of broadcasting,AND forbidding streaming audio from ANY CBS stations.

I always thought "kicking ass" meant you were a leader in a market.
Since both XM and SIRIUS combined have fewer subscribers than most
major market stations have listeners I don't see how "kicking ass"
applies here. Especially since the 2.6 million total subscribers are
spread over more than 200 channels. That would leave 130,000 listeners
per channel if all had equal audiences. The traffic and weather
channels would further reduce the number of listeners because they're
specific to fewer than 25 markets. I believe there's only one market
in all of New England (Boston) that's covered by their traffic
services. The rest of us have no option other than terrestrial radio.

I also doubt a full-time traffic and weather station would be
economically viable even in New York or Los Angeles.

>CBS/Infinity/Viacom has it's head squarely up it's ass. At least
>Clearchannel has the smarts to get involved in satellite delivery, Mel
>Karmazin was a complete joke! turning his back on the newest form of
>broadcasting,AND forbidding streaming audio from ANY CBS stations.

Clear Channel has significantly reduced its interest in XM and
Infinity is doing very well without the tiny, unsalable streaming
audience. Local advertisers don't care about coverage in Bombay and
the same products have different names in different countries. It also
makes an advertiser's desire to black out certain markets where
advertised sales are not happening impossible unless the station uses
a commerial insertion service to avoid streaming spots where agencies
haven't paid the talent for use in outside markets or for streaming in
their home market.

I'm sure Mel Karmazin is sobbing uncontrollably knowing you don't
approve of his business strategies. I'm also sure his and Viacom's
bank accounts will show he's been pretty effective.

I think you just like satellite radio and are giving it much more
influence than it really has. Reports of radio's death and the
influence of satellite radio are greatly exaggerated, at least at this
point in time.

I have both XM and SIRIUS. 4 subscriptions total. I live in New
England and have serious (no pun) problems with dropouts because many
roads are covered by overhanging trees and there are no repeaters in

the area. I also lose GPS signals. The other night I was driving in the country in a torrential downpour. I lost all satellite signals. Wet leaves are even worse. The radio goes dead silent every 30 seconds or so, depending on the foliage.

Rich

contact the coach(s) of the teams you will be doing. ask them who the team
boosters are. like any other sport the boosters can be almost fanatical
about the game and will be willing to talk about it as long as your phone
batteries hold out :). they may even supply a "color" person and/or a
"stat" person to help out.

Actrually, the AM IBOC sounds far better than analog IBOC, even the kind of analog you could get on an older receiver and pre-NRSC. FM IBOC is a degree better than analog FM. The real issue is with occupied bandwidth, not the quality of the audio.

> It's NAB's answer to satellite radio. IT AINT GOING TO WORK. XM
> & Siruis are kicking your ass with local weather and traffic offerings.

Not really. Arbitron measures Sirius and XM in local markets if it is mentioned. In LA, it shows up in less than a dozen diaries out of 7,000.

As Rich says, there are 2.300,000 subscribers. Given what we know about radio usage, less than 10% are going to be listening at any one time, and that divided among over 100 channels. That means, maybe 200,000 AQH listeners, or 2,000 per channel at any one time. The #5 station in Traverse City, Michigan has more listeners.

> So
> called "FREE" radio is exactly what you get for your money.

Which, is, in fact, its biggest advantage. Couple that with the existence of about 700,000,000 "free" radios in the US vs. 2 million for XM and you get an idea.

> For the narrowminded broadcasters I guess Satellite radio is a fad, yes
> sportsfans a "Fad"..just like satellite TV,just like cd's and DVD's.Just
> like microwave ovens.

It is not a fad. It is a niche. A certain percentage will sign up, and it will be profitable and successful.

> CBS/Infinity/Viacom has it's head squarely up it's ass.

Rich answered this. They are ignoring streaming and satellite as one is not profitable and the other is too niche.

> At least
> Clearchannel has the smarts to get involved in satellite delivery, Mel
> Karmazin was a complete joke!

CLear Channel has, now, less than 2% of XM. And has stopped providing programming.

> turning his back on the newest form of
> broadcasting,AND forbidding streaming audio from ANY CBS stations.

It does not make money, and does not create local market listening.

>quality of the audio.

I'm afraid I have to disagree. The most charitable spin I can put on
AM IBOC is that it sounds bad in a different way than analog AM sounds
bad, and to my ears, the analog is preferable. The damage IBOC does
to the analog signal is serious and quite noticeable on anything but
the very worst-quality receivers, the interference products have the
potential to do great damage to other stations, and IMHO it's a step
backward for the sake of selling equipment.

As for FM IBOC, yes, the digital signal does sound better than a badly
processed analog signal. It is a shade worse than a
properly-processed analog signal. I produce a weekly program for a
public radio station that is delivered as a 320kbps .mp3 file. That's
lower quality than analog or "CD quality," and FM IBOC is worse yet.
I will concede that to the typical non-audiophile listener, the
difference is not noticeable without a direct A-B comparison.

However, there is an adjacent channel interference issue with FM as
well, so the question arises, why are we junking up the band and
reducing everyone's effective coverage area for something that is,
looked at in the most positive possible light, just "not worse" than
what we have? Just to be "digital?" Most listeners think they
already have digital radios, anyway. (They show digits for frequency,
don't they?)

I do not understand this at all, except that a few big corporations
with a lot of lobbying clout stand to profit from it, if it becomes
widely accepted.

# 1723. Talk show host LIE concerning asbestos

Newsgroup: rec.radio.broadcasting
Date: 2004-07-12 05:06:06 UTC
From: misterfact@yahoo.com
Message-ID: <cct67u$3jj$1@xuxa.iecc.com>
Source record: 4613

Another LIE from one of the fabricators in the radio talk show industry:

"There are two types of asbestos: one is potentially lethal and one is as harmless as a Cheez Doodle... The Cheez Doodle variety of asbestos is known as chrysotile. It accounts for 95% of the asbestos used in the United States. And it is utterly, totally harmless"

Fact: Experts disagree over how serious a health risk is posed by chrysotile asbestos found in buildings. But there is no debate over the fact that chrysotile asbestos- has killed thousands of asbestos workers by giving them lung cancer and pulmonary fibrosis (asbestosis). There is no word from the EPA about the possibile toxicity of Cheez Doodles.

Question: why would a national talk show host lie about chrysotile asbestos? Was (is) this host being paid by the asbestos industry for trying to encourage his listeners to pressure their representatives in Congress to lay off the asbestos industry with further regulation- through the use of THE LIE?!

There is a continuing appearance of impropriety- i.e FCC law-breaking by radio talk show host(s) who are promoting consumer products through the use of THE LIE !

There was one in LA about 9-10 years ago: KTRK-1650 or something like
that. (One of Saul Levine's experiments?) Didn't last particularly
long, probably because no-one listened to it all day, they just listened
for their particular area/trip and then tuned to another station
for music, news or whatever....

Why? for he same reason? lack of interest?

Quad didn't catch the publics fancy. now if they had marketed it as "home theater system super surround sound (HTSSSS tm)" and dropped the QS, the SQ, and the CD-4 labels... why we might still have walls full of 8 tracks <grin>

07-18-04

Palisades Park-Freddy Cannon
See You Later Alligator-Bill Haley & His Comets
Dear Lady Twist-Gary US Bonds
Suavacito-Malo
She Loves You (stereo German version)-Beatles
Cry Baby-Garnett Mimms & The Enchanters
Cara Lin-Strangeloves
We've Got Love-Bobby Rydell
Heatwave-Martha & The Vandellas
Buzzzz-Jimmy Gordon
Nobody But You-Dee Clark
There Goes My Heart Again-Fats Domino
I'll Be Forever Loving You-El Dorados
Shy Girl-Cascades
Beach Time-Roger Smith
Since I Lost My Baby-Temptations
Seasons In The Sun-Terry Jacks
I Met Him On A Sunday-Shirelles
(Come 'Round Here) I'm The One You Need-Smokey & The Miracles
Hey Baby-Bruce Channel
Twistin' White Silver Sands-Bill Black's Combo
Let Me In-Sensations
Lonely Street-Andy Williams
Philadelphia USA-Nu Tornados
I Wanna Testify-Parliaments
Sweet Thing-Spinners
Heart Full Of Soul-Yardbirds
Tramp-Otis Redding & Carla Thomas
Perfidia-Ventures
To Love Somebody-Bee Gees
Can't Say Goodbye-Fireflies
This Diamond Ring-Gary Lewis & The Playboys
Gary, Don't Sell My Diamond-Wendy Hill
Indian Lake-Cowsills
Paper Tiger-Sue Thompson
Don't Ask Me to Be Lonely-Dubs

| the very worst-quality receivers, the interference products have the
| potential to do great damage to other stations

Simple question:
If AM IBOC is such hot stuff, why is it restricted to daytime hours only?

I can now hear the damage it does to the analog signal on KCBS. The
effect varies from radio to radio, but on almost all of them, the
noise floor goes up when IBOC is on.

On a synchronous detector, it sounds worse...like a mosquito buzzing
in the background. That's true even in a regional park with no power
lines or people nearby. And, on my AM stereo radios with those detectors,
that's with the stereo decoder OFF.

What's next: analog radios with 2 kHz bandwidth so we don't hear the
buzzing noise placed there to serve receivers that don't exist?!?!?

| However, there is an adjacent channel interference issue with FM as
| well, so the question arises, why are we junking up the band and

Mark Roberts <markrobt@comcast.net> wrote:

>On a synchronous detector, it sounds worse...like a mosquito buzzing
>in the background.

That's because it's in quadrature, which is "invisible" (modulo
transmission artifacts and channel noise) to envelope detectors. Your
sync. detector is only detecting one sideband at a time, so the IBOC
carriers don't cancel out.

(This is why I no longer listen to WBZ much during the daytime.)

None of the engineers I've talked to like the AM system. Some of them
see it as having potential to bring back a long-lost audience, in
spite of its significant flaws. Most of them see it as a pointless
corporate mandate that will waste their engineering budgets, reduce
their coverage areas, and dirty up their audio chains.

People I talk to in *my* business (computing, not broadcasting) are of
the opinion that traditional, reserved-spectrum broadcasting will
cease to exist inside of three decades, for various reasons, social as
well as technological. (That's assuming it isn't already dead -- many
of the people I know, my age and younger, are simply no longer users
of radio at all. It doesn't connect with them in any meaningful way,
nor does it serve their needs.)

Apologies to both groups if I'm in the wrong NG's. I am looking for help in trying to receive my favorite radio station that is only 30 miles away on FM 102.3. About 6 months ago, another station started broadcasting on 102.1 in a major city about 100 miles away. All I receive now is a warbled distortion of the new station on my local station frequency.

I've tried different radio receivers in my car with no luck. Is there any kind of filter or other device to help receive my old favorite?

Wanted to buy: AM "Dog" radio station.

(The "Radio Crazy" is baaaaaakkkkk!!!)

I am looking to acquire a cheap "Dog" AM radio
station. Prefer with seller financing and with little
or no money down. I don't care if it losing money
and/or "dark" as long as the FCC license is intact.

Prefer with real estate.

I DO NOT want "pure" daytimers. Station should be
authorized at least 50 watts at midnight local.

Finder's fee should I actually buy the station or
enter into a TBA with or without an option to
purchase.

Tel: (478)741-1710 in Macon, GA.

Station may be anywhere in the 50 states or Puerto
Rico.

Not interested in the Virgin Islands. I am not
suicidal! (Angry glare!)

Because the group delay that is the result of the uneven ionosphere prevents it from being decoded properly when the signal is received on skip, and the amount of stuff coming over the horizon on skip prevents it from being properly received when it's being received on groundwave at night.

>I can now hear the damage it does to the analog signal on KCBS. The

I wouldn't be bothered by this so much if the digital system actually sounded good. But the audio quality of the digital carrier is actually a lot worse than good analogue AM. It's like listening to Cylon Warriors.

There are no ads on XM music channels, just like Sirius. Both have
ads on talk channels. XM has more music channels and less talk.
Hence, fewer ads than Sirius.

I STILL would like to know why we actually need IBOC.
On my car radio with AM stereo it sounded great.
Not to shabby either after the NRSC mask was mandated. But then who
really listens to AM for music?

Analog FM if processed reasonably is capable of holding its own
against the original product. I can see the advantage of IBOC
for FM, but not AM. I suspect the whole subject is just a scam
for someone to make money (hardware & licensing) and a way to
slip a *broadcast flag* on everything so it can't be copied.

You will have to buy an Fm tuner, but the type that has a selectable "IF bandwidth" (wide narrow, super narrow) such as the Kenwood KT 6040. I had the same problem, but getting the 6040 was the cure for me

Specifically, your "business" is computer systems support at
a techie university, so I am guessing that the people you're
referring to are students? (If that's not the kind of people
you're talking about, could you describe who you mean?)

Most of the people I know at MIT don't to any AM radio, but they
may listen to a few NPR shows. Entertainment is mostly not from
the radio: music is on portable media or file-sharing networks.
But MIT students (in my few decades of experience with them) are
particularly un-representative of popular culture or societal norms.
I think you would find that the people of the same age across the
river at BU to have somewhat different behaviours. When you say
that it "no longer" servers their needs, I think maybe you're just
suggesting that they now live on campus or in the tiny walking city
(with demographics unlike anywhere else in the country, anyway),
they don't like talk radio, don't drive cars, and are very busy studying.
I would not base a prediction of whether people will be interested
in broadcasting on the behaviour of MIT students, because they've
never been very interested in popular commercial broadcasting,
as it has never really served the needs of the uber-nerd subculture.

What shows do you listen to while driving in your car,
and what do you do for traffic reports, and how do you
get your local news and weather on video or while driving?

But I would be interested in hearing technical and societal arguments
about how traditional broadcasting won't be interesting or viable in
the near future, or even in 30 years. (2035 is a long ways off, and
I think there could be major technological changes by that time which
could affect how broadcasting works.)

Does it have to be in your car? The real solution for this is a directional
antenna combined with a good receiver. Directional antennas are not
practical in the car.

| On my car radio with AM stereo it sounded great.
| Not to shabby either after the NRSC mask was mandated. But then who
| really listens to AM for music?

In San Francisco, if you want to hear an MOR station, you either
have an NCE-FM that has some limited coverage, or you have an AM
station (KABL) that still broadcasts in stereo.

In other cases, some specialty formats, mostly of the ethnic
variety, are available only on AM -- an exactly reversal of the
situation vis-a-vis FM 40 to 50 years ago.

| I suspect the whole subject is just a scam
| for someone to make money (hardware & licensing) and a way to
| slip a *broadcast flag* on everything so it can't be copied.

Precisely! The control freakery being exerted by content providers
is just going to end up chasing people away from the media.

That's my take, too. I had no trouble getting an AM audio chain to sound pretty darn good, mono or stereo, a situation which, from the assessments here (as well as the samples provided by...was it Ron?) can't compare to what IBOC leaves you with.

The irony about your suggestion that IBOC is just a scam to get programming locked down is that who would want to save the garbage that IBOC creates?

I gotta tell you....had I not quit the business in the 80s, I'd probably do so now. There's just no future in it, considering the crackerjacks who are pushing this "innovation". IBOC is D-O-A.

Another cure is to change the I.F. filters in your radio to those of a narrower bandwidth. The stock filters are probably either 230 or 280Khz bandwidth. If you change them to 150kHz filters (CF of 10.7MHz), your adjacent channel selectivity will improve quite a bit. If you really want super selectivity, you can install 110kHz filters.....be advised, though, that the more selective filters have a higher insertion loss, and with the narrower bandwidth, both your distortion and your stereo separation will be degraded.

Pete

I think the ad issue is meaningless. Both services have no ads on their music channels. Period. To me, the real difference is between their respective mix of service offerings. Sirius has a much stronger news, public affairs, sports (*ALL* NFL, NHL, NBA games), international content (WRN with content from two dozen international broadcasters, as well as BBC News 24/7 and soon CBC Canada) and topical discussion line-up. If your interests skew this way, Sirius is the better choice for you. If you're looking for a greater emphasis on music, XM should get first consideration (although Sirius does fine there as well, as far as I'm concerned.)

For sale:

(The "Radio Crazy" is baaaaakkkkk!!) heheheh.

Partial ownership in fulltime 1 KW AM station in S. GA
nice city of about 16,000. About 4 acres of real
estate, the building and tower are all included.

Total asking price is $225,000.

This is a joint venture. Active or inactive investors
with at least $10,000 each are welcome. All investors
would be on the board with full voting rights if
desired. There is an element of risk and you could
lose all or part of your investment.

No individual can own over 49 percent. This includes
me!

Tel: (478)741-1710 in Macon, GA.

Its amazing the footprint for Sirius satellite radio. It covers all
the lower 48 US states, Mexico, a good chunk of the western Carribean,
almost all of Canada (except extreme North) and even a good portion of
Central America.

They have three satellites orbiting in a figure-8 pattern.

http://www.cbc.radio-canada.ca/htmen/pdf_rtf/satelliteradio.pdf

I wonder if they'll sell service in other countries as well?

Dave

According to my engineering friends at SIRIUS and the big satellite
display just off the lobby shows only two satellites in use at any one
time. One is rotated out to recharge.

So, effectively, both services have two operating satellites. In
heavily wooded areas of New England overhanging trees block the signal
from both services. I suspect the same is true in the Pacific
Northwest where you're often driving in tree-formed tunnels.

>through the use of THE LIE?!

It's a nice scenario but way off base. Most talk show hosts are neo-conseervatives who feel any government regulation is bad. One has even argued against the views of scientists concerning global warming.

One is science, the other is political opinion and ignorance. The problem is that the talk hosts have a bigger platform than the scientists.

As for your contention that they're violating FCC rules, please document which rules they're breaking. Unless you can prove they're taking money from corporations, there's no regulation governing inaccuracy by opinion.

Rich

>sync. detector is only detecting one sideband at a time, so the IBOC
>carriers don't cancel out.

You have this exactly wrong. Envelope detectors are not sensitive to the phase of the carrier, responding instead to the square root of the sum of the squares of the I and Q components of the modulation:

SQRT(I^2 + Q^2)

(The carrier must be present in order to properly bias the envelope detector, but, upon demodulation, the carrier simply appears as a DC term.)

A synchronous detector will detect either the I channel or the Q channel (or some linear sum of the two) depending on the phase of the regenerated carrier. It can be configured to reject the Q channel entirely by ensuring that the regenerated carrier is precisely in-phase with the original carrier.

To detect single sideband, you need two synchronous detectors whose carrier inputs are in quadrature and whose IF inputs are also in quadrature. A single synchronous detector will _not_ detect single-sideband.

See any textbook on modulation theory.

From: Paul Van House <pvanhouse_removeme_@houston.rr.com>
Message-ID: <cd7q14$8o3$1@xuxa.iecc.com>
Source record: 4649

This was sent to me by a former co-worker. I've been out of "the business" for a while so most of it applies to me.

You know you're an Aging Radio DJ when:

You were first hired by a GM who actually worked in radio, before becoming GM.

Radio stations were no place for kids.

You excitedly turn the radio up at the sound of "dead air" on the competitor's station.

Sales guys wore Old Spice to cover the smell of liquor.

Engineers could actually fix things without sending them back to the manufacturer.

You worked for only ONE station, and you could name the guy who owned it.

Radio stations used to have enough on-air talent to field a softball team every summer.

You know the difference between good reel-to-reel tape and cheap reel-to-reel tape.

Religious radio stations were locally owned, run by an old Protestant minister and his wife, never had more than 20 listeners at any given time, and still made money.

You have a white wax pencil, a razor blade, and a spool of 3M splicing tape in your desk drawer - - just in case.

You can post a record, run down the hall, go to the bathroom, and be back in 2:50 for the segue.

You knew exactly where to put the tone on the end of a carted song.

You only did "make-goods" if the client complained. Otherwise, who cares?

Somebody would say, "You have a face for radio", and it was still funny.

Sixty percent of your wardrobe has a station logo on it.

You always had a screwdriver in the studio so you could take a fouled-up cart apart at a moment's notice.

You would spend hours splicing and editing a parody tape until it was
"just right", but didn't give a damn how bad that commercial was you
recorded. Hey, I can only work with what they give me, right?

You still refer to CDs as "records".

You played practical jokes on the air without fear of lawsuits.

You answer your home phone with the station call letters.

You knew how to change the ribbon on the teletype machine, but you
hated to do it because "...that's the news guy's job."

You have several old air-check cassettes in a cardboard box in your
closet that you wouldn't dream of letting anyone hear anymore, but,
you'll never throw them out or tape over them. Never!

You can still see scars on your finger when you got cut using a razor
blade and cleaned out the cut with head-cleaning alcohol and an extra
long cotton swab on a wooden stick.

You still have dreams of a song running out and not being able to find
the control room door.

People who ride in your car exclaim, "Why is your radio so loud?"

You remember when promotion men bought to new LP's to the station,
among other things - and you played them the same day.

You have at least 19 pictures of you with famous people whom you
haven't seen since, and wouldn't know you today if you bit 'em on the
ass.

You wish you could have been on "Name That Tune" because you would have
won a million bucks.

You even REMEMBER "Name That Tune".

You can still hit the beginning of a song on an album with the stylus,
and
slip cue that sucker while potting it up so the cue burn isn't so bad.

You know what slip cueing a record is.

You can thread up a reel to reel in two seconds flat.

You're no longer stunned when you have to patiently explain that you
don't
have to record your voiceover on two tracks so it will be "stereo".

You remember when everybody turned on the radio, not the TV, to find out
WHERE THE TORNADO IS.

You can remember when smoking in the air studio "WAS MANDATORY".

>

I do not believe that this is correct. The modulation scheme of iBiquity's IBOC system is basically multiple carrier COFDM, and is quite similar to the modulation scheme used in Digital Radio Mondiale (DRM), which is known to be robust in the face of selective fading. It all depends on the symbol spacing used in the COFDM carriers. If the multipath period is shorter than the symbol spacing, then the various reflections will reinforce. Because there are multiple narrowband carriers in COFDM, the data rate on each carrier can be very low (allowing long symbol spacing), yet the presence of multiple carriers still allows the overall system to deliver a high data rate.

# 1763. Fs: Two Audio Consoles Air/Production

Very true. If Air America were set up to influence an election it
would a horrible waste of money with the limited coverage. Let's also
understand that all affiliates don't carry all shows, so that further
dilutes the political influence they might have.

I can not PROOVE that FCC crimes are happening. Just as with ANY crime (abduction, embezzlement, etc.) the overwhelming APPEARANCE of a crime is enough to initiate an INVESTIGATION by the proper agency. If the books show money missing from a business or government account- an investigation is started. If a talk show host continually lies about consumer products and at the same time- reaps in ad contracts for those products or a subsidiary product- an investigation should be made (interviewing insiders for instance) as to the INTENT of the DECEPTIONS.

Reuters
Clear Channel makes peace with antiwar billboards
Thursday July 15, 7:32 pm ET
By Gail Appleson

NEW YORK, July 15 (Reuters) - Clear Channel Communications (NYSE:CCU - News) made peace on Thursday with a public interest group that sued the media giant for breaking a contract over posting an antiwar billboard in Times Square during the Republican National Convention.

Clear Channel settled the suit by agreeing to give Project Billboard two different prime Times Square locations instead of just one. In return, the group will drop its plan for a bomb graphic that Clear Channel found distasteful.

Project Billboard, which had a $368,000 contract for a billboard on the Marriott Marquis Hotel, sued Clear Channel's Spectacolor unit on Monday after it refused to post the antiwar message. Clear Channel said Marriott prohibits political advertising on its billboard.

Under the deal, Project Billboard can run its original text "Democracy is best taught by example, not by war," on both billboards but will not use a drawing of a bomb with lighted fuse decorated in Stars and Stripes.

Instead, one of the locations, a wrap-around billboard on the Conde Nast building on 42nd Street, will picture a stylized peace dove. The other location, a vertical billboard on the W Hotel at 47th Street, will display constantly updated figures representing "the total cost of Iraq War."

"These two new prominent locations will showcase our messages in the busiest intersection in America," said Deborah

Rappaport, a Project Billboard board member. "We are impressed with the options Spectacolor presented to us and appreciate their cooperation and flexibility."

During a court hearing on Wednesday, Clear Channel's lawyer said the company had concerns that the bomb image would offend New Yorkers who lived through the Sept. 11, 2001 attack on the World Trade Center.

The billboard with the dove will be displayed during August when the Republican National Convention meets in New York, and again from October through Nov. 2. The vertical billboard will be displayed for two days of the convention and during September and October.

"We are happy to help Project Billboard get their message to the more than 1.5 million people who pass through Times Square each day," said Paul Meyer, President and Chief Executive Officer of Clear Channel Outdoor.

Nearly every radio stock is off in that time period, most by a higher
percentage than Clear Channel.

Check them. Even Viacom is off more than CCU.

Actually, Rich, I'm glad you brought this up again, since I wanted to comment on your observations made a while ago. I finally had my Sirius radio (and the car it was in) far away from its local haunts (back-and-forth to work), as my son and I took a trip to the Downington/West Chester area to see his new choice of University (yeah, I know...too much information). What I found was, more or less, the same issues you have...on local roads, where tree coverage is thick and low, I'd get occasional drop-outs. It never was an issue on major thoroughfares, since brush and trees are cleared higher and further away from the road. And, since we'd been listening to the same station for over 250 miles from our origin, I'll take the occasional drop-out over having it gone entirely long before had it been conventional radio.

But on our way back, I was astounded to find that (as opposed to complete absence in the tunnels on the turnpike) I had coverage after travelling only half-way through the Squirrel Hill tunnels in Pittsburgh. Clearly Sirius must have a terrestrial repeater here, most likely on the downtown side of the tunnel, as I can't explain how this could be any other way, but I really hadn't expected that Sirius had gotten around to attending to Pittsburgh just yet. I know that this doesn't address the outlying areas such as where you are, but clearly the terrestrial links will be dealing quite adequately with this issue in metropolitan areas.

And thanks for explaining how Sirius' satellite use works. This also means that, were one of the birds to fail, they could probably continue operations relatively unaffected, although clearly more delicately balanced between operational use and keeping the birds in a position to do so.

OK. Listen to those "lies" and tell me which advertiser is running a schedule that might have resulted from the inaccurate opinions. Most major advertisers shy away from controversial talk. That's why you'll hear the Conservative Digest, Hooked on Phonics, Oreck Vacuum Cleaners and similar accounts. They're heavy network advertisers. I can't remember the last time I heard an oil company spot in a radio talk show.

There aren't even pharmacutical companies advertising the drugs Limbaugh uses. Not only is he defending their use, he's contributing significantly to their bottom line. Still, no ad budget for his show. That sounds pretty unappreciative on the part of the companies.

Rich

That is a fair point, assuming it is true. Checking...

Clear Channel: down 22%
Viacom: down 17%

I know this is difficult for republitards, so allow me to
explain.

That means Clear Channel is off more than Viacom.

That means that for every dollar Clear Channel has,
they lost 22 cents compared to 17 cents for Viacom.

Both are earning money, Viacom less per share, but it is
a larger company.

Other competitors of Clear Channel:
Citadel Broadcasting: down 33% (losing money, much smaller
company)
Cumulus Media: down 28% (earning money, much
smaller company)
Sinclair Broadcast: down 32% (earning money, much smaller)
Journal Communication: down 3% (earning money, much smaller)
Entercom: down 29% (earning money, much smaller)
Emmis: down 25% (no earnings, much smaller)
Hearst-Argyle: down 14% (earning money, much smaller)
Saga: down 10% (earning money, tiny company)

In conclusion, all radio appears to be down, but Clear Channel is down comparatively more because it has more assets, stations, and is a "diversified media company".

therefore the enire stock comparison is invalid as a measure of CCs radio division performance.

to equate the removal of one show from six stations as a financial disaster at least in this case would be insane.

>
> Clear Channel: down 22%
> Viacom: down 17%

VIA (Viacom A Shares) peaked at 46.98 in September of 2003, and are at 34.51 now. The current price is 27% below the 52 week peak. VIA.B (B shares) peaked at 46.95 and are at 34.75. If you average both classes on a shares outstanding weighted basis, you have 26% off.

CCU is 25% below the 52 week peak. In other words, CCU is off less than VIA, based on share price. But, of course, since VIA has three times the number of shares, the money loss is much more on VIA.

> I know this is difficult for republitards, so allow me to
> explain.

It has nothing to do with politics, but, rather, with a slow year for radio revenues. All ad industry issues are suffering, each depending on the sector. Ad agencies are also off.
>
> That means Clear Channel is off more than Viacom.

And Viacom is not a pure radio company. That is why I used the term "even" to include some entertainment stocks that had significant radio involved to show that radio was down all over, even effecting non-core radio issues. .

The average radio company is down about 25%. Some a little more, some a little less. This has been widely commented in investment discussions, ranging from Morningstar.com to broadcast publications like www.insideradio.con and The Radio Business Report.

> That means that for every dollar Clear Channel has,
> they lost 22 cents compared to 17 cents for Viacom.

But Viacom has lost $19 billion in stock value, while CCU has lost less than $7 billion.

> Both are earning money, Viacom less per share, but it is
> a larger company.

How much a company earns per share is irrelevant. That depends on the number of shares you divide net income by, and is only relevant to one company. The key number is the price to earnings ratio. Lower is better. It means every dollar invested earns more money.

There is no EPS standard or stock price standard. General Dynamics at $108 a share is not a better quality stock than General Electric at $34.

Clear Channel has 614 million shares, and the market cap is $21 billion, and its price to earnings ratio is 18.1
Viacom has 1.7 billion shares, and the market cap is $59 billion, and its P/E ratio is over 35.

Viacom is more overpriced, selling at a 35 to one ratio, vs. Clear's lower 18 to 1 ratio.

> Other competitors of Clear Channel:
> Citadel Broadcasting: down 33% (losing money, much smaller
> company)
> Cumulus Media: down 28% (earning money, much
> smaller company)
> Sinclair Broadcast: down 32% (earning money, much smaller)
> Journal Communication: down 3% (earning money, much smaller)

The stock only began trading 9 months ago. And it is off just about 11% from its peak, not 3%.

> Entercom: down 29% (earning money, much smaller)
> Emmis: down 25% (no earnings, much smaller)
> Hearst-Argyle: down 14% (earning money, much smaller)

No radio in Hearst, I believe. Only 27 TV stations.

> Saga: down 10% (earning money, tiny company)
>
> In conclusion, all radio appears to be down, but Clear
> Channel is down comparatively more because it has more
> assets, stations, and is a "diversified media company".

Univision, down 27%. Diversified media company.
SBSA off nearly 30%. Radio only.
Beasley off 26%. Radio only.
Entravision off 30% etc.

First, this has nothing at all to do with Howard Stern being off 6 stations.
Second, it has nothing to do with the politics of CCU or Viacom or anyone.

How sweet you are to the broadcast liars! Knowingly lying and refusing to correct mis-information- is now called "in-accurate opinions". In fact- ANYONE who has a history of lying about the facts- has simply just been giving his or her SINCERE IN-ACCURATE PERSONAL OPINION! ( I guess Clinton gave his sincere personal opinion when he said "I didn't have sex with that woman!"

I think my previous quote from the FCC ought to end this whole "discussion".

"Knowingly falsifying the news or knowingly spreading falsehoods on the air IS A VIOLATION OF THE PUBLIC TRUST" The FCC will not take any action UNLESS it receives evidence of intent to fabricate from extrinsic sources (insiders with personal knowledge of such intent to deceive).

So get it straight! The FCC CAN take action against liars on the
radio.

**

BPL AMONG HOT TOPICS FOR JULY ARRL BOARD SESSION

The American Radio Relay League's board of directors sits down for a=20
weekend of critical meetings.=20
Amateur Radio Newsline's Mark Abramowicz NT3V has the preview...

--

Broadband Over Powerline internet access is one of the hottest=20
topics on the ARRL board agenda.=20
It is likely BPL has been the subject of committee meetings leading=20
up to the weekend board sessions.

Dealing with BPL issues is priority No. 1 for ARRL President Jim=20
Haynie WB5JBP. Haynie tells Amateur=20
Radio Newsline in a recent interview, he expects the Federal=20
Communications Commission will act soon=20

on the matter. While it's difficult to put a timetable on how soon,=20
Haynie tells us he wouldn't be=20
surprised to see the panel come out with a decision before the=20
presidential election.

President Bush is solidly behind BPL as part of his broadband-
technology initiative - this despite=20
Haynie and the ARRL's plea for him to reconsider. Democratic=20
challenger John Kerry's campaign=20
position speaks of a variety of technologies for broadband but does=20
not directly mention BPL.

Haynie concedes the way the political winds are blowing, some form=20
of BPL activity is likely to=20
be approved.

But the 64-thousand-dollar questions are: How much and where?

With the National Telecommunications and Information Administration=20
already raising red flags about=20
interference, and a BPL industry spokesman throwing verbal missiles=20
at the amateur community, Haynie=20
tells us here at Amateur Radio Newsline he's hoping some FCC=20
commissioners might re-examine their=20
BPL positions.

Haynie calls the recent suspension of the Alliant Energy BPL project=20
in Cedar Rapids, Iowa, an=20
important step. And, Haynie says, he suspects the electric utility=20
industry will have to consider=20
any fallout and who could be next to answer an interference=20
complaint at the FCC.

As to complaints, Haynie says the ARRL will be especially vigilant=20
if BPL becomes a reality. He says=20
the organization will be before the FCC to press interference issues=20
with those who are cause them.

And, he has told Amateur Radio Newsline, he will also press the FCC=20
to fully empower those charged=20
with enforcement issues in the agency to go after BPL providers who=20
fail to resolve any interference=20
complaints.

Among the other items on the board agenda, the status of amateur=20
license restructuring which includes=20
provisions for a "no-code" HF license for entry-level hams.

The July board meeting also is where the announcement of the winner=20
of the Hiram Percy Maxim award=20
comes along with host of other ARRL awards.
=20
For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in=20

Philadelphia.

--

Check next week's Newsline for a report on the ARRL board happenings.

(ARRL, NT3V)

**

HAMSATS: ECHO TESTS CONTINUE

Testing of the newest ham radio satellite, ECHO, continues and all=20
is, as they say in the space biz=E2=80=A6=20
nominal. The remainder of this week is expected to be spent loading=20
some new code, testing the S=20
downlink and the UHF B transmitter. Note that the S downlink, when=20
in digital mode, will always be=20
at 38.4 kilobits or higher. It is not capable of 9.6 kilobits due=20
to limitations involved in making=20
it work properly at speeds up to 76.8 kilobits. AMSAT is pleased so=20
far with the strength of the=20
2.45W S downlink. At times the UHF A transmitter will be off or at=20
very low power. They will also=20
be testing transmitters at higher data rates. Listeners should not=20
be surprised or alarmed if the=20
UHF A transmitter is not on or if they are unable to copy it at 9.6k=20
during some orbits.

The Command Team is carefully checking off the tests and=20
measurements that are part of the commissioning=20
process. They ask everyone to be patient. And again, AO-51 is not=20
yet open for use. Any transmissions=20
aimed at AO-51 by other than command stations will slow down the=20
process and delay the day when it is=20
open for all to use.

The coloradosatellite.com/echo web site was off line for a few hours=20
last weekend due to a data center=20
move. Stations who want to upload telemetry should find it on line=20
now.

(WD0E, AMSAT)

**

SPACE: ARISS SCHOOL CONTACT LIST UPDATED

While we're on the subject of ham radio in space, the list of=20
Amateur Radio on the International=20
Space Station, or ARISS, school contacts has been updated. To check=20
if a school in your area is on=20
the list or to find out how to schedule a contact at your school=20
please visit www.amsat.org or=20

http://ariss.gsfc.nasa.gov. There is no "www" in that last URL. Of=20
course, these addresses will=20
be in the print edition of this week's Amateur Radio Newsline report.

(ARISS)
=20
**
Break 1

>From the United States of America, We are the Amateur Radio=20
Newsline, heard on bulletin stations=20
around the world including the Los Angeles Unified School Amateur=20
Radio Association Network serving=20
the students in Los Angeles, California.

(5 sec pause here)

**

RADIO LAW: MDS & ITFS SPECTRUM RECHANNELIZED - MDS BECOMES BRS

Big changes are coming to the Multipoint Distribution Service and=20
the Instructional Television Fixed=20
Service. These are better known by the acronyms M-D-S and I-T-F-S.

As part of its ongoing effort to promote the deployment of wireless=20
broadband services, the FCC has=20
adopted a Report and Order and Further Notice of Proposed Rulemaking=20
dramatically changing the rules=20
governing MDS and ITFS operations in the 2500-2690 MHz band. =20

For starters, the Order renames the M-D-S service the Broadband=20
Radio Service or B-R-S. It does=20
however maintain the I-T-F-S label for Instructional Television=20
Fixed Service licenses and operations.=20
The newly rechannelized I-T-F-S slash B-R-S band will group high and=20
low power operations together=20
in spectrum chunks. This, the agency says, will make low power two-
way data communications possible=20
in some parts of the band. =20

Finally, to make all this happen the band will soon become 5 MHz=20
larger. This, as restructuring of=20
other services in the adjacent electromagnetic spectrum permits the=20
FCC to extend the low end of=20
this band down to 2495 Mhz. (CGC)

**

RADIO LAW: FCC CLARIFIES ITS ROLE REGARDING INTERFERENCE AND=20
CUSTOMER EQUIPMENT

The FCC has clarified its role regarding interference issues,=20
consumer antennas and Part 15 unlicensed=20

equipment. Regarding antennas, we all know that consumers have the=20
right to install and operate -=20
on property they control - antennas for over-the-air broadcast,=20
terrestrial and satellite reception. =20
Now the regulatory agency has added license-free Wi-Fi antennas of=20
one meter or less to the list of=20
what may be installed. The same one meter size limit also applies=20
to antennas used in conjunction=20
with fixed wireless services that are licensed by the FCC.

In the area of radio frequency interference or R-F-I, the FCC says=20
that it and it alone holds exclusive=20
jurisdiction over the regulation and resolution of R-F-I issues. It=20
adds that regulation of R-F-I=20
phenomena shall be imposed only by the Commission noting that both=20
the FCC and the federal courts=20
have overturned attempts by third parties to regulate RFI matters. =20
This, in light of the FCC's=20
exclusive authority in this area.

To read more go to: =20
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1844A1.doc =20
(CGC)

**

ENFORCEMENT: CATV LEAK RESULTS IN $6400 FINE

A cable TV system in Cornersville, Tennessee has been fined for=20
excessive signal leakage in the=20
aircraft communications band. Small Town Communications Partners=20
has been ordered to pay $6,400=20
for excessive leakage on 121.2625 MHz.

At that frequency a maximum leakage of 20 microvolts per meter at a=20
distance of at least three=20
meters from a CATV cable is allowed. The FCC says that the measured=20
leaks in this case ranged=20
from 255 microvolts per meter to 2080 microvolts per meter. =20

The Commission notes that excessive cable TV leakage can interfere=20
with a wide variety of communications. =20
This can include emergency services, aviation, and Amateur Radio.

More is on-line at=20
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1751A1.doc =20
(CGC)

**

ENFORCEMENT: DIREC-TV FINED FOR UNAUTHORIZED SATELLITE MOVE

The Commission has proposed an $87,500 fine against DIRECTV, Inc. =20
This for repositioning its=20

DIRECTV 3 satellite without FCC authorization.

DIRECTV had filed a request with the FCC for special temporary=20
authority to relocate the DIRECTV 3=20
bird, but admits that its employees began repositioning the=20
satellite the next day, without waiting=20
for Commission approval.=20

In setting the amount of the fine, the FCC noted that strict=20
adherence to the rules governing=20
modification of satellite authorizations is critical to minimizing=20
the risk of collisions between=20
satellites. (CGC)

**

FCC INTRODUCES NEW EXHIBIT ON HISTORY OF THE INTERNET

The FCC has introduced the third in a series of exhibits on the=20
history of various communications=20
technologies. The latest presentation focuses on the history of the=20
Internet, including the=20
communication technologies used to access the World Wide Web. More=20
is on line at=20
www.fcc.gov/omd/history (CGC)

**

ON THE AIR: THE .275 YOUTH GROUP NET

Timothy Little, W-8-L-B-O has announced the start-up of a new 40=20
meter 275 Youth Group. =20
According to his posting on the Q-R-Zed dot com super site, this is=20
an informal ragchew group=20
that meets every Saturday at 9:00 P.M. Eastern time on 7 point 275=20
MHz, +/- 10 KHz.=20

Little says that the main purpose of the net is to promote the use=20
of HF by younger hams so that=20
they can get to know one another. The net also tries to help them=20
perfect their operating skills=20
including Morse code operation and D-Xing. =20

Anyone young or young at heart is invited to take part. More=20
information about this net is on=20
line at www.275youthgroup.4t.com )QRZ.com)

**

THE SOCIAL SCENE: NORTHERN ALABAMA DX BANQUET=20

The North Alabama DX Club has announced that its annual DX Banquet=20
will be held in conjunction=20
with this year's Huntsville, Alabama hamfest on August 21st. The=20

guest speaker will be Jess=20
Lewis, K-R-4-O-J, from the T-33-C 2004 Banaba Island DXpedition.=20
Tickets are $25 each and available=20
from the NADXC in care of Vic Holland, 219 Cedar Pond Drive,=20
Madison, Alabama 35757-7633. For=20
additional information phone 256-721-9106 or E-mail k4rvh@arrl.net. =20

CHANGING OF THE GUARD: ASCII DEVELOPER NOW S.K.

Bob Bemer, a computer pioneer who published warnings of the Y2K=20
problem in the early 1970s and=20
helped invent a widely used coding system, has died. This,=20
following a battle with cancer.
=20
While not a radio amateur, Bemer played a major role in how the=20
world's computers operate and,=20
indirectly, in how hams communicate today. He began his career in=20
1949 working at companies including=20
Rand, IBM, and Honeywell. He also helped develop the ASCII coding=20
system that is used to represent=20
letters, numbers and other characters in the data world. He also=20
contributed the escape key and the=20
backslash to the computer language.=20

Bemer first published warnings of the Y2K computer problem in 1971=20
and again in 1979. He also made=20
several public appearances to discuss the issue in the years leading=20
up to the millennium.

Bob Bemer died Tuesday, June 22nd at his home some 120 miles west of=20
Dallas, Texas. He was 84. (Published news reports)

**

EMERGING TECHNOLOGY: FEW KNOW ABOUT DIGITAL TV

The General Accounting Office says that more than 80 percent of=20
Americans are either unaware or only=20

"somewhat aware" of the transition to digital television signals. =20
But federal officials have=20
expressed shock and indignation at the survey results.=20

Congress plans to sell the analog spectrum that will become=20
available when TV stations convert from=20
analog to digital. Lawmakers are counting on the money to help=20
balance the budget. However, the=20
digital transition may be years away unless more consumers start=20
buying digital TV sets and most=20
are not willing to pay the additional cost. (TechBriefs)

**

EMERGING TECHNOLOGY: CELL PHONE "WAITING LOT" IN OPERATION AT=20
LINDBERGH FIELD

Following the lead of several other busy airports around the nation,=20
officials at San Diego's=20
Lindbergh Field have opened a convenient "cell phone waiting lot." =20
This is a place where drivers=20
can park for up to an hour while awaiting phone calls from arriving=20
passengers. Airport managers=20
hope that the new lot will cut down on the congestion caused by=20
vehicles circling the airport loop,=20
waiting to pick up passengers. More is on-line at=20
http://tinyurl.com/yplws (CGC)

**

ON THE AIR: 6 METERS ACROSS THE ATLANTIC POND

It's looking like it could be a big DX season for hams and SWLs on=20
both sides of the Atlantic. =20
GB2RS reports that during a Sporadic E opening on June 19th a path=20
opened from Europe to North=20
America. The Maximum Usable Frequency rose at least as high as the=20
FM broadcast band. A North=20
American station was received on and recorded at 88.5 MHz between=20
13:10 and 13:30 UTC. During=20
the event, trans-Atlantic television carriers were also received on=20
55.25, 61.25, 67.25 and=20
83.25 Mhz. (VHF reflector)

**

50 & ABOVE: 144 MHZ QSO DATA WANTED

If you've made any long distance 2-meter contacts in excess of 1,600=20
miles, or 2,600 kilometers,=20
Volker, DF5AI wants to know the details of your contacts. He's=20
interested in the frequency, the=20
UTC time & date, and particularly the grid square locator. He's=20

also quite intrigued in double-hop=20
sporadic E skip. He can be contacted via his website. It's in=20
cyberspace at www.df5ai.net (VHF Reflector)

**

WORLDBEAT - ISRAEL: NEW SIX METER BEACON IN ISRAEL

4X4SIX is the new 6 meter Israeli beacon operating on 50.080 MHz. =20
4X6ON and 4Z5AY built the=20
station which announces its call sign on CW around the clock. The=20
beacon is located in grid=20
square KM72JB running 5 watts out to a J-Pole antenna. (Hagal)

**

DX

In D-X, the Ohio Penn D-X Newsletter reports that DL3PS and VE3ZIK=20
will be active on 40-6 meters=20
from Bilice, Croatia through July 31st. The call signs being used=20
are 9A slash VE3ZIK and 9A slash=20
DL3PS. While VE3ZIK is one of the Web Administrators for the=20
www.contesting.com info website, there=20
will be no QSL information there until August 3rd.=20

Meantime word that D-H-9-Y-A-T will be active portable CU7 from the=20
Azores. Listen for him from=20
August 3rd to the 20th. Activity will be on 40, 20 and 15 meters=20
QRP on CW. QSL this operation=20
via the bureau. (Various DX sources)

**

THAT FINAL ITEM: MUSEUM SHIPS CASTING FOR CONTACTS

And finally this week, dozens of ships from around the world=20
get "radio-active" July 17th and 18th=20
for the annual Museum Ships Weekend Event. Amateur Radio Newsline's=20
Mark Abramowicz, NT3V is back=20
with us and he checks in on preparations being made about the U.S.S.=20
New Jersey....

--

Dave Burgess, WA2TVS, is chief engineer for the Battleship New=20
Jersey Amateur Radio Station aboard=20
the New Jersey. Look for NJ2BB (New Jersey 2 Big Battleship) to be=20
very active during the event.

Burgess says the weekend was the brainchild of the USS Salem Radio=20
Club, K1USN, in Salem, Mass.=20
He says it actually started in 1997 as a way to get museum ships at=20
dry-docks around the world to=20

get on the air by way of amateur radio.

Burgess says it's the New Jersey's third year taking part.

"Last year, the number grew to about 87 or 88," Burgess says. "Right=20
now I think the pre-registration=20
right now is about 77. But seems like there's always a half a dozen=20
or so right at the last minute=20
that get their act together and get on the air."

Burgess says the event gives radio operators around the world a=20
chance to contact a variety of these=20
special ships and their volunteer crews.

"One is just to have fun and a reason to get the ships on the air,"=20
Burgess says. "Of course, whoever=20
is in charge of taking care of the ship gets some PR out of it, we=20
hope.

"They have an opportunity for the public to see amateur radio which=20
is new to a lot of people. But to=20
advertise the ships worldwide. I never knew there were so many ships=20
out there. Just museum ships that=20
is. It's amazing how many there are out there and what their=20
diversity is."

Burgess says there are tugboats, river boats, submarines and even a=20
midget German submarine left over=20
from World War II. All are part of the museum ship flotilla.

He says there's no contest exchange involved in this one. Ship=20
operators get on the air and look to=20
contact land-based stations as well as other museum ships. It's a=20
chance, Burgess says, to showcase=20
a ship and its history. And, of course, there's an exchange of QSL=20
cards and you can be guaranteed=20
some pretty impressive history and photos of the ship you contact.

For the New Jersey's part, Burgess says he's planning an active=20
weekend with operations through the=20
evening of July 18th.
=20
"We'll be on all HF bands, probably concentrating on 20 (meters),=20
but we have capabilities (with the)=20
ship's antennas to do 160 through 10 meters," Burgess says. "We'll=20
be on all modes. This year we'll=20
be introducing true, green-key operation for teletype. We'll be=20
using the ship's old mechanical teletype=20
machines to get on the air."

Look for NJ2BB, Burgess says, for a memorable QSO and QSL.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in=20
Camden, New Jersey, the home of the=20
Battleship New Jersey.

--

Thanks Mark. This sounds like a great opportunity to collect some=20
very interesting "wall paper" for=20
the ol' shack.

**

---

Ohh, that's even worse. "Bomb"ing your own era? I'da loved to have grown up when you did, pal. At least you HAD real music back then where talent actually SANG. Today one doesn't even have to sing, play an instrument(computer does that for you) or know how to read music(which I don't but I'm no performer) to hit the top 10. Today's scene is about as creative as a toiletseat compared to 30, 40, 50 years ago.

Then my bet is the local affiliate is running news network inventory
in Air America's shows in the local positions.

Air America doesn't have the critical mass necessary to command a buy
from a company like Shell. In addition, a liberal slant isn't
something a giant oil corporation generally seeks.

The last time something like this surfaced it turned out that WLIB was
airing a schedule and it either was carried by Air America or the
complainants were listening to WLIB's, not the network's spots.

Shell's CEO (much to the distress of the other world oil concerns) recently made a statement that the world needs to get off of the carbon (e.g. oil and other fossil fuels) economy, and fast! This, to my mind, makes them far more progressive than anyone else out there (although BP is making some noise that might indicate they're moving into other energy markets, as well).

So speaking to other progressives on outlets like Air America isn't so big a surprise....they may even want to hear more about what Shell has to say.

> extrinsic sources (insiders with personal knowledge of such intent to
> deceive).

I'd take this so-called "quote from the FCC" more seriously if your could document the source, i.e., CITE an reference document rather that identifying it as a "quote from the FCC." A real "quote from the FCC" has to be one that can be found exactly in the words in which you present it here in a FCC document from which it's been taken word-for-word. Anything else is, at best, a paraphrase and is not likely to be totally accurate.

For one thing, the language is very unlike that of the FCC. I doubt if the FCC in any official document ever used the terminology "knowingly spreading falsehoods" or "insiders." You're free to prove me wrong, but you won't have done that unless you provide citations directly to FCC documents.

Your thesis has been so well shot down by so many knowledgeable people in this group that you'd be well-advised to give up on it. Several people here who have extensive knowledge of broadcast law have scorned your take on the matter of lying. They've been justified in doing that. It might be best that you quit while you're behind.

>
> So get it straight! The FCC CAN take action against liars on the
> radio.

As a _general_ thesis, the above statement, is simply ludicrous. It is far, far, far too broad. How many times to you have to be told. Give it up.

Interesting, but irrelevant. The relevant period to compare
is the last 6 months. It was 6 months ago that Clear Channel
fired Howard, not a year ago.

I clipped the rest since it either followed along the same
irrelevant path or because I covered P/E ratios in my
response to Tim.

It is about politics, democracy, and freedom. Clear Channel
is the same station that issued a banned-song list after
9/11, stopped playing Dixie Chicks after they criticized
Bush/Cheney, and issued another banned song list after
the Superbowl indecency erectile disfunction.

Except that they have the lowest P/E ratio of the group.
A P/E ratio is an indicator of optimism about future
prospects for a company. The higher the ratio, the more
investors expect them to do well.

So Clear Channel must be in some other businesses, right?
They have a near monopoly on concert/event promotions,
so that should not be a problem.

The other industry Clear Channel is invested in has
been up more than the radio industry. Compare Lamar and Obie.
Both are outdoor/billboard, which is Clear Channel's
other major business and works in synergy with their event
promotion business. In fact, Lamar and Obie are both
smaller and losing money. Both are up over the last
6 months. What does that tell you?

It tells me that you are a republitard.

And that Howard and his listeners are beating the F
out of Clear Channel.

> to equate the removal of one show from six stations as a
> financial disaster at least in this case would be insane.

I am not equating it with financial disaster. That is the
exagerated non-sequitur you created. My argument is simply
that dumping Howard had a negative impact on profitability.
That, as a business decision, they were better off with
Howard than without. The stations they dropped him from are
experiencing lower ratings (smaller audiences), which leads
to both less advertising and lower ad rates (smaller profit
margins). Add to that a boycott of Clear Channel stations,
products, and advertisers, and you have a more wide spread
impact than just the 6 markets.

probably so but improvable unless you are privy to their accounting records.

> That, as a business decision, they were better off with
> Howard than without.

faced with huge fines id say it was more of a no brainer. they can always
put him back on when the political climate eases up.

The stations they dropped him from are
> experiencing lower ratings (smaller audiences), which leads
> to both less advertising and lower ad rates (smaller profit
> margins).

its normal that when a programming changes that the ratings initially drop.

Add to that a boycott of Clear Channel stations,
> products, and advertisers, and you have a more wide spread
> impact than just the 6 markets.
>
stations love boycots. they have almost zero effect other then to generate
free media attention.

These are the lies that won't go away. Clear Channel never issued a
"banned" song list and never stopped playing the Dixie Chicks.

Ohh, that's even worse. "Bomb"ing your own era? I'da loved to have
grown up when you did, pal. At least you HAD real music back then
where talent actually SANG. Today one doesn't even have to sing, play
an instrument(computer does that for you) or know how to read
music(which I don't but I'm no performer) to hit the top 10. Today's
scene is about as creative as a toiletseat compared to 30, 40, 50
years ago.

They are making money there and in the following:

>> The other industry Clear Channel is invested in has
>> been up more than the radio industry. Compare Lamar and
>> Obie. Both are outdoor/billboard, which is Clear Channel's
>> other major business and works in synergy with their event
>> promotion business. In fact, Lamar and Obie are both
>> smaller and losing money. Both are up over the last
>> 6 months. What does that tell you?
>
> pretty much nothing that has to do with radio

Precisely. In other words, and I will write this as
slowly as possible for the republitards out there.
Their other lines of business are successful. Those
other businesses have been up in the stock market for
companies that operate only in that line of business.
Therefore, even though they are not down as much on
the surface, they actually have to be down much more
in the radio business to adjust for the amount the
other businesses are up.

>> It tells me that you are a republitard.
>>
> one of the advertising fallacies: if you cant make a valid
> point call someone names

Blame it on the republicans that trained me to
serve as an example of morality, integrity, and
accountability.

>> And that Howard and his listeners are beating the F
>> out of Clear Channel.
>>
> just my opinion but stale programming and almost 100%
> automation are doing a better job of driving listeners away
> then any amount of fan action could achieve

That has been true since 1997 or 1998.

>> I am not equating it with financial disaster. That is the
>> exagerated non-sequitur you created. My argument is
>> simply that dumping Howard had a negative impact on
>> profitability.
>
> probably so but improvable unless you are privy to their

They are a public corporation. If it were earlier in the
day, I might go dig up some annual reports and look to
see if it breaks down by industry.

>> That, as a business decision, they were better off with
>> Howard than without.
>
> faced with huge fines id say it was more of a no brainer.
> they can always put him back on when the political climate
> eases up.

That is the error. They are 1 of the actual sources of
the climate of censorship. The owners are personal friends
of Bush. The fine they paid was pure publicity, probably
taken directly from their advertising/PR budget.

> The stations they dropped him from are
>> experiencing lower ratings (smaller audiences), which
>> leads to both less advertising and lower ad rates
>> (smaller profit margins).
>
> its normal that when a programming changes that the ratings
> initially drop.

Excuses, excuses. Write them on your Clear Channel job
application.

> Add to that a boycott of Clear Channel stations,
>> products, and advertisers, and you have a more wide spread
>> impact than just the 6 markets.
>>
> stations love boycots. they have almost zero effect other
> then to generate free media attention.

Are you even giving what you write half a thought? If that
is the case, it would have made even more sense to keep
Howard. Free media attention and no initial drops.

We are talking about a company that has consistently
censored anything anti-Bush.

## 1805. New Talk Show on 1220 WHKW

This has noting to do with the morning shows on 6 stations our of 1200, no
matter how you want to position it.

Clear Channel stock has very closely treacked the sector, with no indication
that anyone gives a hoot about Howard on wall Street.
>
> I clipped the rest since it either followed along the same

Wrong. Several PDs, on thier own, made lists of songs tht might be
sensitive, especially if played near news reports or commentary about 9/11.
It was an example of self-discipline, not censorship. No song was banned.

> stopped playing Dixie Chicks after they criticized
> Bush/Cheney,

Actually, many non-Clear Channel stations did this before Clear Channel ones
did. Nearly every country station in America reacted to listener outrage
about the Maynes comments and yanked the songs. The first were owned by
Cumulus, in fact.

> and issued another banned song list after
> the Superbowl indecency erectile disfunction.

No such thing. Urban legend, like the other two.

A low PE ratio is the best. It indicates that the price per share divided by the earnings per share yields a smaller number. A low EPS indicates that the share price is supported by real earnings of substance.

Your definition is wrong. P/E is a measure of past performance, not of attitude.
>
> I am not equating it with financial disaster. That is the

Censorship is done by the government. When a company in the private sector makes decisions on what or what not to play, it's called first amendment rights.

Censorship would be the government telling a cable news channel that they cannot use a particular slogan.

# 1809. Sirius audiovox antenna for house - house antenna or car? Which & where to point?

Newsgroup: rec.radio.broadcasting
Date: 2004-07-20 21:12:05 UTC
From: terryparker@myself.com

I've got a "portable" Audiovox Sirius radio receiver. I installed it in the car and it works fine. I also have the "home kit", which uses a small "indoor/outdoor" antenna. Unfortunately my stereo is on my northern wall and the wire is not long enough to go outside and run to the corner to get a southwest exposure. I've tried the antenna sitting inside the window pointed north, up about 45 degrees, which seems best but is still not good enough for consistent signal (it cuts in and out). I moved it outside the window and it's pretty much the same.

I'm wondering a couple of things -- is there any way to add an extension onto this antenna wire? I haven't seen one.

Can I buy another magenetic car antenna and stick it to the house gutter and would this work any better? Other solutions?

Also, I can't seem to get as good of reception now as I got when I started messing with it and am wondering if I pinched the wire too much when I ran it out through my "crank window" to get it outside. I now get very little signal no matter what, with strong ugly "brrrrp" noises coming about 2-3 second intervals. Is the antenna wire highly sensitive to being pinched and would this be a possible result if it were?

Thanks in advance,

Terry

>years ago.

That's exactly what my parents said 30 years ago, though.

I'll say that top-40 is far more homogenized than it was when I was a kid. It used to be there were a wide variety of different musical styles all on the same chart, but now things are much more uniform. I think that's bad, and I think it bores listeners as well.

BUT, I don't think anyone can claim that "Yummy, Yummy, Yummy, I've Got Love In My Tummy" is any better than the worst song on the charts today.

When the government controls a company and tells is what to do in order to get rewarded with more station licenses or get punished with not getting those licenses renewed, then it is censorship.

Don't be fooled into thinking that a company that was making a lot of money with Stern would decide on their own to drop him and lose money.

The fact that Clear Channel is crying and complaining to the government now that they are doubly screwed now that Infinity is putting Stern back in those markets and hurting the profits of Clear Channel stations all the more, should wake you up to what is really going on here.

> Censorship would be the government telling a cable news channel that they
> cannot use a particular slogan.

Or telling Clear Channel they can not have any on air talent saying anything negative about Bush.

Not this again. Look, this is not an investment how-to
course. If you are thinking about investing, everything
else equal, a low PE ratio is best. Correct. It means
that the stock is priced relatively low compared to its
earnings.

So why would Clear Channel have the lowest relative value?

> Your definition is wrong. P/E is a measure of past
> performance, not of attitude.

Of both, because stocks are bought and sold both on
past performance and perceptions their future success.
If the stock prices contains attitude, then the P/E
contains attitude.

In comparison, republitards are all attitude, no performance.
But you can always buy one.

>> simply that dumping Howard had a negative impact on

> are not even a grain of sand on a beach to CCU.

That is probably true, unless morning drive shows drive
ratings for the station at other times and the stations are
in large markets. They sure seem to be crying a lot about
Stern coming back in those markets for a company that should
not care. If not for the billings, why the tears at his
return?

Well, no....the issue here is whether any entity can use a deceptive slogan in order to appear to be what they are not. Just as a timeshare company can't use the slogan "where the real estate is free" (unless it IS, of course, but what would be the point of that?) the FTC is being called on to refute Fox's claim that they are "Fair and Balanced", when they are, by the consensus of professionals qualified to make such judgements, not. Regulation is not censorship, as there are, despite what your take on the Constitution might be, limits to "free speech". There are numerous Supreme court cases which bear this out...of course, this one, if it gets that far, will probably have to go that far to be determined one way or the other.

I'd have to agree with your parents. The musicianship in the big bands was miles ahead of almost anything coming out of the rock and roll era. And I say this despite being of the boomer generation myself and having grown up on rock and roll. Nevertheless, I know quality when I hear it.

Rock and its descendents are, basically, glorified folk music that has always extolled the virtues of emerging from the People, whether from the "street," the "garage," or the "hood." Music of our parents' generation came from the sophisticated pros in Hollywood and on Broadway, all of whom were proud of their craftsmanship. BIG difference.

Here we go again! I posted this elsewhere on this message board.

Here's the FCC's letter to me from Norman Goldstein; Complaints and
Investigation Branch; Enforcement Div; Mass Media bureau of the FCC:

"The Commission has stated on several occassions that deliberate
falsification or distortion of news or information is patenntly
inconsistent with the public interest. However, in light of the
sensitive First Amendment values that are involved, an inquiry will
not be made of a station unless we receive extrinsic evidence of

deliberate distortion or falsification--for example, statements from insiders or those who have direct personal knowledge that facts were deliberately falsified. In this way, the Commission does not become a national arbiter of the "truth" of what is broadcast over the airwaves, nor does it judge the wisdom or accuracy of what is broadcast.

In the "absence of substantial extrinsic evidence or documents that on their face reflect deliberate distortion" the Commission does not deem it useful or appropriate to inv
Signed, Norman Goldstein- FCC Mass Media
Bureau

Now what else can you make of that other than:

1. The affirmative of his statement applies: i.e. :In the PRESENCE of substantial extrinsic information which reflects deliberate distortion- the
commission WILL make an inquiry!"

2. If the FCC becomes suspicious that broadcast laws are being violated- here is a crime investigating agency that does not go out and investigate their suspicions- rather, by their own admission- they sit in their offices by the phone- waiting for some "insider" to CONTACT THEM! Can you believe that "UNLESS WE RECEIVE STATEMENTS FROM INSIDERS- we will not take acton!"

Funny how playing a song over and over- inflames the public and FCC takes action on payola to D.J.s because of public clamour- but continually lying about products
raises no red flags at the FCC because, I guess, they don't get enough complaints!

The FCC says that falsification of the news is "Inconsistant with the public interest!"

They also say that "They WILL take action (make an inquiry of a station)if they receive information from extrinsic sources that can substantiate intentional falsification or distortion."

If falsification of the news, or medical facts, or product information on the air is against the public interest- will you please give me the name of the agency or person who looks out for the public interest in this matter of broadcast fraud and to whom I should play my tapes?

Is there such a thing as Top-40 anymore? I think at some point, everyone was so into their own format (rock, rap, alternative, etc.) that few people explore any music out of their own "ghetto". Probably has to do as much with self identity issues as it does with plain intellectual laziness...

Sorry, I can't seem to find Bob Orban's reply to this. But I agree with
Bob that the encoding scheme is very robust about dealing with group delay
issues. Even so, I have found the actual skip performance poor to the
point of unusability.

Bob, do you have a citation on any actual measurements of this stuff?
Ionosonde data is easy to get, so it should be really easy to build a
simulation of ionospheric distortions in matlab or something, even if you
just take into account group delay and multiple reflections. Has anyone
actually done any simulations on the current encoder to see how it survives
under various simulated skip conditions? I'd be curious to see which of
the various skip characteristics is the most serious issue.

I'm in almost the same boat. Moving this week, with both Sirius Audiovox PNP1 and XMPCR home kits, and expect to use an antenna extension for the XMPCR to get around a brick wall to my south. While I can't formally proclaim compatibility, I can advise that your chances are excellent with the Delphi 50' extension cable, available at:

http://store.myradiostore.com/anexcasa.html

That cable can extend an XMPCR antenna, which itself is compatible, in my testing, with the home antenna for the Audiovox PNP1. Because of a few mm of additional shielding, the XMPCR antenna header doesn't fit as deeply into the Audiovox cradle as Audiovox antenna does, but it does deliver a good Sirius signal. So the XMPCR-compatible extension cable is definitely worth a try.

For Sirius at home, best to aim your antenna toward the opposite coast, or straight up if you're in the midwest.

Good luck

Jerome

# 1823. Need ROANOKE natives for VO

Newsgroup: rec.radio.broadcasting
Date: 2004-07-21 19:00:27 UTC
From: scotty@scottymatthews.com
Message-ID: <cdmegb$8ls$1@xuxa.iecc.com>
Source record: 4563

I have a small VO project (2 local radio spots) in the works.
Open casting call for actors and amateur voice artists. No union
talent.
SPECIFICATIONS:
I will need one female voice to portray a real estate agent for a
single VO, and a 20-something male and female who can play a young
married couple, and who can record together for natural interaction in
a conversational style.

You'll need a professional-quality, low-noise recording setup,
The ability to send the dry voice-over in a studio-quality MP3 file,
and I'll need to be on the phone to direct the VO.

Will require maybe 15 minutes of work. Pays flat rate $50 per voice.

Requires ACTUAL Roanoke, VA dialects. Delivery style must be natural
and emotionally sincere--no "DJ" delivery. No voices that are
currently familiar to Roanoke radio or TV audience.

Send contact information (no demos!) to: scotty@scottymatthews.com

Thanks!

> wall Street.

Listen to the show. You would be surprised how many
people on Wall Street listen.

>> It is about politics, democracy, and freedom. Clear
>> Channel is the same station that issued a banned-song list
>> after 9/11,
>
> Wrong. Several PDs, on thier own, made lists of songs tht
> might be sensitive, especially if played near news reports
> or commentary about 9/11. It was an example of
> self-discipline, not censorship. No song was banned.

Of course, the PDs just happened to have the same list,
and Clear Channel just happened to be the only station
with PDs sharing such a list:
http://www.f---edcompany.com/extras/clearchannel_email.cfm
http://www.chartattack.com/damn/2001/09/1707.cfm
http://news.dmusic.com/article/6118
http://slate.msn.com/id/1008318/

And the torture camps in Iraq were just several soldiers
releasing tension on their own, even though Rumsfeld
approved it. Clear Channel has the advantage of not being as

closely watched as the White House, but blaming underlings is
the standard, accountability avoidance method in
corporations. It allows them to punish/fire/relocate/rehire
without being sued.

>> stopped playing Dixie Chicks after they criticized
>> Bush/Cheney,

> comments and yanked the songs. The first were owned by
> Cumulus, in fact.

Do you have a reference to support this?
http://www.metroactive.com/papers/metro/04.24.03/censorship-0317.html
http://iml.jou.ufl.edu/projects/Spring04/Hale/index2.html
http://www.detnews.com/2003/entertainment/0303/29/d01-121866.htm

Or is that a legend plucked from your extensive urban
library? Are we talking about first by a day or a
week?

Then the next question is, who was Cumulus owned by
at the time and what connections do they have, as
a bible-belt radio broadcaster second in size
to only, hmmm, Clear Channel?

>> and issued another banned song list after
>> the Superbowl indecency erectile disfunction.
>
> No such thing. Urban legend, like the other two.

Of course. Just call it an approved playlist and
leave off the songs.

You would probably have a better chance on EBay. I have "Broadcasting"
yearbooks dating back to 1973. They will never have historical value
for reasons I will not discuss here.

When it came time to decide, I asked myself which cell phone company I really loved. The answer- none. Therefore, if you love cell phones with mandated contracts and everything in the companies favor, you go with Sirius. That includes a years non-refundable subscription, perhaps a "lifetime" subscription which is good for only the lifetime of one single radio. Wanna change cars? Change to fancier receiver? You lose the money and have to buy another subscription. Higher activation fees. Found this out at the last minute and went with XM for that reason. No regrets.

On 14 Jul 2004 14:29:14 GMT, jfiglio1@nycap.rr.com wrote:

>I think the ad issue is meaningless. Both services have no ads on their music channels. Period. To me, the real difference is between their respective mix of service offerings. Sirius has a much stronger news, public affairs, sports (*ALL* NFL, NHL, NBA games), international content (WRN with content from two dozen international broadcasters, as well as BBC News 24/7 and soon CBC Canada) and topical discussion line-up. If your interests skew this way, Sirius is the better choice for you. If you're looking for a greater emphasis on music, XM should get first consideration (although Sirius does fine there as well, as far as I'm concerned.)

Radio is no longer a growth industry. They killed themselves when Docket 80-90 allowed over a dozen stations in markets of less than 100K residents. Everyone increased power and competition all over. Then they increased commercial time. It became another worthless, unlimited commodity. All without increasing the ad dollars in a market. Always too stupid to learn from past mistakes, the radio industry is about to do it again and double the ad time available in all markets, and cut their audio quality at the same time. IBOC now has a way to reduce the bit rate and allow a second entirely independent audio channel.

Watch for the same to happen with the OTA digital tv multicasters. Their brains are also too far up their butts to see what happens when you quadruple the number of channels transmitted, quadruple the commercial air time available, quadruple program acquisistion costs and dont increase the potential audience (market size) or ad dollars.

There is no reason for OTA radio or television stations to exist.

AAvoid their stock at all costs, until they convince the government to allow foreign ownership. Then when Bin ladens family starts buying them up, SELL!!! Last exit to Brooklyn... last chance to turn around...

Were you mislead? There's no need to sign a long term contract with Sirius. One signs up for a year only if one wants a more favorable rate--ie: $9.99 a month vs. $12.95 a month for a month to month arrangement. It's offered as an inducement to make a long term commitment. So, too, the "lifetime" (of your receiver) arrangement is perfectly voluntary. (To me, that one was a non-starter--like making a bet that that the receiver was good enough and well made enough to outlast the payment.) The activation fee is also mitigated some by signing up online.

So, I still think the real differences between the two have to do with the mix of program streams. (An average of a few bucks a month difference for what are--in reality--both premium services will be negligible for most provided the programming is what they want.) The fact that you say "no regrets" indicates to me that the programming offered by XM is satisfactory to you and that the different emphasis (more and more varied news/info channels) offered by Sirius was not sufficient for you to go their way.

It's great to have a choice! Glad you're happy. I have Sirius and I'm happy too.

Paul Van House: << You can post a record, run down the hall, go to the bathroom, and be back in 2:50 for the segue. ... You still have dreams of a song running out and not being able to find the control room door. >>

LOL Back in the late 1950s, when I was Chief at KHBM, an Arkansas day-only kilowatter, I had a TV shop in town and got free radio ads, plus a stipend, for keeping an ear out on its operation.

One day, a tune ran out and -- dead audio. I waited a minute or so, and then drove the three miles at warp speed. Just as I was driving up to the station, the DJ came on (he was my favorite DJ) and apologized to the listeners for the technical difficulty.

When I got inside, I asked, What happened? He said, "I went to the restroom at the other end of the hall but I had the runs and couldn't get back soon enough."

I told him that my customers know that I'm the tech for this station and "technical difficulties" could ruin what little good rep I have. Just tell them the truth next time. <G>

He enjoyed getting out The Book and recording commercials for me by filling in the blanks appropriately.

By the way... When I visited the station in 2000, one of the old Gates reel-to-reels was still being used, in this case, by a local preacher to record a sermon. (Or was it a Bellow and Howl unit?)

Since Clear Channel has not received any significant number of new station grants (maybe non... I am not sure), this is a moot point. Every station they have acquired has been via purchase or merger with the prior owner. There is no potential for government influence here.
>
> Don't be fooled into thinking that a company that was making a lot of
> money
> with Stern would decide on their own to drop him and lose money.

They were not making that much money, reative to the enterprise billing, to the fines, and to the potential for license endangerment.

> The fact that Clear Channel is crying and complaining to the government
> now
> that they are doubly screwed now that Infinity is putting Stern back in

> should
> wake you up to what is really going on here.

They are not complaining to anyone. They have filed a countersuit against Stern and his agent over the contract. They seem to believe they should not have to pay the contracts since Stern's show subjected them to fines, endangered the licences and presented no guarantees of future performance.

That, obviously had nothing to do with it. The issue related to indecency, not politics.

I don't have the citations at hand, but Googling Digital Radio Mondiale or DRM
Radio should locate the site containing the DRM white papers, which discuss
the issue of skywave reception at some length. I don't believe that anything
similar exists for iBiquity's AM system, but comparing the details of its
modulation scheme (symbol spacing and number of carriers in the COFDM bundle)
with the data from DRM should tell you a lot.

>
> Was "our" a Freudian slip?

No. I am not even a Clear Channel shareholder.

> Those were not 6 stations in
> tiny markets in the middle of Montana.

No, they were in medium markets, such as Miami, Louisville, San Diego. In several of them, the show was not doing at all well, in several others it was among the top rated shows.

However, we are talking about 4 salable hours a day out of 16 on 6 stations out of 1200. None were in a top 10 market, and several are getting better numbers post-Howard than before. We are talking about maybe one-tenth of one percent of radio revenues, and that is assuming no replacement revenues are generated (which is not the case).
>
>> Clear Channel stock has very closely treacked the sector,
>> with no indication that anyone gives a hoot about Howard on
>> wall Street.
>
> Listen to the show. You would be surprised how many
> people on Wall Street listen.

"Listen" is not the same as making investment decisions based on whether the show is on in Louisville. In other words, irrelevant.

>> Wrong. Several PDs, on their own, made lists of songs that
>> might be sensitive, especially if played near news reports
>> or commentary about 9/11. It was an example of
>> self-discipline, not censorship. No song was banned.
>
> Of course, the PDs just happened to have the same list,

> and Clear Channel just happened to be the only station
> with PDs sharing such a list:

That is what I said. Several PDs made up lists, and shared them. The idea was that no one remembers the lyrics to every song, and some might be inappropriate in the aftermath of 9/11, some might actually be appropriate in a morning show, and others subject to judgment calls.

The whole idea was to avoid offending listeners by playing a song that was inappropriate in that moment. That is, actually, what responsible broadcasters should do.

At no point were any songs prohibited or banned. Each PD at each station made individual decisions.

>> Actually, many non-Clear Channel stations did this before
>> Clear Channel ones did. Nearly every country station in
>> America reacted to listener outrage about the Maynes
>> comments and yanked the songs. The first were owned by
>> Cumulus, in fact.
>
> Do you have a reference to support this?

Yes. Billboard Airplay Monitor, BDS and R&R charts. Essentially, every country station in the US stopped playing Chicks songs. The reasons were really simple: either a listener poll or listener call ins demanding that their songs not be played.
>
> Or is that a legend plucked from your extensive urban
> library? Are we talking about first by a day or a
> week?

The non-play was almost instantaneous, based on listener rage. And it lasted for months. Gradually the songs came back, but at a lower level than before. As hard as it may be for you to believe, most stations ask listeners what to play, and, in this case, country listeners sent a loud message of, "don't play them."
>
> Then the next question is, who was Cumulus owned by
> at the time and what connections do they have, as
> a bible-belt radio broadcaster second in size
> to only, hmmm, Clear Channel?

Oxnard and Santa Barbara and Saginaw are hardly bible belt. And Cumulus is a public corporation, run by John Dickey. It has no affiliation with any other broadcaster. And it is not second in size. So you are wrong on your assumptions on every point.

> Of course. Just call it an approved playlist and
> leave off the songs.
> http://www.metafilter.com/mefi/31758

This one is simply outsiders who do not understand thaat radio reacts to public indignation, just like the Chicks. If you know that listeners don't want to hear songs, you don't play them. This is not banning any more than a supermarket, when offered mint flavored catsup, says, "a poll shows people don't want to buy it so we are not stocking it."
>
> Just like their zero tolerance policy toward anything
> the FCC considers indecent.
> http://www.cnn.com/2004/US/02/26/wbr.stern.suspended/

It's the law. The licenses are in jeopardy, and this is sensible diligence.

> opinion. You can decide. Oh wait - you want to decide for everyone else
> what they hear. Maybe you could try China. Or Cuba.

You have a real tough time reading a statement- then commenting on
it.

The statement was:

A person who says he is reading a news report verbatum right off the
> > wire service is a NEWS REPORTER

Simply agree or dis-agree with that statement.

Now- a person who intentionally mis-reads a news report off the wire
service and lies about the news report- is a LIAR.

You can now make a comment on that statement.

So you see- you label the person according to what he does. He is
both a news reporter and a commentator on the news. Some talk show
hosts are labeled, "info-tainers" . They entertain and give out
information. Some talk show hosts are labeled "dis-infotainers" ! They
"entertain" by constantly lying on the air.

take this test.

Do you know of any radio talk show hosts who:

1. Report the news?

2. comment on the news ?

3. Fabricate the news?

4. Mis-quote people in the news?

5. Tell jokes.

6. Lie about medical facts?

7. Promote the sale of consumer products by lying about their attributes.

8. Lie about topis in general science, environmental science,toxicology, etc.

If you can not give an example of all of the above- I think you need to listen to more talk show hosts- then you'll know what this is all about.

# 1836. Amateur Radio Newsline™ Report 1406 July 23, 2004

Amateur Radio Newsline™ Report 1406 July 23, 2004

Amateur Radio Newsline report number 1406 with a release date of Friday, July 23, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Two important youth awards are made and one Georgia ham shares in both of them. Find out who on Amateur Radio Newsline report number 1406 coming your way right now.

(Billboard Cart Here)

**

ANDREA HARTLAGE, KG4IUM, NAMED ARNEWSLINE(TM) YOUNG HAM OF THE YEAR

Andrea Hartlage, KG4IUM, has been named 2004 Young Ham of the Year by the Amateur Radio Newsline. And since this is a story about the success of the younger members of the hobby we asked our 2002 Young Ham of the Year, Josh Abramowicz, KB3GWY, to bring us the rest. Josh:

--

It was only a few years ago that I got a call at the Hawk Mountain Scout Reservation in Schuylkill County, Pennsylvania, telling me to call someone from Amateur Radio Newsline. It was during that phone call, that started out as an interview, I learned of my nomination and selection as the Young Ham of the Year.

Andrea, it turned out, was with her grandparents on vacation in Florida at the time she got the call on a cell phone from Amateur Radio Newsline's Bill Pasternak, WA6ITF. Here's her first reaction after getting the news:

"I'm very happy and excited."

Andrea, who earned her Extra Class license at the age of 14 - less than a year ago , was first licensed in 2000. She's 15 years old and going into her sophomore year at Grayson High School in Grayson, Georgia, north and east of Atlanta, where she's an honor student.

Andrea has been quite active since getting her ticket just four years ago.

"I do a lot of public service with parades and different types of marathons and things like that," she says. "I write the youth column for ARRL website. The Youth@HamRadio.Fun column. I'm assistant section manager for youth of the Georgia section and I'm a member of several local radio clubs."

Andrea is proud of her ham radio activity and is promoting the Amateur Radio service among youth.

"I spoke briefly at the Youth Forum in Dayton and I also led a Youth Forum at the hamfest, the local Rockville hamfest, and I also helped put hamfests on with the Alford Memorial Radio Club," she says.

She's also part of the ARRL's Big School Project and serves as a leader and teacher at the Richards Middle School Amateur Radio Club. There, she teaches electronic theory and has come up with a series of fun games to help reinforce the lessons.

So how did Andrea get started in Amateur Radio? She credits her father with kindling her interest.

"My dad interested me, he introduced it to me, Scott Hartlage, KF4PWI and he introduced me to Amateur Radio - I guess it was four years ago," she says. "I just sort of got interested in the public service side and I also serve as net control and I enjoy doing that and all the other things."

Andrea says Amateur Radio and all the opportunities it has given her, also has opened her eyes to some career possibilities.

"I'm possibly thinking about some kind of journalism and writing these (ARRL) columns helps me develop writing skills," she says. "And, I'm also thinking about some type of communication field that I really enjoy, like, for example, serving as net control and learning how to communicate effectively."

Andrea has made quite an impression on hundreds and hundreds of people already. You can bet it won't be the last time we'll hear from her, now and in the future.

>From the 2002 award winner - Congratulations, Andrea, the 2004 Young Ham of the Year.

For Amateur Radio Newsline, I'm Josh Abramowicz, KB3GWY.

--

Andrea Hartlage, KG4IUM, will get her award at a special ceremony on Saturday, August 21st at the Huntsville Hamfest. In addition to a plaque from Amateur Radio Newsline Andrea will receive a gift of Yaesu brand ham radio gear from Vertex Standard and a week at Spacecamp courtesy of CQ Magazine. Vertex Standard and CQ are both major corporate underwriters of the Young Ham of the Year Award program. (ARNewsline (tm))

**

ANDREA HARTLAGE, KG4IUM AND JAY THOMPSON, W6JAY, NAMED TO RECEIVE HIRAM PERCY MAXIM AWARD

At almost the same time that Andrea Hartlage was getting word that she had been named as Amateur Radio Newsline's Young Ham of the

Year
she was also hearing good news from the American Radio Relay League.
So was our 2003 Young Ham of the Year Jay Thompson, W6JAY.
Here's
Amy Abramowicz, KB3IJW, with more:

--

Both Andrea and Jay learned the ARRL's board of directors had selected them to receive the coveted Hiram Percy Maxim Memorial Award.

The ARRL board was so impressed by the nominations for each that they decided to give both of them the award. That means a cash prize of $1,500 each and a special plaque.

Amateur Radio Newsline spoke with ARRL President Jim Haynie, W5JBP. He says there's no doubt Andrea and Jay are the brightest stars among the young hams today.

"Both are just absolutely stellar examples of Amateur Radio and the young crowd that we're trying to encourage at the League," Haynie says. "You couldn't pick anybody any better than these two. And, I'm just amazed at their accomplishments and how they've managed to be so professional in all the things they've done.

"I've read some of their papers and when we chose them as the HPM award winners, what they had accomplished in their brief careers as amateur radio operators. The only thing I would say to young people is use these two people as examples because they are the best. They are the best of the best. And, speaking as president of the League, I congratulate them both and I admire them both because of what they've managed to do."

Mister Haynie also tells us the 1997 Amateur Radio Newsline Young Ham of the Year, Brian Mileshosky, N5ZGT, is in the same class. Brian was the 1999 Hiram Percy Maxim Award winner. He's now 24, married, heading to grad school in the fall, and still very active in Amateur Radio activities in New Mexico.

"All his work in Scouting and DFing and things of this nature that are the epitomy of Amateur Radio again for young people," Haynie says. "When I first met Brian, I was just blown away by his professionalism and how he handled himself as a young amateur. These three young individuals I think set the example and set the standard which we would like to see Amateur Radio go toward."

Mister Haynie says now that the Hiram Percy Maxim selections have been made for 2004, it's soon time to begin identifying candidates for 2005. You can find out more about the award, the qualifications, and the nominating process at www.ARRL.org.

To learn more about Andrea and Jay's accomplishments, you can also check out our website at www.arnewsline.org

For Amateur Radio Newsline, I'm Amy Abramowicz, KB3IJW.

--

We know that all of you join us in congratulating Andrea Hartlage, KG4IUM and Jay Thompson, W6JAY, on being selected top receive these very special awards. (ARRL S.W. Division Newsletter, ARNewsline (tm))

Break 1

More in a moment. Right now its time for you to identify your station. Tom Warrenbuerg if you please: "From the United States
of
America, this is the Amateur Radio Newsline, heard on bulletin stayations around the world, including the KA9EKG repeaster serving Delavan, Wisconsin."

(5 sec pause here)

**

HAM RADIO POLITICS: ARRL BARD MEETING

The naming of Andrea Hartlage, KG4IUM, and Jay Thompson, W6JAY, as winners of the Hirum Percy Maxim Award was only one of many decisions made at the recent meeting of the ARRL Board of Directors. Many of the Boards actions will impact on all of ham radio for years to come. Here's another Abramovich clan -- Mark Abramovich, NT3V, with
that part of the story.

--

In an historic step, the ARRL's board approved the launch of a grassroots lobbying campaign designed to raise awareness among legislators and government agencies about the Amateur Radio service.

ARRL President Jim Haynie, W5JBP, says there was careful deliberation before the board decided to launch the campaign.

"With all the things we have going on right now, such as BPL, our CC&R bill, our Spectrum Protection Act and even the restructuring program that we have it's time to raise our level of visibility," Haynie says.

Haynie says the ARRL board put the directors in charge of appointing volunteers to staff three positions in each division to work as Congressional Action chair, coordinator and assistant.

He says the chair would be someone who has had some experience in lobbying. A coordinator, with the blessing of section managers, would be selected for each state to work with the chair. And, he says, that coordinator would seek assistants to help spread the ARRL's message to congressmen and senators.

"This is a very orchestrated effort and I'm happy to see it happen," Haynie says. "It's something that's been needed to be done for a very, very long time. And it's a good thing, Mark. It really is. It's something we should have done years ago, actually."

Haynie says recent pronouncements by the FCC's chairman clearly pose a threat to the Amateur Radio service.

"I heard Michael Powell say at the NAB (National Association of Broadcasters) conference in Las Vegas this year that everything was on the table," Haynie says.

"All frequencies were on the table for various types of services. "So, Amateur Radio has got to get in there and make sure that it's voice is heard and its importance of the communities that they serve and the people that like to do volunteer work."

Haynie says the league will also ask members to get more active in contacting their representatives in the U.S. House and U.S. Senate to express their views or simply introduce them to the value of the Amateur Radio service in their communities.

"And I'm not asking the league members to do too much, actually, but sit down and write their representatives," Haynie says. "And you don't have to complain about anything. Just tell them about Amateur Radio. Tell them how much it's meant to you and your life and how it may have shaped it or changed it.

"I've said for years some of the finest people I ever met have been through ham radio. But there's many hams out there that have whole careers based on it. And this is too important not to bring the level of visibility to a higher plain."

In other board business, Haynie says there was considerable discussion of Broadband over Power Line internet access and the pending FCC action. Haynie says the board was encouraged that the Alliant Energy BPL trial in Cedar Rapids, Iowa was terminated early because of interference complaints.

He says that move sent a message to other electric utilities exploring BPL.

"It's several dozen utilities now that have looked at BPL and said that it's not something they want to get involved with," Haynie says. "And our message is not economic because they can figure that out for themselves. Our message is the fact that under Part 15, there are certain rules that have to be abided by and we want to make sure that they do that."

Haynie emphasizes the league's position on BPL is clear and consistent and can't be perceived as denying people access to technology.

"We're not against people having broadband access, we're really not," Haynie says. "It's the fact that the interference that this

particular technology would bring to the HF bands is going to be a real problem and we've got to hold people's feet to the fire when they say that they're going to mitigate interference. That goes from the White House all the way down."

Finally, Haynie says he is growing cautiously optimistic about the BPL fight and the impact the ARRL's position is having on the industry and some in government agencies.

"I think that our message is beginning to get out, and, like I say, we're not confrontational" Haynie says. "We're just trying to say look at the facts, look at the engineering studies, look at the NTIA studies and draw your own conclusions. If you've got engineers on your staff, they're quite clear."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

A more in-depth report on the actions of the ARRL Board will appear in an upcoming issue of QST Magazine. (ARNewsline (tm))

**

RADIO RULES: VANITY CALL SIGN FEEE GOING UP

The FCC regulatory fee to obtain an Amateur Radio vanity call sign will rise from $16.30 to $20.80 later this year. According to the ARRL Letter, the FCC announced the new fee in a Report and Order in MD Docket 04-73. Thats also known as the "Assessment and Collection of Regulatory Fees for Fiscal Year 2004" and the FCC says it anticipates 7800 applications for that time frame. The FCC expects revenue collected from the vanity call sign regulatory fees in Fiscal Year 2004 to rise by more than $2100. The Report and Order becomes effective 30 days after it's published in The Federal Register. (ARRL)

**

ENFORCEMENT: CBS SAYS IT WILL NOT ACCEPT SUPER BOWL INCIDENT FINE

CBS says that it will fight any fines leveled against its television stations over Janet Jackson's startling Super Bowl performance. This, according to a top executive with parent company Viacom Inc. on July 19th.

An FCC staff recommendation did not call for fining CBS affiliates that aired the Super Bowl halftime show but are not owned by Viacom. But CBS itself could face a fine of $550,000 or of $27,500 for each of its 20 owned and operated stations that asired the so called Janet Jackson wardrobe malfunction.

Now, in a recent talk before the Television Critics Association, Viacom co-president and co-chief operating officer Leslie Moonves criticiszed any fine as being grossly unfair. He said that CBS considers the idea of a fine as patently ridiculous and that the company will take the matter into court if such a penalty is imposed. (Published news reports)

**

ON THE AIR: SAN DIEGO'S 96.9 MHZ PIRATE REACTIVATES

According to a news bulletin from Chris Carmichael, San Diego's 96.9 MHz pirate is back on the air. No news on the location ofthe transmitter site. (CGC)

**

RADIO LAW: HAWAII'S GOVERNOR VETOES AMATEUR RADIO ANTENNA BILLS BUT OVERICDE MIGHT BE ATTEMPTED

The ARRL Letter reports that Hawaii Governor Linda Lingle has vetoed two Amateur Radio antenna bills. Both pieces of legislation would have provided limited opportunities for amateurs living under private deed covenants, conditions and restrictions to erect antennas.

HB 2773 would have opened the door for amateurs living in condominiums to make arrangements with the homeowners' association board to install an antenna without having to change the CC&Rs. HB 2774 would have granted similar rights to the relatively few amateurs who live under CC&Rs in agricultural-zoned property.

Lingle, a Republican, invoked the same reason for refusing to sign both bills into law. She said that the bills were objectionable because they amount to an inappropriate and unacceptable governmental intrusion into the contractual affairs of the property owners.

But it may not be over yet. According to word from former Westlink News Production Coordinator Bill Orenstein, KH6QX, there is a move afoot to overide the Lingle veto in the Hawaii State legislasture. Orenstein, who now lives in Hawaii could not say when the overide action might take place or if it had any chance of success. (ARRL with additional information by KH6QX)

**

HAM RADIO ON THE NET: HAMBLOG.COM

www.hamblog.com is a new weblog host exclusively for amateur radio operators.

What is a blog you ask? Simply, its a spot in cyberspace where people post their thoughts and ideas on just about any subject. Some blogs let you do just that while others like hamblog.com are targeted to a particular subject. In the case of hamblog.com its our hobby of

Amateur Radio.

Charles Brabham, N5PVL, who administers hamblog.com says that hams have a lot of information to pass on to each other but traditional information systems such as magazine articles or speaking engagements at fests have proven to be unsuitable for. He says that Weblogs are highly flexible and highly individualistic and they hope that hamblog.com will provide a wellspring of knowledge about Amateur Radio that would be impossible to access or distribute by traditional methods.

Oh yes. Charles says that the service is free of charge so go check it out. The URL is simply www.hamblog.com (Via e-mail)

**

HAM RADIO CONFERENCES: THE DCC IN IOWA IN SEPTEMBER

On the ham radio social scene, the 2004 joint TAPR and ARRL Digital Communications Conference will be held September 10th to the 12th. This, at the Airport Holiday Inn in Des Moines, Iowa.

As part of the program, confereence planners are now accepting papers for the published proceedings. Submission are due by August 10th and should be sent tyo Maty Weinberg, ARRL, 225 Main Street, Newington, Connecticut, 06111. You can also e-mail them to maty@arrl.org

And very important. You can even take part even if you cannot be there in person. Thats because you do not have to be present at the conference to have your paper included in the proceedings.

Again, thats the 2004 joint TAPR and ARRL Digital Communications Conference fropm September 10th to the 12th at the Airport Holiday Inn in Des Moines, Iowa. More information is on-line at www.tapr.org/dcc (VHF Reflector)

ARNEWSLINE™ SUPPORT FUND REPORT WITH N6TCQ

Ladies and gentlemen, once again with some thank-you's, here is Amateur Radio Newsline's Support Fund Administrator, Andy Jarema,

N6TCQ.

--

We'd like to take a moment to thank everyone who helped us during our June
campaign. We heard from Brian Boccardi, N2MPM of North Brunswick, NJ; Lloyd Smith, WA9NLA and the Peace River Radio Association of Port Charlotte, FL; Billy Bryant, Jr., of Harvey, LA; The Reading, PA Radio Club, W3BN; Eric Olena, WB3FPL of Mohnton, PA; monthly contributor Joseph Bartzi, Jr., KC8DKF of Columbus, OH; our friends at the Dayton Amateur Radio Association; Mark Otspaih, also from Dayton Ernest Clark in Greenwood, IN; and C. Mark Burlingame, KB9TVD of Northlake, IL

The boss said I only have about a minute, so we'll have to do the rest of the list next week. Thank you to everyone. A reminder that Newsline is a 501c 3 California non-profit corporation. Information on how to support us is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast.

I'm Andy Jarema, N6TCQ.

--

Thank you Andy. Now back to the news. (ARNewsline (tm) Support Fund)

**

RADIO SAFETY: CELLPHONE TAKES BULLET AIMED AT SUBSCRIBER

A South African merchant says he owes his life to the Nokia cellphone he was holding to his ear when he was ambushed by someone in a passing car. Andre Steyn felt the bullet penetrate his hand, only to be stopped by the phone before it could penetrate his head. The entire story is on-line at www.mobilemonday.net/mm/story.php?story_id=3653 (CGC)

**

RADIO ON THE ROAD: THE SHRINKING SYNDROME

If you are finding the size of your car and your mobile rig shrinking, you are not alone. According to Lee Cobb, W6TEE, writing in Worldradio Magazine, the actual size of automobiles has not changed much ion recent years, but the competition for space in front has. As a result, under dashboard mounting of gear is almost out of the question due to such amenities as consoles and such.

But fear not. Lee has some interesting notes on how to conquer the new car lack of space syndrome and ways her has found to get around the problem. You can read all about it on Lee's H-F Mobile column on
Page 31 of the August issue of Worldradio on newsstands right now.

(ARNewsline (tm))

**

HAM CONFERENCES: AMSAT-UK SPACE SYMPOSIUM

And AMSAT - UK is holding a Space Symposium at the University of Surrey from Friday the 30th of July to Sunday the 1st of August. On the Saturday there will be special beginners sessions run by Howard Long, G6LVB, aimed at those wishing to get into the fascinating world of amateur satellite communications. The RSGB GB4FUN van will be on site throughout the event. For booking information and full program details take your web browser to www.uk.amsat.org or contact Jim Heck by e-mail to g3wgm@amsat.org (AMSAT-UK)

**

WORLDBEAT: DXPL NOW ON WRMI

Turning to news from around the world, this item for hams and SWL's
who listens to the D-X Party Line show. Allan Graham, who hosts the DX Party Line has announced that the show will now be carried by WRMI each Sunday at 0300 U-T-C. That's 11 PM Eastern and 8 PM on the West Coast on Saturday here in the U-S-A. The frequency to listen on is 7.385 MHz.

WRMI is oned by the Florida based Radio Miami International and is heard throughout the Americas -- from Alaska to Tierra del Fuego -- in English, Spanish and other languages. The new schedule for the DX Party Line was slated to begin on July 24th. (ASWLC)

**

WORLDBEAT: SAQ NAMED WORLD HERIRTAGE STATION

SAQ, the Alexanderson alternator VLF transmitter at Grimeton in Sweden has been declared a World Heritage site by UNESCO. According to the RSGB News, the decision was made by the World Heritage Committee of UNESCO at a meeting near Shanghai in China on the 2nd of July.

S-A-Q continues to make occasional transmissions on 17.2 kHz on CW. The last one was on the 4th of July. (RSGB)

ON THE AIR: NEW PROPAGATION BEACONS IN CM88

Some new propagation beacons to report. K7XC reports over the VHF Reflector that as of 05:00 U-T-C on July 19th the KJ6KO 2 meter, 1 and 1/4 meter and 70 centimeter beacons in grid square CM88 are all clearly audible at his home in Fallon Nevada. Thats grid DM09.

The new beacons operate on 144.282 at 40 watts into a pair of loop antennas. The 1 an d 1/4 meter unit is on 222.014 with 25 watts into two stacked loops and the 70 centimeter beacon runs 100 watts into four stacked loops on 432.292 Mhz. KJ6KO says that he would apreciate any Q-S-N reports. Send them to his Callbook address. (VHF Reflector)

**

DX

In D-X. word that members of the United Kingdoms Wrexham and District Amateur Radio Society will be operating from the Isle of Man froom September 1st through the 8th. The exact operating location will be Scarlett Point which isd a decomisdsioned Coast Guard look out tower, approximately 1.5 miles South of Castletown, Isle of Man. Operation will be on all High Frequency Bands, plus 50Mhz, 70Mhz, and 144Mhz, at full UK Power. The team is expected to operate on at least 2 H-F Bands simultaneously, and will be running CW, SSB, RTTY, PSK and some SSTV. More is on the teams website at www.gb4iom.co.uk (GB2RS)

Also word that Andorra is now on 6 meters. According to ON4IQ, Andorra has released the 6 meter band to all resident amateurs. He reports that C31JI and C31HK are both already active on the band. (GB2RS)

**

THAT FINAL ITEM: SOMALIA GIVES HAM RADIO INCREASED POWER LIMITS

And finally this week, the ARRL Board Meeting was not the only place where things were ham radio changes were happening last week. Another was the nation of Somalia which has acted to grant its ham radio population a power increase to 3 kilowatts. Thats right. We said 3000 Watts and thats 3000 P-E-P for SSB and 3000 watts average for other modes. Somalia is also letting hams use of the 88 to 108 Mhz band for F-M and permitting Amateur Television broadcasts to be conducted on any unoccupied standard VHF or UHF television channel. WIA newscaster Graham Kemp, VK4BB, has more:

--

Yes the Ministry of Information, Telecommunication and Culture in Somalia has made these changes and more as part of action to implement the W-R-C 2003 accords.

And the Ministry has also made additional frequency allocations for amateur radio experimenters in Somalia. Radio Amateurs in that nation can operate on additional bands including Zero to 9 Kilohertz, from 70 to 90 Kilohertz and 130 to 190 Kilohertz. On Medium Wave frequencies include 495 to 526 Kilohertz, while on the High Frequencies the hams of Somalia get 5.060 to 5.450 MHz and 26.100 to 29.700 MHz excluding 27.995 the sliver band from to 27.999.

This Ministry is promoting Somalia as the best holiday and research destination for visiting radio amateurs. This, as a way of attracting skilled people to help the local Somali people become ham radio operators. Abdikariim Ali Sulatn in Puntand State Somalia confirmed again that Aussie Amateur Sam Voron, 6OA, will continue to conduct ham radio license qualifying courses and issue amateur radio licenses free of charge "in the name of this Ministry" until a national Somali Amateur Radio Society is formed.

And, oh yes. If you are planning to go there, a Somali Visitors Amateur Radio License is now issued to any class of overseas amateur radio license holder as a courtesy. It is free of charge and issued for life unless canceled by the Somali Government. Talk about an inducement to visit a far off land.

Reporting for the Amateur Radio Newsline, I'm Graham Kemp, VK4BB, for
the WIA News, in Brisbane, Australia.

--

According to a Somali spokesman, as of now, no other country provides radio amateurs with more frequencies or a higher transmitter power output. He added that Somalia welcomes visiting radio amateurs from throughout the world. (WIA News)

Since Clear Channel has not received any significant number of new station grants (maybe non... I am not sure), this is a moot point. Every station they have acquired has been via purchase or merger with the prior owner. There is no potential for government influence here.
>
> Don't be fooled into thinking that a company that was making a lot of
> money

They were not making that much money, reative to the enterprise billing, to the fines, and to the potential for license endangerment.

> The fact that Clear Channel is crying and complaining to the government
> now
> that they are doubly screwed now that Infinity is putting Stern back in

> should
> wake you up to what is really going on here.

They are not complaining to anyone. They have filed a countersuit against Stern and his agent over the contract. They seem to believe they should not have to pay the contracts since Stern's show subjected them to fines, endangered the licences and presented no guarantees of future performance.
>
>> Censorship would be the government telling a cable news channel that they

That, obviously had nothing to do with it. The issue related to indecency, not politics.

This means the stock is undervalued. That seems to be the opinion of
Morningstar, and several other investment services I use.

Your use of "low" is inaccurate. Clear Channel has the "best" PE ratio of
the stocks being discussed. Part of this is due to the fact that they have
low debt service (a lower debt to equity ratio than even General Electric,
for example) and are an ongoing enterprise dating back to 1975.
>

The PE has no attitude. Nor does it have anything subjective in it. The PE
is simple a math calculation.
>>

They were on medium markets. Miami being the largest, but being a big underperformer and low biller due to the high ethnicity. Second was San Diego, market 14 or 15, and one of a cluster of 9 or 10 stations. The rest were even less significant.

> They sure seem to be crying a lot about
> Stern coming back in those markets for a company that should
> not care. If not for the billings, why the tears at his
> return?

Crying? All they doing is suing to get out of a contract. They are not whining about Stern returning.
>
>>> Add to that a boycott of Clear Channel stations,
>>> products, and advertisers, and you have a more wide spread
>>> impact than just the 6 markets.
>>
>> There is no such boycott.

When a boycott exists in name only, it does not exist. No effect, nobody cares. I can put an online petition and post in alt.Howard.stern or whatever, but that does not make my ranting a real boycott. It is just whining by Stern addicts.

Hello,
I have just purchased an '04 Accord EX that has the stereo with XM installed. I have 3 free months as a trial, but what I would like to do is after the three months purchase the portable XM unit, since I would really like to be able to listen to XM radio inside my house. I was wondering if it was possible to use the factory XM antenna, that is already on the roof of the car, and connect that one to the portable XM unit. I really would like to avoid having two antennas on the roof of my car. Is this possible?

-Jay

> > > wire service is a NEWS REPORTER

Ummm...who read the story and in what context? Generally speaking one wouldn't comment on something unless the audience has an idea of what is being commented on. Therefore oftentimes the commentator would *read* the story, then comment. Any part of that too difficult for you to understand?

You seem fixated on having government decide what the *truth* is. This has been tried. Communist China comes to mind. Of course their version of the *truth* may have differed from other versions of it. The beauty of America is that we can listen and then decide for ourselves what we should believe. Call it a natural selection process. People who are gullible usually get what they deserve - it's not the job of government to protect them.

Perhaps you are trying to obtain power for yourself. Since you have proclaimed yourself as "Mr. Fact" and you seem to think you have a rare gift of seperating fact from fiction, then perhaps you are the smartest person in America. We could just let you decide what we hear and see on radio and television. That could lead to broadcasters bribing errrrrr..... encouraging you to allow them to broadcast. Hell - we'll just make you the Information King of the World. Everyone else is just too stupid for you.

>
> Wrong. Several PDs, on thier own, made lists of songs tht
> might be sensitive, especially if played near news reports
> or commentary about 9/11. It was an example of
> self-discipline, not censorship. No song was banned.

Of course, the PDs just happened to have the same list,
and Clear Channel just happened to be the only station
with PDs sharing such a list:
http://www.f---edcompany.com/extras/clearchannel_email.cfm
http://www.chartattack.com/damn/2001/09/1707.cfm
http://news.dmusic.com/article/6118
http://slate.msn.com/id/1008318/

And the torture camps in Iraq were just several soldiers
releasing tension on their own, even though Rumsfeld
approved it. Clear Channel has the advantage of not being as

closely watched as the White House, but blaming underlings is
the standard, accountability avoidance method in
corporations. It allows them to punish/fire/relocate/rehire
without being sued.

>> stopped playing Dixie Chicks after they criticized
>> Bush/Cheney,
>
> Actually, many non-Clear Channel stations did this before
> Clear Channel ones did. Nearly every country station in
> America reacted to listener outrage about the Maynes
> comments and yanked the songs. The first were owned by
> Cumulus, in fact.

Do you have a reference to support this?
http://www.metroactive.com/papers/metro/04.24.03/censorship-0317.html
http://iml.jou.ufl.edu/projects/Spring04/Hale/index2.html
http://www.detnews.com/2003/entertainment/0303/29/d01-121866.htm

Or is that a legend plucked from your extensive urban
library? Are we talking about first by a day or a
week?

Then the next question is, who was Cumulus owned by
at the time and what connections do they have, as
a bible-belt radio broadcaster second in size
to only, hmmm, Clear Channel?

>> and issued another banned song list after
>> the Superbowl indecency erectile disfunction.
>
> No such thing. Urban legend, like the other two.

Of course. Just call it an approved playlist and
leave off the songs.
http://www.metafilter.com/mefi/31758

Just like their zero tolerance policy toward
anything the FCC considers indecent.
http://www.cnn.com/2004/US/02/26/wbr.stern.suspended/

Whether Clear Channel is a shill for Bush or Bush
is a shill for Clear Channel, remember that, in the
background, they are holding hands.

> far, far too broad. How many times to you have to be told. Give it up.

Here's some more copied VERBATUM from FCC literature. Unfortunately,
I don't have the details as to where it's found in their literature.
Somewhere in Rules and Regulations:

From FCC literature:
The Communications Act prohibits the FCC from censoring broadcast
material, and
from making any regulation that would interfere with freedom of
speech. EXPRESSIONS OF VIEWS THAT DO NOT INVOLVE A CLEAR AND PRESENT
DANGER OF SERIOUS SUBSTANTIAL EVIL COME UNDER THE PROTECTION OF THE

CONSTITUTION, which guarantees freedom of speech and freedom of the press."

The above does not imply but INFERS (based on logic)the positive statement: "Expressions of views that DO present a clear and present danger of serious substantive evil DO NOT come under the protection of the Constitution!" In other words-lying which has the INTENT to do bodily harm or psychological harm to others- is against the law! Even, by chance, if a commentator's original injurous (to mental or physical health) statement was not made with an intent to injure his listeners- HIS LATER KNOWLEDGE that his statement has the potential to cause injury and his subsequent INTENT not to CORRECT his original statement- well, this matter of events certainly demonstrates that he has left the door open to serious injury or death on the part of his listeners and is open to government action against him.

Here's another example of YELLING "FIRE" (when no fire exists) in an auditorium (an auditorium of millions of listeners, each at home or work listening to their radio)

A national radio talk show host and news commentator told his listeners that the vapors of a widely used consumer product (a liquid) are safe to breath- however the product's federal MDSD (SAFETY DATA SHEET-written by toxicologists)- says that the vapors are poisonous and can cause liver or brain cell injury or even death. An investigation into who heard this fraudulent toxicology and ACTED UPON IT- will show that they suffered a grave health risk (if they aren't dead now). The reason why this host has not been sued yet for actual damages- brings up the distinct possibility that this fraudulent toxicology was no doubt, passed on from one person to another, so there is no clear paper trail linking any health damage or a death to its original source (the commentator) Also-any victim may now be dead, so he can't tell what he heard that caused his death!. (Some victims may be sick and don't know why!)This example of illegal radio broadcast fraud (false medical advice and toxicological lie)needs to be investigated by the FCC and the host needs to be ORDERED to correct his lie and to cease discussing any more medical matters before he injures or kills more people. This host has a documented history of spreading false medical claims on the radio. He is no different than a medical quack. Again- enough of these examples by a commentator ought to prompt some kind of inquiry by the FCC as to his INTENT.
If this example doesn't qualify as a "clear and present danger of serious substantial evil" I don't know what does. The overwhelming appearance of impropriety of this host's discussion of medical matters, not to mention his documented lies about science, lies about the environment, lies about consumer products, fabrication of news events,mis-quotes of people in the news and slander(I have recorded on tape)-demands an FCC investigation.
The talk show host/news commentator never corrected or apologized for this this toxicological lie.(there are many others) We can only infer that some sinister motive is at work-i.e.- he was PAID by the

manufacturer of that posonous product to lie about its health effects in order to promote sales! This activity is certainy a violation of Federal TRADE Commission law.
The FCC is fully aware of the details in this matter, but refuses to even investigate, let alone enforce, the broadcast law under its jurisdiction.
Hundreds of medical lies,consumer product lies, name calling, slander,mis-quotes of people in the news,news fabrications,general idiocy and FCC VIOLATIONS are now ON TAPE. I will play these tapes (1 hour long) FOR FREE to any group of 100 people or more- in high schools, universities, any formal or informal meeting, and radio or television stations (as a guest speaker with station host; caller phone-in format). The tapes are for educational purposes (to educate citizens about the decrepit state of American radio broadcasting today!) Along with the broadcast garbage, I present the facts.
This expose is a good venue for looking at the mis-information in broadcasting today, discussing facts, examining the credibility of broadcast commentators, discussing and exposing FCC law violations.

# 1843. Hot Tip: We can own our own "legal" FM station for pennies on the $$ (not spam)

Newsgroup: rec.radio.broadcasting
Date: 2004-07-24 04:16:25 UTC
From: a_watcher152@yahoo.com
Message-ID: <cdsnqp$akl$1@xuxa.iecc.com>
Source record: 4580

This is no joke, not hype, not advertising. I just did not know what to do when I found out what is happening. Around my town, most folks are brain dead to this opportunity (plus I am a compulsive Mad Broadcaster).

I need investors to be part owners in buying FM license(s). This year the Gov. is going to be auctioning off almost 300 FM licenses; some for pennies on the dollar. I am a licensed engineer, and know this stuff. Contact me before Aug. 15th if you want to own (with me) several or just one FM station yourself. Don't let the big bucks guys (like Clear Channel, Fisher, etc.) suck all these up.

I am stuck with having to mention it this way as I am just a person like you who knows of this great opportunity and I for one do not want to see it pass by; there may not be an opportunity like this for 20 years. Email me here: maccds152@excite.com

Really? Do stock prices have any attitude? Anything
subjective?

>They were on medium markets. Miami being the largest, but
>being a big underperformer and low biller due to the high
>ethnicity. Second was San Diego, market 14 or 15, and one of

>significant.

Yeah, like Orlando and Pittsburgh. Clear Channel owns 7
stations in Orlando, 6 in Pittsburgh. Can you handle the
numbers? Just simple math, right? Did I mention 7 in
Rochester, NY?

Markets like LA, NYC, and Chicago are massive, beyond large.
Less significant does not equal non-significant. Or do
you have some simple math to back that up?

>ranting a real boycott. It is just whining by Stern addicts.

You sound like a disgruntled former owner of a bankrupt Web radio station. Just because nothing you do on the Web has become real or affected anyone, you conclude that is the way it is for everyone. Poor logic on your part makes ranting.

Listen to the show. You will here real people calling in from all over the U.S. about their successes and failures in boycotting Clear Channel. Even if it was just me, and I am not even a regular listener, not listening to Clear Channel radio stations or buying tickets to events they promote or not buying products advertised on their billboards, that would still be a boycott. Just a tiny one.

Nothing on Usenet irritates me more than people who insist on morphing
to avoid killfiles, and since the major participant in this thread is
doing so, nothing more will be posted in this thread.

I am pretty forgiving, but morphing is a sure way to get your posts
roundfiled. Don't do it.

Have you ever lost a radio station license because of programming that the FCC found offensive? I wager not. Are you aware of the current rules and regs regarding license forfeit? First time? A whopper of a fine (which Howard will get hit with personally along with the stations).. and the second incident anytime during the renewal period? License goes Poof if the FCC feels that the offense was worthy of it. Since the average station is worth a huge pile of dead presidents, and the black mark would go against the corporate owners, that puts a whole lot of stations at risk.

After some of his stunts, I'm surprised Howard has any stations still affiliated. The license threat is real. Why do you think they dumped Bubba the Love Sponge? Possible license loss....

# 1850. Car Radio Question

Heck- all I've been doing is reading stuff from chemical and medical journals and textbooks.

If you think that the statements, "Styrofoam is bio-degradable" or "nicotene is not addictive" or "Dioxin is not a health hazard" are just someone's subjective opinion- fine! Most of us out here, (including chemists)consider the statements LIES or the opinions of an idiot.I am here just to expose all the liars and idiots who host radio talk shows today. I am simply dis-crediting them. If you're too lazy to open a textbook or a scientific journal and find out the facts for yourself- simply continue to accuse those who DO open those books- as communists who want to control you!

As a general rule almost any car radio will have better sensitivity and selectivity than the GE SuperRadio III (I own two), where reception within cars falls apart is instead what antenna is used and noise from the engine, car electronics and noise sources outside the vehicle. The SuperRadio is a pretty good radio for what it is, but most likely your lack of reception especially AM reception is caused by the antenna setup you have and noise rather than the radio.

I won't bother discussing the audio quality of AM radio sections, but you asked about sensitivity and selectivity rather than audio. Improve the antenna and get rid of all the noise you can in the vehicle.

# 1861. Re: Deciding XM or Sirius ? Here's a Review

I agree 100%. I would have been happy with Sirius, I'm sure. i dont like sports, so its oldies & comedy but mostly business & news and both companies excell in those areas. I hope BOTH companies do very well.....

There is no reason for AM & FM to exist with these two services. I didnt even know the continuous weather & traffic were provided when I bought the radios. My wife & I find the (XM) traffic we have to be so much more thorough- and accurate- than the 12 seconds the local FM stations give that utility for the satellite companies is more than local broadcast staions can ever hope.

I guess I was mislead on the Sirius 1 yr requirement if its not the case. I do think the lifetime subscriptions should be of the subscriber. though. When built into a car- you know that could be totalled tonite.

Some late 80's and early 90's Delco OEM units were pretty good. I had an amazing radio (including AM Stereo) in a '92 Eldorado. Unfortunately the car is gone now, replaced by a better vehicle with an inferior radio.

There is an excellent technical article in the July 2004 edition of "Radio Guide". It is on page 8, under the heading, "The Canadian View".
Since the author isn't employed by any of the major American broadcast companies, he's able to tell it like it is.

The best that I have found when I got a the car stero price guide that comes out every year is the high price sony have the best selective 8db. Any sony over $250 should be @ 8db sleective all the cheapers ones are about 9.3 to 9.8. I have a kenwood kdc 422 good radio good selectivaty and a 54" hifi car antenna got it from NAPA good setup pulls in those far away stations great.

That's a bit of a stretch.

I have both SIRIUS and XM in both the car and house. Neither one will replace terrestrial radio for local service. The traffic and weather services serve only 20 or so major markets. The closest maket covered for me is Boston, more than 100 miles away.

# 1883. Another talk show host uncorrected mis-statements of fact

Newsgroup: rec.radio.broadcasting
Date: 2004-07-27 19:51:42 UTC
From: misterfact@yahoo.com
Message-ID: <ce6boe$ale$1@xuxa.iecc.com>
Source record: 4523

Never ending mis-statements of fact and lies on radio talk shows. The talk show industry should be ashamed of itself!
From a national talk show host:

"Only 5% of greenhouse gases are man-made; the other 95% is the result of PHOTOSYNTHESIS in plants!"

fact: OXYGEN is given off during plant photosynthesis- not greenhouse gas (CO2)

(the host has received numerous corrections from around the country but continues to recite this error on a regular basis)

here we go again:

"We get 50% of our oil from Saudi Arabia!"

same host- one month later: "We get 8% of our oil from Saudi Arabia"

fact: according to the Congressional Research Report, the correct figure is 17%.

No, you're trying to use the power of government (FCC) to take away first amendment rights of talk show hosts. That is a far cry from "I am here just to expose all the liars..." You came into this forum flaunting your letter to the FCC with some sort of expectation that they should be some sort of truth police. You don't need to try and revise what you said here earlier. You came into a broadcaster's group and tried to tell them the FCC should penalize talkers you feel are liars. What kind of response did you really expect? Nobody needs you, or the FCC, to determine for them what the truth is.

Depends on whether the antenna is a one-lead or a two lead. I've
heard Blitzsafe has an adapter that connects both.

Best bet is just to get a Sky Fi or Roady2 for home use and put it on
the family plan. It is only $7/month more.

LOCAL SERVICE!!!???? Oh, yeah... like the Friday night local high school football games (NOT!!!). Of course, theres the full news staffs that are down at the PD every morning checking the overnight troubles (NOT!!!!). More local service is always available though... like the 24 hours of intensive RELEVANT news coverage for the audience, oh, wait... I forgot. The one "news rip & reader" goes home at 10AM and studies reading skills since there is no more news that day! But of course, theres always the local talk show hosts like Limbaugh, OReilly and Franken.....oops, NOT!!!!!!

But of course there is the local DJs on the music stations. Like Stern or the 2 clowns from Jacksonville.... or any of the others that Clear CHannel sends all over the country via their owned digital progamming computers!

Yeah, Right Rich. Get your head outta yer butt and admit it: You aint read a PSA about a church bake sale in 35 years!

If you live 100 miles vrom Boston and not toward hartford or Providence, junior, YOU DONT NEED THE TRAFFIC SERVICE! You need to open your eyes to make sure there is no deer running into your path.

Get over it: tv channels, cable & OTA are no more than libraries for TIVOs and OTA radio is listened to less each year by IPod fans & satellite SUBSCRIBERS- that is, youse guys is history. The sopranos will do you in.

By the way Rich, does either SYR or TPA mean anything to you?

From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <cea0ir$gl8$1@xuxa.iecc.com>
Source record: 4538

Wanted to buy:

AM radio station.

The "Radio Crazy" it is baaaakkkk!!!!

I want to buy a "Dog" (i.e. loser, miserable, "dark" etc)AM radio station cheap! Ideally would have seller financing with little or no money down or would consider TBA with an option to purchase.

Prefer full-time station(s) with real estate. Any market considered.

We don't mind if station is "dark" and/or losing money as long as the FCC license is intact and is not being challenged.

We do NOT want "pure" daytimers. At midnight the station must be authorized at least 50 watts.

I am a semi-retired broadcast engineer. Last job in radio (2001) was Chief Engineer for a 5 KW directional full-time AM in New York City. Am I "diplomat with portfolio" or what!!! LOL! Hi Hi! (At least am an arrogant SOB, eh?)

References:
a-My parole officer. Mr. Larson E. Rapp, c/o Zing Zing prison, Ossingstink, NY. Tel: 1-800-IMA-THUG.

b-Trade references: Recently purchased a one-way ticket to Rio on Brazilian Bandit Airways using all unmarked small bills. Don't worry, I won't leave until after I have stopped my check to you! (grin!)

The references are in jest. The desire for an AM is VERY real!

WABC has nothing to do with the New York Message Board. It's run by an itinerant dentist radio groupie.

It's my understanding that WABC's own mesage board was shut down a number of years ago. I shut down WOR's message board for the same reason. Too much racist, homophobic, right wing crud. I had more important things to do with my day.

> because of numerous complaints-not evidence);

Wrong. Payola has been investigated only a few times. The most recent case was when a record company turned itself in when a high exec learned the company was doing this. Prior to this, the incidents generally came out of tax evasion or some unrelated investigation. Listeners would have no idea this is happening.

There have nbeen fewer than a dozen convoictions in the last 45 years.

Source record: 4545

For those who may be interested, I have posted as a Web site all of the planning documentation for my serious micropower FCC Part 15 AM radio broadcast station. It is also a primer for those who may want to put something similar on the air.

It includes an equipment placement and inter-cabling diagram; several lists of equipment and parts, with their makes, models/part numbers, prices, and sources; cabling; audio routing; tests; and planned operation.

The main page is a narrative with links to specific pages. All are printer-friendly.

Please see:

http://members.aol.com/K5BY/MP_Radio/MP_Radio0.htm

Best wishes,
Bill in SE Texas

CANADIAN DIGITAL RADIO MARKETING EFFORT SHIFTS FOCUS
Is it a coincidence that after Clear Channel gives the U.S. IBOC technology conversion process a jump-start, the group marketing the Eureka-147 technology in Canada overhauls itself in order to better focus that rollout? Stations using the DAB technology in Canada tend to be clustered along the populated U.S. border areas.

Hi, We are setting an Internet Radio (Just House Music) up and we want
to get you as listeners...

If you want to listen you should have Winamp, you can get it from
http://download.nullsoft.com/winamp/client/winamp503_lite.exe

If you want to listen with CD Quality Audio and minimal bandwidth use,
you should have mp3PRO plugin for Winamp installed and activated, you
could get it from http://www.mp3prozone.com/assets/mp3PROAudioDecoder.exe
To activate just open Winamp, press control-p (Options-Preferences
Menu) and locate Plugins-Input, there you will see the THOMSON mp3PRO
Decoder... Dobleclick on it and check all boxes, press OK or Accept
and then Close... That's all and it's free!!!

To play this new house music station just click here
http://Radio.LaMerma.com.ve or visit our website at
http://www.LaMerma.com.ve

Any suggestion will be helpfull

# 1914. Amateur Radio Newsline™ Report 1407 July 30, 2004

Newsgroup: rec.radio.broadcasting
Date: 2004-07-31 18:00:42 UTC
From: radionews@aol.com
Message-ID: <cegmoa$r34$1@xuxa.iecc.com>
Source record: 4404

Amateur Radio Newsline=E2=84=A2 Report 1407 =C2=AD July 30, 2004

Amateur Radio Newsline report number 1407 with a release date of=20
Friday, July 30, 2004 to follow in 5-4-3-2-1. =20
=20
The following is a Q-S-T. The ham bands get clobbered by the sun and=20
some of the results are amazing. Find out the details on Amateur=20
Radio Newsline report number 1407 coming your way right now.

(Billboard Cart Here)=20
=20
**

ON THE AIR: GEOMAGNETIC STORM AND HAM RADIO

A huge geomagnetic storm has hit the Earth, wiping out a lot of High=20
Frequency communications. At the same time its making the VHF and=20
UHF bands a veritable D-X playground. Bill Pasternak, WA6ITF, has=20
more:

--

According to a propagation bulletin issued on July 25th by CQ=20
Magazine's Tomas Hood, NW7US, the estimated planetary K index reached=20
a level of 8, with the Bolder, Colorado K reading a level 7. =20
Translated into everyday talk, that's one heck of a solar storm and=20
it does odd things to radio communications. All you need do is turn=20
on a 6 or 2 meter CW or SSB radio to hear it for yourself.

Solar storms bring with them an increase in Aurora and Aurora based=20
communications. Reports over the VHF Reflector say that this one was=20
no exception. According to Dave Wenner, K3KEL, in Benton,=20
Pennsylvania, his 150 watts to a homebrew 9 element Quagi antenna=20
made it possible for him to make dozens of 144 Mhz contacts. These=20
ranged from Maine across to Missouri plus Nova Scotia, Quebec, and=20
Ontario Canada. Dave's posting said that he did not work any=20
stations to the South but that they were there. He says that he=20
heard K4QI in North Carolina's grid FM06 very strong toward the end=20
of the session.

Wenner's was typical of the reports posted to the VHF Reflector. =20
Many of them said that this was the best Aurora session heard in=20
years.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los=20
Angeles.

--

How long does a solar storm like this last? NW7US reports that as=20
Saturday, July 25th progressed, the geomagnetic field again became=20
highly active and reached storm levels. He says that it has=20
continued to get more intense, reaching very high storm levels. As=20
the week progressed more Aurora contacts were reported world -wide=20
with some on the 222 Mhz band and above. (NW7US via VHF Reflector)

**

PROPAGATION: IS THE SUN HARMING EARTH

Meantime the CGC Communicator cites an interesting propagation=20
report. One that says Greenland's ice cores indicate that the sun is=20
more active now than it has been at anytime in the past 1,000 years. =20

That report also says this has caused a warming trend here on Earth. =20
As a result of this and other solar observations the pseudo-science=20
doomsayers have been quick to jump on the gloom and doom bandwagon. =20
They are out there predicting dyer consequences for those of us=20
living here on the surface of our home planet Earth. But is any of=20
this based on reality? That's what RAIN's Hap Holly asked CQ's=20
Thomas Hood, NW7US:

--

Audio report only. Hear it in the MP3 version of this newscast=20
downloadable at http://www.arnewsline.org/quincy

--

Hood says that you should enjoy the radio talk about the phenomena=20
but not to take it seriously. (CGC, RAIN)

**

ON THE AIR: THOMAS HOOD ON RAIN

By the way, you can learn a lot more about radio propagation and the=20
effects of solar radiation on communications from Thomas Hood on this=20
weeks RAIN Report. Its available right now on-line at=20
www.rainreport.com or on the phone at 847-827-7246. You can read the=20
article referred to by the CGC Communicator at=20
http://news.bbc.co.uk/2/hi/science/nature/3869753.stm (CGC, RAIN)

**

VHF AND ABOVE: ARRL MULLS CVHF/UHF CONTEST RULES CHANGES

ARRL Director Tom Frenaye, K1KI, has also posted some interesting=20
information to the VHF Reflector. He says that says that the work=20
done by the VHF-UHF Contests/Awards Subcommittee has been=20
completed. That the written report and along with some in-person=20
additional comments were given during the ARRL Board's Program &=20
Services Committee meeting on July 15th. That's just before the ARRL=20

Board meeting that began on July 16th. =20

Frenaye says that the Program & Services Committee did not take=20
action on the report and will study it during the next several=20
weeks. In the mean time, the committee agreed with him that the=20
report should be posted to the VHF reflector public consumption. It=20
will also be sent to the Contest Advisory Committee for information=20
and possible comment.

What will happen from here? Frenaye says that the Program &=20
Services Committee will work with the Membership Services Department=20
in Newington to take the recommendations any further. He says that=20
some rules may changes and some may not. Except for possible=20
changes to the 2004 E-M-E contest, K1KI does not believe you'll see=20
any major contest VHF changes until 2005. He also notes that some=20
recommendations may have to wait until budget resources are made=20
available. The full ARRL Board does not normally get directly=20
involved in contest rules issues as contest rules are usually not=20
policy matters. (K1KI via the VHF Reflector)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline,=20
heard on bulletin stations around the world including the K8KZO=20
repeater serving Portage Michigan.

(5 sec pause here)

**

HAM RADIO IN SPACE: ECHO ON THE AIR

I'm Bruce Tennant, K6PZW, with some breaking news that hams worldwide=20
have been waiting to hear. This, as AMSAT announces that its new=20
Echo satellite, now renamed AO-51 will be turned on for general use=20
in FM repeat mode on July 30th at about 02:15 UTC. =20

Echo will be on for a trial period of about three weeks. During that=20
time command stations will be watching the power budget and adjusting=20
the UHF transmitter output as needed for management of the battery=20
supply. Initially, the transmitter will be running at about 1 watt=20
but if all goes well it will be slowly increased during the trial=20
period.

Echo's uplink is 145.920 MHz using FM voice with 67 Hz PL tone=20
(CTCSS) required. The downlink is on 435.300 Mhz, also FM voice. =20
And like many terrestrial repeaters the downlink transmitter will=20
only come on when it hears an uplink signal with a 67 Hz PL tone for=20
about 1 second. After the uplink signals drop away the downlink=20
transmitter stays on for 10 seconds. After that, the downlink=20
signal goes away. You might say that the operation is just like a=20
terrestrial FM repeater with a 1 second kerchunk filter and a 10=20

second hang time. The only difference is that this one is circleing=20
the Earth in space.

Norm. (AMSAT)

RESCUE RADIO: UK FIRE EVACUATION BRINGS OUT HAM RADIO

RAYNET, the United Kingdoms version of RACES was recently called out=20
during a very hazardous materials fire. Jeramy Boot, G4NJH, has the=20
details:

--

On Monday the 5th of July at 19.55 BST Lancashire Emergency Planning=20
called-out Rossendale Raynet to attend a Rest Centre in Colne. A=20
fire at a building that contained an acetylene cylinder meant that=20
local residents had to be evacuated.

About 40 people went to the Rest Centre but the majority were able to=20
find accommodation for the night with friends or relatives. Social=20
Services arranged accommodation for the remainder. Rossendale Raynet=20
was stood down at 22.08 when the Rest Centre closed for the night.

Im G4NJH in Nottingham.

--

There were no injuries reported and the ham radio system worked=20
flawlessly. (GB2RS)

**

ENFORCEMENT: FCC INVESTIGATING 1999 EXAM SESSIONS

The FCC has ordered thirty-seven hams to sit for retests. This, as=20
part of an ongoing investigation of ham radio examination sessions=20
held in Yucaipa, California, back in 1999.

The tests under government scrutiny were administered by a W5YI exam=20
team. The exact test dates involved are those held on February 27th,=20
March 27th, April 24th, May 22nd, June 26th, and July 31st of 1999. =20

This is one of the largest retest orders issued since the all=20
volunteer testing program got underway in the early 1980's. (FCC)

**

ENFORCEMENT: HAM SURRENDERS LICENSE

A now former ham involved in a licensing investigation has turned in=20
his ticket to the FCC. The Agency's Daryl Duckworth, NN0W, explains:

--

Frank C. Richards of Moers, New York, submitted his license KG2IJ for=20
cancellation. In November of 1995 he had requested that the call=20
sign KB4VU be changed to the next availlable and that the address be=20
changed to Plattsburg, New York.

--

The FCC says that the call KB4VU actually belongs to one Frank C.=20
Richards of Ft,. Meyers, Florida. It says that this Richards has=20
never lived in New York and never requested that his callsign or=20
address be changed. =20

After an investigation that lasted almost five months the New York=20
Richards surrendered his ticket to the FCC on June 23rd. The FCC=20
acknowledged receipt on July 6th noting that the Wireless=20
Telecommunications Bureau has canceled that license and no further=20
enforcement action is contemplated at this time. (FCC, RAIN)

**

ENFORCEMENT: $11,000 FINE AFFIRMED AGAINST CALIFORNIA HAM

The FCC has affirmed an $11,000 fine issued to a California ham. =20
One whom the agency says caused deliberate interference to repeaters=20
and then refused to accept several certified letters from the=20
Commission.

The target of the now affirmed fine is Daniel Granda, KA6VHC, of=20
Whittier California. As previously reported, back on March 31st the=20
District Director of the Commission's Los Angeles Field Office issued=20
a Notice of Apparent Liability for Forfeiture alleging that Granda=20
deliberately interfered with two different repeaters. It said that=20
when FCC notices were sent by Certified Mail, they were returned as=20
unclaimed. But the FCC says that copies sent by regular first-class=20
mail were not returned by the post office.=20

The fine is $7,000 for the alleged interference and $4,000 for not=20
responding to FCC notices. Granda was given the usual 30 days to pay=20
or to file an appeal. (FCC)

**

HAMVENTION: ARRL NATIONAL AND HAMVENTION COMBINE FOR 2005=20

Turning to the ham radio social scene, word that the ARRL has=20
accepted an invitation from planners of Hamvention 2005 to bring the=20
society's national convention back to Dayton. =20

According to General Chairman Gary Des Combes, N8EMO, ARRL Great=20
Lakes Director Jim Weaver, K8JE, called shortly after the recent=20
Board of Director's meeting. Weaver told Des Combes the League had=20
accepted the invitation to hold the next ARRL National Convention at=20
the 2005 Dayton Hamvention. =20

The combined show will take place next May 20th to the 22nd at its=20
longtime home. That of coarse is the Hara Arena in suburban Dayton. =20
(Hamvention=C2=A9)

**

CONVENTIONS: K7UGA ON THE AIR FROM ARRL SW DIV CON=20

And the call sign of the late Barry M. Goldwater will soon be heard=20
again. This, as special events station K7UGA takes to the air from=20
the Southwestern Division Convention in Phoenix, Arizona from August=20
27th to the 29th.=20

This will not only be a chance for convention attendees to operate=20
Goldwater's original Collins S-Line equipment but also to take part=20
in an oral history project about Senator Goldwater that will begin=20
recording at the show. Also, Goldwater impersonator Ben Tyler will=20
attend the convention on Saturday afternoon to present his=20
Goldwater "Autobiography".

Again. it all takes place August 27th to the 29th in Phoenix,=20
Arizona. We will see you there. (SW Division Communicator)

ARNEWSLINE=E2=84=A2 SUPPORT FUND REPORT WITH N6TCQ

Ladies and gentlemen, once again here is Amateur Radio Newsline's=20
Support Fund Administrator, Andy Jarema, N6TCQ.

--

Continuing with our thank-you for June, we heard from Tim, N9TO and=20
Carol Toman, WD9CNW of Westmont, IL; Ted Tsucalas, W0RMJ of=20
Littleton, CO; Turning to CA, Leo Halog, KR6EG of San Francisco; Doug=20
Cannon of Livermore; Monthly contributor William Walters, WA2IBM, of=20
San Jose; monthly contributor Scott Hensley of the Area=20
Communications Team, also in San Jose; Art Protas, KG6AY of West=20
Covina; John Rice, KE6YFV of San Pedro and the Rio Hondo ARC of=20
Whittier.

Thank you to everyone, and we promise to do our best to continue to=20
earn your care and support.=20

A reminder that Newsline is a 501(c)(3) and California non-profit=20
corporation. FCC regulations prohibit us from telling you exactly how=20
to support us, but that information is on our website at=20
www.arnewsline.org. That address will be repeated at the end of the=20
newscast.=20

I'm Andy Jarema, N6TCQ.

--

Thank you Andy. (ARNewsline=E2=84=A2 Support Fund)

**

CHANGING OF THE GUARD: JOHN KRAUS, W8JK - SK

Some sad news to report. Word that noted astronomer and antenna=20
designer John Kraus, W8JK, has become a Silent Key. According to=20
reports from the ARRL and CQ Magazine, Kraus died on July 18 at age=20
94. =20

John Krasus was a member of the inaugural "class" of the CQ Amateur=20
Radio Hall of Fame, a world-renowned radio astronomer and the father=20
of the "Big Ear" radio telescope at Ohio State University. In the=20
world of Amateur Radio he was perhaps best known as an antenna=20
designer. His designs include the famous W8JK bi-directional wire=20
beam as well as the helix and corner reflector antennas often used at=20
UHF frequencies. (ARRL, CQ)

**

KAHN STILL TRYING TO TEST CAM-D

Broadcast entrepreneur Leonard Kahn opposes the AM HD Radio IBOC=20
system and has long promoted his Cam-D system as an alternative. In=20
his latest filing with the FCC for the IBOC proceeding, Kahn reveals=20
he tested his Cam-D system on Nebraska's 50 kilowatt KRVN at 880=20
kHz. However, he told Radio World Online that, some employees found=20
the sound unacceptable and the tests were discontinued. For more on=20
this story, see http://www.rwonline.com/dailynews/one.php?id=3D5511 =20

HAM RADIO IN SPACE: NEW KENWOOD ISS RADIO PROVES OUT FINE

The Amateur Radio on the International Space Station USA team has =20
successfully completed a comprehensive checkout pass of the new=20
Kenwood D700 radio system with Astronaut Mike Finke, KE5AIT. =20
Utilizing ground stations in Greenbelt, Maryland, Orlando, Florida=20
and Houston, Texas and linking team members in Kansas, Colorado,=20
Maryland, Florida and Texas, the ARISS USA team performed voice and=20
packet radio uplink tests to fully validate the Kenwood D700 system=20
for future school group operations.

During the East Coast pass, the ARISS team were able to perform=20
signal strength measurements and voice quality checks on 2 meters and=20
70 centimeters using the Kenwood D700 radio and the ARISS-built W A=20
One antenna system. Mike Finke provided the on-board feedback to the=20
team to help them understand how the=20
radio sounds on-orbit. Finke said that the signals from the 70=20
centimeter uplink signals were especially loud. (ARISS)

**

WORLDBEAT - CANADA: RESTRUCTURING ON ITS WAY

Back on Earth, Canada appears ready to restructure its Amateur Radio=20
service and work is well underway. =20

Following extensive discussions with Industry Canada, on July 23rd,=20
Radio Amateurs of Canada formally submitted its Proposal on Morse=20
Code and Related Matters to that regulatory agency. According to an=20
Radio Amateurs of Canada press release, little changed from the draft=20
proposal that was posted on the society's web site back in 2003. =20

Radio Amateurs of Canada says that it is now up to Industry Canada to=20
respond to the proposal. The current version is on line in both=20
English and French at www.rac.ca (RAC)

**

WORLDBEAT - MEXICO: ALL N.A. ADOPTS U.S. HDTV STANDARD

Mexico has formally adopted the U.S. ATSC Digital Television Standard=20
based on 8 VSB technology. This, for terrestrial broadcasting in=20
that nation. =20

Canada adopted the same standard in 1997. The decision by Mexico to=20
go along with the U-S and Canada means that ATSC is now the North=20
American Digital Television standard. ATSC was also adopted by South=20
Korea in November of 1997 and Argentina in October of 1998. More is=20
on the web at =20
http://www.atsc.org/news_information/press/2004/PR_Mexico_7-7-4.pdf =20
(CGC)

**

DX

In D-X, word that husband and wife team EA3BT and EA3WL will be=20
active from the Gambia through the 4th of August. They plan to=20
operate as C56BT and C56WL on 40 to 6 meters SSB. QSL as directed on=20
the air.

And Steve Burrows, M5BXB, will be on from the Czech republic as OK8XB=20
until the 6th of August. The OK8 prefix is quite rare, and Steve will=20
be attempting to make at least 1,000 QSOs on the HF, 6 meters and on=20
2 meter's from a portable location on Lysa Hora. Thats site is 1,324=20
metres above sea level in grid square JN99FN.

**

THAT FINAL ITEM: THE PHYSICS OF M&M'S

And finally this week the story of how a researcher with a sweet=20
tooth has changed science. Amateur Radio Newsline Henry Feinberg,=20
K2SSQ, has the rest of the story:

--

Princeton physicist Paul Chaikin's passion for M&M candies was so=20
well known that his students played a sweet practical joke on him. =20
The left a 55 gallon drum of the candies in his office. Little did=20
they know that their prank would lead to a physics breakthrough.=20
=20
The journal Science says that the barrel full of the oblate little=20
candies made Chaikin think about how well they packed in. A series=20
of studies have shown they pack more tightly than perfect spheres. =20
This is something that surprises many physicists and Chaikin=20
himself. So Chaikin and his colleague, chemist Salvatore Torquato,=20
used the candies to investigate the physical and mathematical=20
principles involved when particles are poured randomly into a vessel.=20
=20
The report in Science says they found that oblate spheroids like=20
plain M&Ms pack surprisingly more densely than regular spheres when=20
poured randomly and shaken. That spheres occupy about 64 percent of=20
the space in a container. M&Ms manage to pack in at a density of=20
about 68 percent.=20

But one of the researchers had a more philosophical view of the=20
experiment. Salvatore Torquato said that to him it is remarkable=20
that you an take this simple system with common candies and probe one=20
of the deepest problems in condensed matter physics.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, not to far=20
from Princeton, New Jersey.

--
=20
According to news reports, Mars Inc., which makes M&Ms, did not help=20
sponsor the research although it donated 125 pounds of M&Ms to the=20
two scientists. (Journal of Science, Science Online)

# 1915. US to roll out terrestrial digital

Newsgroup: rec.radio.broadcasting
Date: 2004-08-02 16:49:49 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <celrbd$4if$1@xuxa.iecc.com>
Source record: 4406
Cross-posted to: alt.radio.digital,rec.radio.broadcasting

28 July 2004

Clear Channel are leading American radio and speeding up the industry's adoption of digital technology and has agreed a deal to make 1,000 of its stations digital. The broadcaster will use the iBiquity, in-band HD system, developed by iBiquity Digital Corporation, a company in which Clear Channel has a small interest. By 2007 San Antonion-based Clear Channel expects to convert 95 per cent of its 1,200 AM and FM stations to digital in its top 100 markets, which include the Baltimore-Washington area, as well as New York and Cincinnati. Initially the conversion will cost about £70,000 a station, but the price is expected to decrease as the R & D costs are reclaimed.

# 1918. DJ's Book Reveals Inside World of Radio

Newsgroup: rec.radio.broadcasting
Date: 2004-08-02 16:49:51 UTC
From: Corey Deitz <coreydeitz@comcast.net>
Message-ID: <celrbf$4im$1@xuxa.iecc.com>
Source record: 4407

For Release: Immediately
Contact: Corey Deitz
Email: corey@thecashcage.com

DJ's Book Reveals Inside World of Radio

The Radio industry will no longer have any "private parts" once readers finish "The Cash Cage", a new book by Corey Deitz.

Deitz, a 25-year Radio veteran, dishes the dirt on an army of wanderers who spin tunes, give the time and temp, take the requests and when the pressure is on are easily discarded by a cutthroat business that disguises itself as your favorite song.

"I wrote this book for both listeners and people in Radio," says Deitz, "because in this business the real show starts when the mike turns OFF."

Corey Deitz has hosted radio shows in Chicago, Cleveland, Columbus, Richmond, Virginia Beach, St. Louis, Toledo, Little Rock and other cities. He has experienced all facets of the Radio business from top to bottom.

"The Cash Cage" reveals it all: the deejays, the egos, the backstabbing, the celebrities, the glory of winning and the dejection of failure.

>From practically living in poverty in Pennsylvania to being fired and given a year's severance pay in Chicago, Deitz's casual and humorous style ushers the reader behind the scenes of a business where logical decisions are sometimes "missing in action".

"The Cash Cage" is a captivating trip through an exciting medium held together by an odd lot of gypsies who move from city-to-city in an incessant struggle for ratings, income, and acceptance.

Deitz's story is also a "how to" manual on confronting life head-on. Based on his own accumulation of hard-knock knowledge, he offers a good dose of street smarts, wisdom, and philosophy from which anyone can benefit.

Apparently no one sits up and takes notice unless Clear Channel does something.

Clear Channel is far from the first US broadcaster to commit to digital.
Entercom, Cumulus, Infinity, Greater Media and others have been on top of this
for almost a year now.

## 1923. Satellite radio captures ears of millions

Newsgroup: rec.radio.broadcasting
Date: 2004-08-03 20:57:15 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <ceou7b$99d$1@xuxa.iecc.com>
Source record: 4413

By Kathleen Kingsbury
CNN
Tuesday, August 3, 2004

When Mike Alden first tuned in to satellite radio, he simply could not turn it off.

"I was sleeping less than four hours a night," said Alden, who subscribed to XM Satellite Radio in June 2003. "I'd gotten so sick of FM radio's cookie-cutter programming. XM is a music-lover's paradise."

# 1924. internet radio without computer...

Newsgroup: rec.radio.broadcasting
Date: 2004-08-03 20:57:15 UTC
From: edcqaz@wp.pl
Message-ID: <ceou7b$98o$1@xuxa.iecc.com>
Source record: 4417
Cross-posted to: rec.radio.shortwave,rec.radio.broadcasting

Hello

Recently I've been looking for a solution to listening internet radio
stations (and other radio station which broadcast in internet )
without computer or eventually with turned on any server but without
siiting next to a screen to changed a channel.

I've heard about Philips Streamium product but it offers limited
quantity if channels.
There's other Sony product which enables connecting with computer
without cable and listening to the music in any place but I suppose it
still needs to changed channels in the computer.

The best solution I've found was dLAN Audio made by Devolo.
It's wireless LAN which uses electric net and sockets in the house in
transferring.
It's possible to listen to any radio station from the Internet without
computer.
Unfortunately there's not possibility to assign more than 4 channels
so if I want to change to other radio station I've to change settings
using computer.

Kuba

# 1925. Re: Deciding XM or Sirius ? Here's a Review

Newsgroup: rec.radio.broadcasting
Date: 2004-08-03 20:57:16 UTC
From: Dave Barnett <davencinNO@SPAMtdl.com>
Message-ID: <ceou7c$99n$1@xuxa.iecc.com>
Source record: 4414

I haven't heard anyone talk about reception quality yet. I had a friend who got Sirius at about the same time I got XM. We took a drive from the San Francisco Bay Area to Lake Tahoe. His Sirius radio suffered far more dropouts (mostly in forested areas and driving through extensive underpass complexes) than the XM. I also thought that the XM had a slight (VERY slight) edge in audio quality. Both sound like a well-coded MP3 to me. Certainly not the quality of an uncompressed CD - the highs have that weird digital sound to them. But both are listenable.

Anyone else have any experiences they would like to relate RE: reception?

Dave B.

# 1926. Re: My Part 15 AM Station (Under Construction)

Thank you, Dan. It sounds like you've been heard many places. <G>

For Part 15 broadcasting, check out...

The forums at:

http://www.part15.us

Also check out:

http://www.lpam.net

(The forum at the above is broken, but can't get fixed unti lthe web host
finishes his move cross country.)

Also check:

http://www.lpam.8m.net

And the Bulletin Board at:

http://www.ramseykits.com

All of the above are just for starters. <G>

Best wishes,
Bill in SE Texas

# 1927. US Navy soliciting transmitters for Commando Solo

Newsgroup: rec.radio.broadcasting
Date: 2004-08-03 20:57:18 UTC
From: Mike Terry <miketerry73@btinternet.com>

The US Naval Air Systems Command Aircraft Division (NAVAIR AD), Patuxent River MD 4.5 Department, has a cometitive requirement to acquire transmitter components for Modular Commando Solo (MCS) Program. These transmitters are to employ Commercial Off-The-Shelf (COTS) / Government Off-The-Shelf (GOTS) technologies only and will ultimately be configured on pallets for a Roll-On Roll-Off (RORO) capability for EC130J's.

By Don Eriksson

August 04, 2004
Pepperell, MA

During the Cold War, one beacon of freedom throughout the Middle East and eastern Europe was the Voice of America (VOA), which brought newscasts and special programming to people behind the Iron Curtain and in the Middle East.

Between 1952 and 1964, a key link in the broadcast chain was the U.S. Coast Guard Cutter Courier, a vessel equipped with extremely high-power broadcast equipment (for its time) that acted as a repeater station from its berth in Rhodes, Greece.

For two years, from 1958 to 1959, David Newell of 42 Mill St., known locally for the bass boat repair business he ran after his retirement as an infrared research and development specialist for the Air Force, was an electronic technician on the Courier.

Nashoba Publishing / John Love, David Newell of Mill Street, Pepperell, shows a photo of the U.S. Coast Guard Cutter Courier, a floating repeater station for Voice of America radio and short-wave broadcasts during the early days of the Cold War, on which he spent two year' duty.

For several years, Newell has organized reunions for crew members of the ship. Lately, he has been drawn into a battle to keep VOA funding and programming alive, prompted by the efforts of a former shipmate, Fred Haney, to restore broadcasting hours, funding and creditable programming.

According to Haney, U.S. international broadcasting is seriously threatened at a time when a strong, substantive voice is important. Broadcasts to the Middle East and Islamic people have increased, but pop music networks have replaced comprehensive news reporting and analysis.

Language broadcasts to most of Central Europe have been abolished, and during critical hours, the VOA doesn't broadcast in English, he said. The longtime VOA director of Central News, Andre DeNesnera, was relieved of duties this month, Haney wrote to Newell.

Haney blames actions taken by the Broadcasting Board of Governors, the oversight entity for U.S. international broadcasting, for limiting the scope of the VOA since the 9/11 terrorist attacks. Some 450 current VOA employees are circulating a petition through Washington, D.C., demanding Congress investigate the Broadcasting Board of Governors' actions.

Newell said he is helping Haney contact the older VOA crew members.

Newell's tour of duty on the Courier is an interesting and little-known piece of American history.

The 338-foot, 5,800-ton Courier was launched as a cargo ship for the Maritime Commission in 1945. In 1950, the Truman administration became interested in a sea-going radio relay station, and so the Courier was converted in 1951.

The ship was fitted with three locomotive-type diesel engines to drive three 500-kilowatt A/C generators, a 150-kilowatt medium wave transmitter, two 35-kilowatt short wave transmitters, and its own studio.

"When we were broadcasting, there was so much RF [radio frequency] it would arc through the wires of ships that came too close, often starting fires," Newell said. "We could hold up a florescent tube and walk off the ship with it lit up. It freaked the Greeks out."

At first, a 69-by-33-foot barrage balloon was used to fly broadcast wire high over the ship. Newell said that stopped after two broke away, one of them later returned from Turkey 20 miles away, the missing pieces of material shaped as shoe soles.

He also told a story about playing with Soviet jammers over 10 to 12 broadcast feeds from the ship, and one about an emergency trip to a Turkish cove to avoid a Soviet submarine that was allegedly sent to sink the Courier.

"They had jammers on all frequencies and tried to pick up weaker feeds due to medium frequency skips," Newell explained. Skips are signals that transmit into the atmosphere, but come down somewhere else because of ionization in atmospheric layers, he said.

"We were not allowed to broadcast in open water because that is illegal," Newell said.

"The VOA archives in Washington have a stack of mail from people in Communist Europe [who were affected by the broadcasts]," he said. "At the 1992 Williamsburg reunion, we got a unit citation for our efforts in bringing down the Berlin Wall."

The ship used to broadcast in 16 languages to the Middle East and former Communist block 10 hours a day. The VOA still operates, broadcasting in 44 languages.

When the Courier was decommissioned, her equipment was set up on a hillside on Rhodes. Newell spent a year repairing radio and radar stations up and down the East Coast before leaving the Coast Guard. "It was great duty," he said.

He went to work at the Lowell Technical Research Foundation, building electronic equipment before signing to work for the Air Force. There, he worked with infrared sensing equipment.

He said he once tracked heat signals from a cruise missile from a KC-135 jet which flew beside the missile for 1,000 miles from the Pacific, over California and into Utah. During Operation Desert Storm in the early 1990s, he flew sensing equipment from Hanscom Air Force Base to Iraq to see if anthrax could be detected.
"We knew Saddam had anthrax and had bought 600 disseminators in Italy," Newell said.

Now retired, Newell works with Haney and others on the VOA project and said he has heard the petition has caused quite a stir on Capitol Hill.
In an e-mail to Haney, Newell wrote, "Without the Voice, we have little input in broadcasts to the Islamics in the Near East and other countries in Africa and Far East. This, in my opinion, would be a travesty, as without the VOA, the only broadcasts to the poorer inhabitants of these countries would be the Taliban and the rest of the radical rabble.

"Many of our now Islamic supporters listened to the broadcasts of my ship, as we spent many hours of broadcast time with Islamic languages," Newell added.

# 1929. Re: Deciding XM or Sirius ? Here's a Review

Sirius (which is the only service I'm familiar with, as I subscribe (and I own stock..a very small stake...in the company, in the spirit of full disclosure) seems to devote more bandwidth to those services which would benefit by it...the classical/symphony/jazz channels sound as good, if not better, than FM and compare favorably to CDs. The voice-based channels (NPR, TWC, ESPN, etc) aren't as good, as well as some of the rock music channels, and compare reasonably well to 16-32kbps RealPlayer streams.

Keep in mind that the codecs used for these (because of frequent dropouts, under viaducts and trees, etc.) are dropout-resistant. I don't know how it's done, but apparently the receiver buffers some five seconds of audio, and has a passing shot of filling in a dropout within that time. Trees, as Rich Wood has noted, are a problem in the summer in those areas too far out from the metro. Sirius seems to have installed terrestrial repeaters (I know that I got Sirius halfway through the Squirrel Hill tunnels in Pittsburgh...a 6000 ft tube...which can only be explained this way) so coverage in cities where this has happened may be better.

Sirius does claim to have better audio than XM, which may only be the case on those programs already noted....they really are QUITE good. But beyond that, the decision should, probably more than anything else, be based on what programs are available. Since Sirius has NPR Now and NPR Talk, PRI, BBC World and WRN (and soon, CBC English and French radio as well as two Canadian music channels) the decision, for me, was a no-contest. Not that I use it, but Sirius also has their music channels streamed on the 'net. I thought they sounded quite good (as good as any other stream, anyway) but others here can't stand it. Truth be told, one of the reasons why I don't listen to the music channels on the 'net, is because I can't stand the way they sound, either, but I've often been called a golden-eared bastard. Your results may vary.

Dear Group:

I am associate producing a documentary on the life and career of Irving
Thalberg (Head of MGM Production in the 30's) for Turner Classic Movies. The film will air in Feb. of 2005.

We are looking for radio announcements of Thalberg's death. On September 14,15, or 16 1936. KFI-KECA had a 15-minute program narrated by John Hallern commemorating Thalberg's life.

Thalberg died on September 14 and the funeral was held on the16th 1936. Also, KEHE-Hearst Radio was the first to broadcast his death and KNX announced as well.Can you direct me towards anyone who might have any of these?

Please e-mail me if you have anything.

Thank you,
Michelle Sullivan

There was a product called a "Kerbango" that never made it to market.
The company was bought by 3Com and then 3Com dropped all of their
consumer products around 2001 before it saw the light of day.

It was an internet radio, it had an ethernet port, tuning dial and a
volume control but otherwise looked like a real radio.

Someone announced the "first internet radio" on this news group a while
ago, it was a $1000+ hifi unit.

Geoff.

I just got Sirius a week ago, with the antenna properly located on the roof of my car. I too have noticed occasional drop-outs under tree cover here in eastern PA. It is a little surprising, but won't really be a problem on the highway. I will be going to the Dakotas, Montana and Wyoming next month, and the high-latitude satellites should help coverage a lot in deep valleys as compared to XM. The sound on the classical stations is reasonably good - I have checked it with headphones - and most problems relate to inputting it into the car radio. But on the talk and rock stations, the digital artifacts are apparent. But I could not care less on those.

Amateur Radio Newsline™ Report 1408 August 6, 2004

**

A WORD FROM THE ARNEWSLINE (tm) SUPPORT FUND

The following is not necessarilly for retransmission. I guess you already know that if you are hearing my voice on a closed-circuit advisory it means that Newsline is again facing a financial crisis. Well, you're right.

The solution to the problem really lies with you. Our world-wide all volunteer staff produces these newscasts for you. The all volunteer Young Ham of the Year Committee labors tirelessly each year to select a youngster to receive the Award. Joe Eisenberg, K0NEB, oversees the Newsline sponsored Roy Neal, K6DUE, Amateur Radio Mentoring Project database, doing so at no cost. The list goes on and on.

I too am a volunteer, but I have to be the realist. I'm the accountant who has to look at the bottom line and when it turns red, I have to say -- hold on -- there is no more money to continue. And that's about where we are right now.

So, here's the bottom line. If you want the newscasts to continue. If you want the mentoring program to continue and the Young Ham of the Year Award to continue, we need you to show it now -- right now -- through your financial support of Amateur Radio Newsline.

Remember that Amateur Radio Newsline is a federally chartered 501(C)(3) and California state not-for-profit corporation. This makes your donations tax deductible, whether you're an individual or a club. The address to send them to is the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California 91066. If you missed the address don't worry. It will be repeated at the end of this week's report.

For now I thank you for listening, for responding and offer you this weeks newscast which follows immediately. (ARNewsline Support Fund)

**

Amateur Radio Newsline report number 1408 with a release date of Friday, August 6th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The B-P-L battelground expands in California and Texas while a U-K repeater is ordered off the air. Find out the details on Amateur Radio Newsline report number 1408 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIGHT: SAN DIEGO CA. UTILITY REPORTEDLY CONSIDERING BPL

San Diego California could be the next B-P-L battleground. This, as an informed source tells the CGC Communicator broadcast industry newsletter that San Diego Gas & Electric is considering the deployment of Broadband over Power Lines in its service area. Bill Pasternak, WA6ITF, is here with the specifics:

--

According to Gonsett's CGC newsletter, an informed source has told him that San Diego Gas & Electric's communication systems planners met recently and are seriously considering endorsing and sponsoring B-P-L on the unility's power distribution system. The newsletter also says that San Diego Gas & Electric is considering entertaining proposals to partner with vendors for one or more field demonstrations of B-P-L technology.

CGC says that these plans should be of concern to all users of the High Frequeny and low band VHF spectrum. This includes TV Channels 2 through 5 and possibly even Channel 6. The latter because spurious and harmonic energy could reach these higher frequencies.

According to CGC and its unnamed source, San Diego Gas & Electric is aware that deployment of B-P-L in its service arera could cause considerable radio frequency interference. Even so, planners at the utility still appear ready to proceed.

More on this as it develops. I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

Bob Gonsett is known on the ham bands as W6VR. He says that he has a call pending with San Diego Gas & Electric corporate communications department to determine the company's official position on BPL. Bob also says to stay tuned for updates. (CGC)

**

THE BPL FIGHT: A TEXAS TRYOUT

Meantime, Larry Pollack, of the W5YI VEC reports that Central Texas-based Broadband Horizons has launched B-P-L operations in three Texas communities. The pilot projects were launched in mid-June in the towns of Blanco, Burnet and Weimar. According to Mike Steele, Burnet's City Manager, the community has had great success with the initial start-up. He says the city plans to expand B-P-L service it to additional parts of the municipality. (W5YI VEC)

**

THE BPL FIGHT: A BIG WIN IN PEN YAN NY

Meantime the B-P-L test is over in Pen Yan, New York and it appears as if ham radfio has won this round. This,, with word that the broadband provider that's been testing B-P-L in Penn Yan reportedly plans to "move away" from that technology.

According to the ARRL Letter, the Western New York community of some 5000 residents has been considering various proposals with Data Ventures to offer broadband service. A B-PL trial had been underway in Penn Yan for several months.

The village reportedly would get 10 percent of the generated revenue. Now, according to an article in the July 28th edition of the Finger Lakes Times Online, the provider is now proposing to employ wireless mesh "WiFi" technology instead of BPL and ARRL C-E-O Dave Sumner, K1ZZ, has already congratulated Penn Yan Mayor Douglas Marchionda Jr and DVI for going with wireless broadband instead of B-P-L. (ARRL)

**

THE BPL FIGHT: SPOKANE GOES WIDE AREA WI-FI

Spokane, Washington has also opted for Wi-Fi over B-P-L. This as that city inaugurates a wireless Internet access system covering 100 blocks of downtown Spokane.

The wireless zone uses new technology that allows Internet signals to be transmitted more than a mile. This is far beyond the traditional 200- to 300-foot range of previous Wi-Fi systems.

The Wi-Fi area is divided into a private network for use by the city and an open network for the public. Public users can connect for two hours a day at no charge, and subscription plans are in the works for extended use. One Eighty Networks provided the networking for the project. (Published reports)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world WR6ABD repeater serving Aptos California.

(5 sec pause here)

**
RADIO RULES: NO MORE "GROUP X" CALLSIGNS

The ARRL reports that the FCC is no longer issue 2 by 3 format vanity call signs that begin with the prefixes WC, WR, WK and WT. The Commission has acknowledged that it erroneously granted more than 150 WR and WC prefix 2 by 3 vanity call signs from 1997 through September 2003, when it began rejecting such call sign requests.

In the late 1970s, the FCC announced a new Amateur Service call sign assignment system. It provided four standard call sign groups, designated Group A, B, C and D, delineated by license class and issued sequentially with no backfilling. The FCC's Bill Cross, W3TN, recently told the nation's volunteer examiner coordinators that the FCC also had a "Group X." These included WC or RACES, WR repeater, WK and WT-prefix 2 by 3 format call signs reportedly reserved for special-use licenses.

The FCC stopped issuing repeater call signs in 1983 and ceased renewing RACES licenses in 2000. After the current vanity program began in 1996, several ham clubs sought new and formerly held repeater and RACES-type call signs. When the Universal Licensing System came along in August 1999, however, the FCC encountered some licensing system programming shortcomings, including the anomalous assignments of WC and WR prefix 2 by 3 call signs as acceptable formats.

When the FCC implemented programming corrections that halted the issuance of Group X call signs in September 2003, it did not advise the amateur community. As a result, several amateurs who filed for 2 by 3 WC or WR prefix call signs had their applications dismissed without any explanation beyond saying that the applicant's call sign choice was unavailable. That remains the case. The FCC has not indicated whether it plans to address the WC and WR prefix 2 by 3 call signs it's already issued.

In a related matter, the FCC's new Amateur Radio vanity call sign regulatory fee of $20.80 for the 10-year license term goes into effect Friday, August 6. All applications received at the FCC on or after that date must be accompanied by the new, higher fee. (ARRL)

**

ENFORCEMENT: RIS ORDERS REPEATER OFF THE AIR

A 2 meter repeater in the United Kingdom has been ordered off the air after it was involved in an interference issue. The Leicestershire GB3CF system which operates on 145.600 MHz, was closed down on Sunday the 25th of July following a request by the Radio Investigation Service due to an alleged incident of interference.

Service will be resumed as soon as investigations have been completed. The report did not say if the repeater was causing interference to other operations or if it was being interfered with. (GB2RS)

**

RADIO LAW: FEDERAL COURT RULES AGAINST CALIFORNIA CITY

Meantime, on this side of the Astlantic a big win for radio operations but another major loss for a city in its fight to restrict towers and antennas. Bruce Tennant, K6PZW, reports:

--

The attorney for a Rancho Palos Verdes California antenna owner says that his client won a clear victory against the city. This, following a recent federal district court decision requiring Rancho Palos Verdes to allow him to operate a broadcasting business from his unoccupied home. The judge also ruled that the plaintiff, James A Kay. Jr., may seek damages and legal costs.

And this is not the first major loss for the city. Earlier this year, the U.S. 9th Circuit Court of Appeals ruled that another Rancho Palos Verdes antenna owner could seek compensatory damages against the city. As previously reported, Mark Abrams, WA6DPB, said he will file a claim for damage to his two way radio business while he and the city fought numerous court battles over the right to regulate commercial radio frequencies.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Abrams has a 52 foot tall antenna tower in his backyard. The city has appealed the case to the U.S. Supreme Court. The full story is on-line at
http://pvnews.nminews.com/articles/2004/07/26/local_news/news1.txt

**

RADIO LAW: AN ANTENNA FREE ZONE

A real estate developer in Australia has come up with some of the toughest property use restrictions ever dreamed of. W-I-A Newscaster Graham Kemp, VK4BB, joins us with the details:

--

VK2WI have reported on a story that the Albury-Wodonga Development Corporation has set some restrictions on its new 40 block Thurgoona subdivision, near Albury.

Listeners to this WIA National News service through the 146.75 repeater can shed any thoughts of establishing a shack in the backyard, as the corporation has banned the erection of free - standing garages or sheds. One may also forget about erecting any antenna arrays as the corporation has also banned external TV antennas, any TV antennas should be placed under the roof or be internal.

Satellite dishes are also under scrutiny; you can have one, as long as no one can see it!

For the Am ateur Radio Newsline, Im Graham Kemp, VK4BB.

--

With these restrictions in place the potential amateur radio activity, using external antennas, is virtually impossible. (VK2GJH via WIA News)

**

RESCUE RADIO: WX4NHC ACTIVATED FOR HURRICANE ALEX

WX4NHC, the Amateur Radio Station at the National Hurricane Center in Miami was activated on August 3rd. This, in anticipation of the arrival of the first major tropiocal storm of the 2004 hurricane season.

Named Alex, the storm was a catigory one hurricane when the WX4NHC came to life at about 10 a-m Eastern on Tuesday morning. Catigory one means the storm had sustained winds of 75 MPH. It was forecast to strengthen before tracking just off the coast of North Carolina on Tuesday afternoon.

The WX4NHC Group monitored the Hurricane Watch Net on 14.325 Mhz. It also took part in EchoLink and I-R-L-P Skywarn Nets that were operational during the approach and departure of the storm.

WX4NHC has maintained an active Amateur Radio Station at the National Hurricane Center for the past 24 years. Please visit www.wx4nhc.org/WX-form1.html www.voipwx.net for details. (CQ)

**

RADIO LAW: IMPROVING AIRSPACE SAFETY

Garmin, Inc. has been conditionally granted its request to use 978 MHz as an aircraft radio datalink frequency. The idea is to enhance flight safety by enabling aircraft in the same airspace to precisely track each other's movement, reducing the risk of mid-air collisions. Datastreams containing location, velocity, altitude and heading are valuable commodities in the arena of air safety. More is o-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1871A1.doc (CCG)

**

ON THE NET: TEENS SET WIFI RECORD

A group of teenage hamss from the Cincinnati area got an ovation at the recent Las Vegas DefCon hacker conference. This, after organizers announced that the winners of this year's Wi-Fi shootout might have broken a world D-X record for ground distance in establishing a 55.1-mile Wi-Fi connection.

Ben Corrado KC8RKO, Andy Meng N8MX, Justin Rigling KC8OIO and Brandon Schamer KG4NVK won the prize for greatest distance achieved for an 802.11b network.

The teens, all 18 and 19 years old achieved the record using an amplifier and homebrewed antennas on both ends. This exceeded last

year's distance winner by 20 miles. Then, when they established that record, they turned off their amplifiers and broke the record for an unamplified connection at the same distance.

DefCon, in its 12th year is a gathering of hackers, security professionals and intelligence agents from around the world. The Wi-Fi shootout, held for the second time, is among the most popular contests. Six teams participated but it was ham radio know-how that came in number one. (N0AX)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

NAMES IN THE NEWS: GEORGE DILLON NAMED ASSISTANT CHIEF OF THE FCC ENFORCEMENT BUREAU

Some names in the news. Word that George R. Dillon has been named Assistant Bureau Chief of the Enforcement Bureau. Dillon most recently served as the Bureau's Engineering Advisor, assisting the Bureau Chief on a wide range of public safety, technical and management projects. He also represents the Bureau on the Commission's "Engineering-in-Training" Board, for which he received the Chairman's Special Achievement Award, and was the principal leader of the Knowledge Sharing Program, which permits field engineers and headquarters engineers to exchange information and expertise. He is also a member of the Spectrum Policy Task Force. FCC)

**

NAMES IN THE NEWS: G4IDE NAMED WINNER OF TAPR LIFETIME AWARD

And Tuscon Amateur Packet Radio has presented its Lifetime Achievement Award to Roger Barker G4IDE, of Lincolnshire, in the U-K. Barker was honored for his work over the years in providing quality software for Amateur Radio operators that allows them to operate advanced digital modes without the difficulties once associated with these operations. T-A-P-R says that Baker's UI-View program is the benchmark by which all other A-P-R-S mapping software is compared to. (VK2TDS)

**

HAM RADIO IN SPACE: NEW U-K HAM TRANSPONDER IN SPACE ANNOUNCED

AMSAT-UK has announced a new amateur band transponder project. One to be launched as part of the European Space Agency's S SETI Express satellite.

The project was announced at the opening of the 2004 AMSAT-UK Colloquium by Dr. Martin Sweeting, G3YJO. Sweeting expressed his delight that AMSAT-UK has been able to work with the European Space Agency to provide, at very short notice, an S band 2.4ghz transmitter.

The SSETI Express project is believed to be the first ever pan-European student satellite with over 100 students from more than nine different countries working on it. The project is being coordinated and managed buy the Education Office of the European Space Agency. (AMSAT-UK, GB2RS)

**

SPACE SCIENCE: SMALLER ISS PRESENCE ANNOUNCED

NASA and its space partners have approved a scaled-down International Space Station with fewer astronauts and less science. This, so the United States can meet a 2010 deadline for ending shuttle flights.

According to news reports, the space agencies of Russia, Europe, Canada and Japan gave unanimous approval to a NASA plan that means the orbiting platform, now about half completed, will never become the beehive of scientific and commercial research once envisaged. In exchange, NASA will continue with plans to launch research modules owned by its partners, some of them already built.

The agreement means the station will never support long duration crews of seven astronauts, as originally planned. It will however be able to house at least four astronauts starting in 2009.

Phase one of the space-station was put into orbit in 1998. The first astronauts took up residence in 2000. (Published reports)

**

ON THE AIR: OH2B BEACON IS BACK ON THE AIR

Finland's OH2B beacon is back on the air after an absense of two years. OH2B is one of the eighteen stations in the world-wide five-band International Beacon Project network. It has already been heard in the UK on 14.100, 18.110, 21.150, 24.930 and 28. 200 Mhz. (GB2RS)

**

DX

In D-X, word that K4ZLE is returning to Uganda. He plans to operate as 5X2A through the 21st of August. Some effort will be made to operate on the lower H-F bands this year, mostly on CW. Activity is

also planned for PSK31. (GB2RS)

And F6EAY is in Kabul, Afghanistan and has been issued the callsign T6RF. At present he is active only on PSK31. QSL as directed on the air. (GB2RS)

Closer to home K-7-B-V reports that he will operate portable VP5 from the Turks and Caicos Islands from August 9th to the 16th. The trip will have focus on 6 and 2 meter WSJT work during the Perseid Meteor shower that peaks around August 12. H-F will, of course, get plenty of attention as well. QSL direct to K7BV. (VHF Reflector)

**

THAT FINAL ITEM: THE BIRDS ARE BACK

And finally this week, have you ever tuned in an owl? Yes, we said an owl. You know, tne find that go hoot in the night. Newsline's Joe Moell K0OV will tell you how.

--

It's been several months since I've advised you of opportunities for hams and scanner fans to help wildlife researchers tracking radio-tagged creatures. You can monitor these signals from your home or car. If you have direction finding gear, you might make a positive sighting. Right now, there's a need for ham help in the Denton and Collin County areas of Texas, where researcher Jennifer Johnston is releasing rehabilitated orphan Great Horned Owls into the wild. Six birds are on the air near 150 MHz as I speak, and more are expected to follow. We're also standing by for the departure of some young Burrowing Owls from their nesting places in Florida. A biologist from the University of South Florida wants know where they will end up. Nobody knows, but maybe you can help find out.

For all the details, including frequencies and ideas for equipping yourself for this project, go to www.homingin.com. That's HomingIn, as one word, homingin.com.

Thanks for your help. From southern California, where Burrowing Owls are raising their young in our own Imperial Valley, this is Joe Moell, K-zero-oscar-victor, for Amateur Radio Newsline.

--

Again that website is www.homingin.com (K0OV, ARNewsline(tm)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org.

More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Davis, W2JKD, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

# 1944. Scripts & Scruples internet radio soap weekly recap

Newsgroup: rec.radio.broadcasting
Date: 2004-08-07 15:23:51 UTC
From: jaimescott@bolt.com
Message-ID: <cf2s67$rlm$1@xuxa.iecc.com>
Source record: 4434

Episodes 229-233
http://www.scriptsandscruples.com

Gretchen told her ex-husband, Jean-Carlos, that she did not want to see him again. Andrew asked Connie to go to a play with him. By the end of the week, Andrew had confessed his amnesia to Gretchen.

Todd and Hannah reunited at Mack's and they attended Clint's 16th birthday dinner together. Clint asked them if they were a couple. Clint filled Connie in on Dara's life with her drug-addicted mother. Connie wanted to call social services but agreed to wait a day while she checked into Dara's background.

Raven fell deeper into depression. Blake arrived to visit her and Matt showed up at Mack's door while Blake was upstairs with Raven.

Matt talked to Mandy who acted surprised Marty was missing.

Agnes called Father McMahon to discuss Rex's sexuality. She is determined to keep him from Perry. Meanwhile, Perry talked Rex into doing a story on ovarian cancer for Monthly.

Heidi listened to Charlie's song for Adriana and was moved. She went to visit Charlie and told him she was going to let Adriana hear the tape.

Alexandra took Lucas to Monroe, NY to see his father. They were knocking on his door by week's end.

I hope you don't regret that part. My brother-on-law gave me the Kenwood plug-n-play unit, but I heard both this unit (through a modulator) and a full-deal receiver (another Kenwood) that had a 50w/channel amp (and thus, a direct connection from the Sirius headend) and the direct unit was sounded a great deal better than either the cassette insert method or the FM modulator. Plus it came with a CD player and it was a d*** sight louder than the Honda stock radio I had before. So I traded up, and Sirius/Best Buy made it all the more affordable by giving away the headend for free.

> But on the talk and rock stations, the digital
> artifacts are apparent. But I could not care less on those.

I could care, but as I said, there's a choice between listening to what's available in the remote areas (and I won't slam country or christian) but it's really neat to have the same programming (I'm still reluctant to say "station"....it is all Sirius, after all) for the entire duration of a cross-country drive (except in tunnels)!

A Kerbango with a wi-fi antenna would be a helluva good product right now.

With a Sony cassette adapter, there seems to be a little loss of bass, but otherwise it is superior to the FM method, where I sometimes got adjacent-channel interference from a commercial FM station. A direct connection would be nice eventually, but the cassette adapter will work in a rental car. I got the Clarion SIRPNP, which is easily portable with an extra antenna.

## 1949. FCC question

Newsgroup: rec.radio.broadcasting

Hello,

I am in the process of editing a song to submit to a local station for radio play. Is there a list that anyone could direct me to of specific words or phrases which the FCC has taken offence to? Any help would be appreciated. Thank you!

Kent

There is no list. That's a big part of the problem with this whole "indecency" crusade. You don't know what's "indecent" until somebody complains and the F.C.C's thought police agree with them. Generally, anything referring to sexual or excretory functions could be considered "indecent," unless discussed in a strictly clinical context,and maybe even then.

>Just wondering if anyone has been able to get an XM signal in their office.

It all depends on the following:

1) How thick the roof is
2) Does the roof contain a lot of metal
3) If you're close to a window, how close? (note, does NOT have to be
a south facing window!)

I've used XM Radio in my house with very little problems. The secret
is placement.

There is a signal strength meter that you can access via the menu
(this is at least for the Delphi SkyFi receiver).

But there's a hidden menu that shows you better signal strength and
helps in optimal placement.

On the Delphi SkyFi receiver, make sure the unit if off. Press the
following on the keypad:

2 0 7 and then "Enter" (the XM button in the middle of the selection
wheel)

The unit will turn on in the normal fashion. Press the display button
several times. One of the displays will show

SAT 1 SAT 2 TERR

along with a number of squares, some of which may or may not be
checked.

The BER (Bit Error Rate) is the one you want to look at. Make sure at
least one of these has a BER of LESS than 3.0% (the smaller the
better). Above 3.0 the system will have dropouts.

It doesn't matter which one you get less than 3.0, though more than
one is ideal.

Just try it and see what you get.

Dave

As far as anyone's been able to determine, George Carlin's "Seven Dirty Words" seems to comprise the FCC's no-no list.

Office? Jeez...I use mine on a commuter train in the Los Angeles area. Yes,
if you have a window to the south or a terrestrial booster or repeater in
your town it will work. You CAN buy a Delphi Ski-Fi and try out the test
channels BEFORE you sign up, to see if it will work.
WAL*MART carries the XM Ski-Fi, as well as a car kit or home kit. The
"BoomBox" is also available.
Try it...you might like it...a LOT.

Stay away from any of George Carlin's "heavy 7" and you should be OK.
What I want to know is, where is this station? Did they tell you they
would accept it? Most stations in the USA dispatch such unsolicited
material straight into the circular file. What is your "promotional
budget" (hint hint)?

L.A. TIMES Saturday, August 7, 2004

OBITUARIES

Bill Ward, 65; Innovator in Radio Programming

By Dennis McLellan, Times Staff Writer

Bill Ward, former president of Gene Autry's Golden West Broadcasters and general manager of KMPC radio who helped spread the popularity of country music and auto racing on radio in Southern California as general manager of KLAC in the 1970s, has died. He was 65.

Ward died July 30 of an apparent heart attack at his home in Sherman Oaks, said his son, Cameron.

Known as a Southern California broadcasting innovator, Ward was hired by Metromedia in 1971 to program KLAC-AM, which had recently gone to a country music format; he was named general manager within a year.

At KLAC, Ward boosted the popularity of the station and country music in Southern California through programming and promotions, including bringing concerts to Los Angeles and Orange counties.

"At this time, country radio was either on daytime stations or very small, limited-signal facilities," said Carson Schreiber, KLAC's music director from 1971 to 1976.

KLAC, he said, "was the only station that covered all of Los Angeles and Orange County with a full 24-hour signal. Due to the success of KLAC and the country music format in a media capital such as Los Angeles, it also helped country music nationwide."

The success of KLAC, Schreiber said, resulted from playing "all types of country," a "blending of traditional and modern and pop, from Olivia Newton-John, John Denver and the Eagles to Merle Haggard, George Jones and Loretta Lynn."

During his early days at KLAC, Ward brought legendary Los Angeles sportscaster Jim Healy, who had been at the station in the early 1960s, back to do his 15-minute, afternoon sports commentary.

"There was talk at the time that Healy was totally inconsistent with the country format of the station, so it was kind of a daring move on Bill's part," said Healy's son, Patrick, a reporter for KNBC's Channel 4 News.

And yet, he added, "Bill read his audience correctly and not only did he get his country music demographic, he got a huge tune-in factor for the [sports]

show every afternoon."

In 1985, after Ward became general manager of KMPC-AM, he hired Jim Healy to do what grew from a 15-minute sports show to a 30-minute program.

Healy did his last live show on KMPC less than three months before he died from complications of liver cancer in 1994 at age 70.

While Ward was still at KLAC in the early 1970s, the station earned a reputation as "the racing station" for its coverage of auto racing.

"That was part of Bill's strategy when the format changed to country," said Healy. "He saw this overlap in the demographics in people who followed auto racing and enjoyed country music: It was the same audience."

At the time, Healy said, NASCAR was big in the Southeast. And although NASCAR had a couple of races on the West Coast, he said, "nobody was really targeting a mass-media audience. It was very localized. Bill saw the opportunity of NASCAR spreading beyond the Southeast and was one of the first people to recognize that there was an audience for NASCAR in Los Angeles."

Ward obtained the rights to broadcast the races at Riverside International Raceway and Ontario Motor Speedway.

He also launched two auto racing news shows a week, providing young Patrick Healy with his entree into broadcasting.

Born in Italy, Texas, Ward landed his first job as a disc jockey at age 15. After working the all-night shift at WRR in Dallas while attending the University of Texas at Arlington, he was hired to do the morning show at WAKY in Louisville, Ky., in 1959.

In 1967, after stints at WPLO-AM in Atlanta and KBOX-AM in Dallas, Ward joined KBLA as programming director and changed the call letters to KBBQ and the format to country music. He became station manager in 1970 and a year later moved to KLAC.

But Ward, a past president of the Academy of Country Music, "wasn't just country," Schreiber said.

After becoming president of Metromedia in 1980 after a year as executive vice president, Ward presided over what Schreiber called "some of the leading alternative progressive-rock stations in America," such as KMET-FM in Los Angeles, KSAN-FM in San Francisco, WMMS-FM in Cleveland and WMMR-FM in Philadelphia.

Named president of Golden West Broadcasters and general manager of KMPC in 1982, Ward orchestrated the company's 1985 purchase of Los Angeles radio station KUTE-FM, which adopted a soft adult contemporary format with the call letters KLIT-FM. After a couple of other format and call-letter changes, 101.9 became KSCA-FM, Los Angeles' first Triple A (Adult Album Alternative) station.

Ward retired as president in 1997 after Autry sold KSCA, his last radio holding.

In addition to his son, a Toluca Lake resident, the twice-divorced Ward is survived by his daughter, Carmen Cashat of Mansfield, Texas; a half-brother, Joe Wardlaw of Longview, Texas; and a grandson.

A memorial service is pending.

Hi

I am designing a High Sampling Rate Digital receiver with following
building blocks:
1-ADC is AD6645 105MSPS 14-bit
2-DDC is GC4016, 100 MSPS 4-ch
3-...

To design a good pcb layout for acheiving the claimed specifications
of the ADC i decided to use PSD to simulate this Mixed-Mode board.
Unfortunately, i am not familiar with this software, and i think it
take too much to be familiar with it.
My question is: Is it possible to use lower level softwares such as
P*otel to do this job?

Professinal answers are welcomed.

Dirty Word Ban

To amend section 1464 of title 18, United States Code, to provide for the punishment of certain profane broadcasts, and for other purposes. (Introduced in House)

HR 3687 IH 108th CONGRESS 1st Session

H. R. 3687

To amend section 1464 of title 18, United States Code, to provide for the punishment of certain profane broadcasts, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES

December 8, 2003

Mr. OSE (for himself and Mr. SMITH of Texas) introduced the following bill; which was referred to the Committee on the Judiciary

A BILL
To amend section 1464 of title 18, United States Code, to provide for the punishment of certain profane broadcasts, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 1464 of title 18, United States Code, is amended--

(1) by inserting `(a)' before `Whoever'; and

(2) by adding at the end the following:

`(b) As used in this section, the term `profane' , used with respect to language, includes the words `shit', `piss', `fuck', `cunt', `asshole', and the phrases `cock sucker', `mother fucker', and `ass hole', compound use (including hyphenated compounds) of such words and phrases with each other or with other words or phrases, and other grammatical forms of such words and phrases (including verb, adjective, gerund, participle, and infinitive forms).'.

shit piss fuck cunt asshole cock sucker mother fucker ass hole

I have an original-model Sony XM working in an office on the 6th floor of an 8-story concrete/steel building. For this reason it has to work with what signal gets through the windows. The windows are covered with a light-gray plastic film. XM performance was marginal. What signal there was came from a repeater. I've finally taped the antenna to the __outside__ of one of the west-facing windows and operation is flawless. I'm on the US east coast.

The gray plastic window film is a drastic microwave attenuator. I've never managed to get a GPS to work in the office, even when held against the inside of a western window. In fact the GPS never saw more than one satellite. I wouldn't have believed it if I hadn't run the experiment myself.

YMMV

Such cute, benign little words you use for FALSE ADVERTISING !

# 1965. Classic Rock Playlist

Newsgroup: rec.radio.broadcasting
Date: 2004-08-10 02:29:10 UTC
From: horrigan@aol.com
Message-ID: <cf9btm$15o$1@xuxa.iecc.com>
Source record: 4455

I have been working at a job this summer where I drive around a lot in my car, which gives me lots of time to listen to classic rock radio. (That's pretty much all there is, aside from a couple of country stations, and NPR, and one AM station which simulcasts Rush Limbaugh and Limbaugh Wannabes on several different AM frequencies.) There seems to be a rather limited canon of songs which these stations play. Does anyone know who drew up the original list, and does anyone know how few songs are on the list?

I have a few observations about the list. It does seem to be limited to acts and songs which charted high originally--- which means that influential acts who have been popular for a long time but had few if any
high-charting hits are excluded (e.g., the Ramones, Talking Heads, the Clash,
the Cure, Iggy Pop, Bob Marley, etc.) But lots of acts and songs who did chart high are also excluded.

But even given that limitation, the choice of songs is odd. For example, Eric Clapton was a member of several notable bands---Cream, Derek and the Dominoes, and Blind Faith--- but all of those bands are absent (even Derek and the Dominoes who featured Duane Allman.) Only his solo works are included amongst the half-dozen or so Clapton songs in the canon. Three of Clapton's cnonical songs are inferior cover versions--- i.e. his own solo version of Derek and the Dominoes' "Layla," his cover of the Beatles' "While My Guitar Gently Weeps" and his cover version of Bob Marley's "I Shot the Sherrif." (Clapton's cover versions are not terrible, but they are rather bland compared to the originals, which are preferable both from a musical and pop-hookiness standpoint. And the Beatles cover is less frequently repeated than the others, even though he in fact played on the original...)

The pop-radio canon is full of inferior cover versions--- Elton John's "Lucy in the Sky with Diamonds," Aerosmith's "Come Together", and Manfred Mann's "Blinded by the Light" and "Spirit in the Night." (None of those four cover versions are horrible, but the Beatles and Springsteen originals are better, and hookier, and more popular!) In fact, another amusing example of the inferior cover version is Elton John's song "Don't Let the Sun Go Down on Me," which is played not in its original version but in a live version by George Michael where Elton John makes a guest appearance on the last chorus!

To get back to Clapton's few songs, I see that there is no attempt to pander to 2004 sensibilities. When Clapton recorded the song

"Cocaine", cocaine use was socially acceptable. It isn't acceptable today, and yet the song is played over and over and over again. Elton John's "Lucy in the Sky with Diamonds" is another example: in addition to not being one of Lennon and McCartney's greatest songs, it is about LSD, and the Beatles version is better and more popular. And yet, this is one of the few hundred tracks in the canon. Weird....

Comments, anyone?

# 1966. Dr. Demento in New York City

An Evening of Madcap Music & Crazy Comedy!

THE DR. DEMENTO SHOW

AUGUST 15, 2004

Featuring: Special Guest Opener ELVIS PRESTELLO & THE DISTRACTIONS

B.B. King Blues Club & Grill
237 West 42 St NYC, New York
(212) 997-4144

Celebrating his 34th anniversary on radio, Dr. Demento's legendary show comes alive on stage with rare video footage and the Doctor playing all his favorite rare records and outrageous tapes from his extensive archives - some never heard before. He will tells stories and jokes and has a few surprises in store for everyone. Its sure to be an evening of madcap music and crazy comedy from the Doctor of Demented Musicology!

The Dr. Demento Show is a free-wheeling, unpredictable mix of music and comedy. Along with legends like Spike Jones, Tom Lehrer, Stan Freberg, Monty Python, and Frank Zappa, the Doctor plays new funny songs sent in by amateur and professional singers and comedians. That's how the world was introduced to "Weird Al" Yankovic, who went on to become rock music's best-known funny person.

Those who've listened carefully to the Doctor's show have undoubtedly realized that somewhere between his lively larynx and elegant top hat there resides the mind of a seasoned musicologist and dedicated scholar...a world-renowned record collector and music historian, whose lifelong passion for music of all kinds is reflected in his weekly selection of "rare records and outrageous tapes" for the Dr. Demento Show.

Wanted to buy: AM radio station.

The "Radio Crazy" is baaaaaakkk!!!! heh heh.

I want to acquire a "Dog" AM radio station cheap! It need not be profitable. It need not even be on the air as long as the FCC license is in order.

I prefer one with seller financing with little or no money down. I prefer with real estate.

No "pure" AM daytimers. Station MUST be authorized at least 50 watts at night.

I prefer that the station NOT be directional but that is not a must.

Any market considered.

Finder's fee paid to "snitches" if I actually buy or lease the station as a result of your tip.

Tel. (478)741-1710 in Macon, GA.

My email is: wrecktech@yahoo.com

References:

a-Mr parole officer... Mr. Larson E. Rapp, W2BUM, ex-W2RAP, c/o Zing Zing prison, Ossingstink, NY 12345.

b-Trade reference....Purchased a one-way ticket to Rio on Brazilian Bandit Airways, Oshkosh, WI. Don't worry, I won't leave until I have the investor's funds!!!

The references are in fun, the need for the AM station is very real!!

>
> Comments, anyone?

One of my favorite singers recorded a song by one of my favorite songwriters. It became a monster pop hit, which was not common for him or for her. It was not one of his very best songs and it is not a song especially suited to her strengths, although it is a very good song and she sang it very well.

However, it is MUCH more likely that you will hear Janis sing "Bobby McGee" than anything else she ever did. Even though there are certainly songs that she did better and songs that were closer to her heart. "Turtle Blues" may be a my favorite but there are many others.

It is much more likely, except on a country station, that you will hear a Kris Kristofferson song that isn't "Me and Bobby McGee," even though he wrote many other great songs and "Sunday Morning Coming Down" makes him a cultural treasure.

Odd, isn't it?

It is with a heavy heart that we report that Hunter Hancock famous West Coast DJ here in Los Angeles passed away this past weekend after a lengthy illness. Hunter has been retired from Radio since 1967 -- But is credited to being the first DJ ever to have his own Radio show devoted entirely to Rhythm and Blues (then called Race Records) back in 1948. Rock-it Radio was fortunate enough in the year 2000 to have Hunter return to the microphone for one show here on the Rock-it. He was then in his early 80's but you would never know it by his show. In his memory and a tribute to such a fine gentleman we are rebroadcasting that show and putting it in our archives under show #1034. To tune into Hunter for one last time you can at:
http://www.palmsradio.com/rockittext.htm
And then click to show #1034.

RIP Hunter !!!

Bennie Dingo
Rock-it Radio
http://www.rockitradio.net

P.S. there is also a very nice tribute page to Hunter Hancock and his broadcasting history at:
http://www.electricearl.com/dws/hunter.html

For those that may be interested in having a Hunter Hancock broadcast we do offer a couple
at the Rock-it Radio Store at: http://www.palmsradio.com/store.html

All sales of his items will go to make a nice arrangement at his service on behalf of Rock-it Radio Listener's.

## 1973. Re: Deciding XM or Sirius ? Here's a Review

Newsgroup: rec.radio.broadcasting

One can only hope that XMSirius (yeah, they'll merge, eight to five by 2006)will kill the market value of local stations so that people who want to do radio can afford to buy them.

---

Putting MM on the dime would serve a lot of purposes. It would displace the devious FDR, send a signal to the Islamist world, make the currency more attractive, and be a thorn in the ass to the Kennedy Family, to name four good ones.

For sale:

Partial interest in fulltime AM radio station in
Oregon.

(The "Radio Crazy" is baaaakkkk!!)

This is a joint venture. There is an element of risk
and you could lose all or part of your investment.

Station is 1,000 watts at all times and
non-directional. No real estate is included. Repeat,
NO REAL ESTATE IS INCLUDED!!

Active or inactive investors with at least $10,000
each are welcome. Full asking price of the station is
$100,000. (100 grand, kiddies!)

All investors would be on the board with full voting
rights if desired. No individual can own over 49
percent. This means me too!

City is about 20,000 population.

Tel: (478)741-1710 in Macon, GA

We are seeking advertising sales professionals for one of the most well known music industry news broadcast networks around. The position is commission based only. You must have a history in Music or commercial advertising sales. Typically PR type sales people will excell in this regard. You must be able to dedicate at least 20 hrs/week and be able to close your own sales. The applicant is required to send a resume to be considered. We have the shows that draw advertisers and the names everyone knows are on our shows on a regular basis. We have had guests like D-12, Debra Cox, Lou Pearlman(Backstreet Boys/N-Sync) Our regular guests include Justin Prager program director of MTV, Mi2n News, The Future Of The Music Business with Steve Gordon (Former Head Of Business Affairs TV/VIDEO at Sony) Our shows are pro and so should you be. Please contact us soon, there will be limited applicants considered.

Ain't gonna happen. Even if XM and SIRIUS merge, they'll have only a fraction of the audience of terrestrial radio. The current subscriber count is less than 3 million and that's spread over 200+ channels.

I believe it'll be many years before satellite radio becomes a significant threat to radio. It'll take even longer before ad agencies get the kind of numbers from the channels that accept advertising. Agencies have to buy on environment rather than buying buy the numbers, as they're used to doing.

I have both XM and SIRIUS. I generally listen to Classical, Jazz, Oldies and a few other non-commercial channels. That means I'm unreachable by advertisers.

Rich

# 1982. Latest 50's Rock and Roll Shows Online

Newsgroup: rec.radio.broadcasting
Date: 2004-08-13 23:20:07 UTC
From: rockitradio@aol.com
Message-ID: <cfjib7$76f$1@xuxa.iecc.com>

Hello Rock-it Radio Listeners,

Another 7 shows are in store for you this weekend here online at the Rock-it. They are shows #1033 to #1039 with the mix of 50's and early 60's Rock and Roll, Doo Wop, Rockabilly and R&B. We sadly report the passing of a DJ legend as well in this newsletter -- Hunter Hancock and we feature as a final encore performance -- The show he did for us here with Lane Quigley back in 2000. Also, for our East Coast listener's we have news of the upcoming Wildwood's Oldies Concert and our usual playlists of our latest shows.
And these shows are there for your listening pleasure in our archives website at:
http://www.palmsradio.com/rockittext.htm
We also have a new Heebie Jeebies show as well. Out of the Netherlands.

To get things started here are the latest playlists of our latest shows right here on Rock-it Radio.

==========
Butchie Boy's Doo Wop Diner on Rock-it Radio show #1033

>From the High Desert of Southern California -- Littlerock, California to be exact -- Butchie swipes the scorpions off of his mixer board, flicks a tarantula off of his microphone and plays for you those great doo woppin' memories. Here is the playlist.

1. Why - The Impalas - 1958
2. Rosabel - The Magic-Tones - 1962
3. Will you be my love? - The Four J's - 1963
4. Johnny - The Exquisites - 1961
5. Gonna steal your boyfriend away - The Teardrops - 1964
6. I need your love - The Enchanters - 1958
7. Spellbound by the moon - The Enchanters - 1958
8. I'm yours till the end - The Perrenials - 1963
9. When I dream - The Tokens - 1958
10. If I could make you mine - The The Love-Notes - 1957
11. Please let her - The Casinos - 1960
12. I love only you - The Nickels - 1964
13. Deeply in love with you - The New Invictors - 1958
14. Come to me - The Shan-Tones - 1955
15. You are laughing - The Knockouts - 1959
16. Where are you tonight - The Cheerios - 1960
17. Cross my heart - The Themes - 1957
18. Such a fool was I - The Drippers - 1959
19. Little Angel face - The Premieres - 1957
20. Drive-in Movie - The Carousels - 1958
21. Adios - The Five Discs - 1961

Yet more of those righteous & rare Doo Wop tunes groovin' down from the high-desert of Littlerock, California- and that old gringo "Butchie". . . THE cool spot to meet for Doo wopper's far-and-wide!
Like Butchie says he is a request taking machine! So, if you have any Doo Wop songs that you like to hear in future shows you can e mail your request to him at:
ephone6@mindspring.com
And you can check out Butchie's own Doo Wop Diner website at:
http://216.119.98.249/butch/dowop/index.htm

==========
Tribute to Hunter Hancock on Rock-it Radio show #1034

Rock-it Radio is saddened to announce the passing of one of the most important figures in the growth of Rhythm & Blues during its infancy in the early 1950's - Legendary Los Angeles Disk Jockey Hunter Hancock (1916-2004).

In 2000, our Lane Quigley, from The Memory Lane Show, persuaded Hunter to "come out of retirement" and do another "Huntin' with Hunter" program, which aired as Rock-it Radio Show 197. Although it had been 1/3 of a century since he had done a show, Hunter never missed a beat. He was as energetic and corny as ever.

In tribute to the memory of this legend, we are reprising Show 197 and rebroadcasting it in our archives as show #1034, with a special introduction by Lane Quigley. Lane shares his personal thoughts about Hunter Hancock:

"By the time I was born in 1949, Hunter Hancock's daily program was already on the air for over a year. He had been on the air in LA since World War II, but it was in early 1948 that he was given a daily show on KFVD 1020-AM by a sponsor targeting Los Angeles' black population. He initially played big band and be-bop jazz, but a promoter from Modern Records suggested that he play this newer type of music that was being played in the juke boxes of South Central.

"It wasn't known as Rhythm & Blues at the time. The kinder moniker was Jump Blues. Most folks called it Race Music. Hunter's "Harlem Matinee" soon became the most popular show with LA's black population. By the early 50's, the music was known as Rhythm & Blues and his audience grew to include lots of young whites and latinos digging the sounds of Big Jay McNeely, The Robins, Johnny Otis, Earl Bostic, Ruth Brown, Jesse Belvin, The Clovers, Roy Milton and other great artists of the day. While New York may have been the center of the Doo Wop scene, Los Angeles was the hub of the burgeoning R&B field in the early 50's. His influence on the growth of rhythm & blues is immeasurable. And artists knew that Hunter Hancock's programs were THE place for your records to be heard.

"My earliest radio memories are of listening to Hunter Hancock every day. In his prime, he was broadacasting 8 hours a day on three different stations (KFVD, KGFJ and KALI). His program became known as "Huntin' with Hunter". He didn't have a classic radio voice, his jokes were as corny as you could imagine, but he had incredible charisma and energy that listeners loved.

"With the help of his long-time assistant Margie (the sister of The Platters' lead singer, Tony Williams), Hunter would carefully select the music he would

play. By the mid-1960's, he was exlcusively heard on KGFJ radio. As the Civil Rights movement gathered force, new station management started to phase out this older, white DJ in favor of young, hip black jocks. Hunter became the vacation relief and sick-day fill in guy, and had a Saturday morning shift. However, his ability to select his own music was taken away. By 1967, management gave him his playlist that had to be strictly followed. Radio stopped being fun for Hunter during these years and in 1968 he had enough and quit radio altogether. He spent the rest of his working years as a salesman in an unrelated field.

"In 2000, The Southern California Doo Wop Society honored Hunter Hancock with a concert featuring a number of legendary 1950's artists. The outporing of love from the audience was incredible. Hunter was a humble man, and he was truly surprised that so many people even remembered who he was.

"I had the pleasure and privilege of becoming friends with Hunter over the past four years. I would speak to him regularly over the phone and visit him at his retirement home in Claremont when I could. Even as his health was failing, he remained kind, upbeat and funny. He was an avid photographer and loved to share albums of his favorite photos.

"I feel truly honored to have become friends with Hunter over the past few years. He is truly an icon of LA Radio. Long before there was Top 40, Color Radio, Boss Radio, More Hits More Often, Mega, Power or any of the other over-used adjectives, there was Hunter Hancock. A true legend. Rest in Peace Old HH."

You can hear this treasured voice one final time by listening to Show 197 in our Archives.

Earlier this year, Hunter had given Rock-it Radio permission to share some of his actual early broadcasts with our listeners. If you would like to hear how Hunter Hancock sounded on the air in the early 1950's, please check out the Rock-it Radio Store. And we will have a special offer mentioned further down where all monies for sales will go to a flower arrangement for his funeral on the 29th of this month. More on that further down in the newsletter. Here is the playlist of the Hunter Hancock show hosted by Lane Quigley...

1. Western Movies -- The Olympics
2. Sneaking around -- B.B. King
3. Night Train -- Jimmy Forrest
4. Turn on your lovelight -- Bobby Blue Bland
5. I'm going to hug yah, kiss yah and squeeze yah -- Bullmoose Jackson
6. Let the good times Roll -- Shirley & Lee
7. Money Honey -- The Drifters
8. My Babe -- Little Walter
9. Ko Ko Mo -- Gene and Eunice
10. Searchin' -- The Coasters
11. Fannie Mae -- Buster Brown
12. I got a woman -- Ray Charles
13. I'm your Hoochie Koochie Man -- Muddy Waters
14. Love Potion #9 -- The Coasters

15. Lawdy Miss Clawdy -- Lloyd Price
16. There is something on your mind --
17. Sax Shack Boogie -- Amos Wilburn
18. Over and over -- Bobby Day
19. Alone at midnight -- Howlin' Wolf
20. Flip Flop and Fly -- Big Joe Turner
21. Saturday night fish fry -- Louis Jordan
22. Hound Dog -- Big Mama Thornton
23. Good Night my love -- Jesse Belvin
24. Hunting with Hunter Promo. Theme.

==========
Mike Taylor with a double shot of Rockabilly in show #1035

It's a rockabilly double up with Mike Taylor from St. Louis, Missouri. With twin tunes from famous and not as famous Rockabilly performers of the 50's and early 60's. Here is the playlist.

1. High School Confidential -- Jerry Lee Lewis 1958
2. Bonnie B. -- Jerry Lee Lewis 1961
3. That's all right -- Bob Luman (unissued)
4. Stranger than fiction -- Bob Luman (unissued)
5. Rollin' to the jukebox rock -- Benny Joy (unissued)
6. Miss Bobby Sox -- Benny Joy (unissued)
7. Linda Lu -- Ray Sharpe 1960
8. Oh, my baby's gone -- Ray Sharpe 1960
9. Wear out the soles of my shoes -- Deke Dickerson 2002
10. Take the long way home -- Deke Dickerson 2002
11. Don't wait up -- Laura Lee Perkins 1958
12. Gonna Rock my baby tonight -- Laura Lee Perkins (unissued)
13. The train kept a rollin' -- Johnny Burnette 1956
14. All by myself -- Johnny Burnette 1956
15. Cravin' -- Bobby Roberts 1958
16. Big Sandy -- Bobby Roberts <?>
17. Good Rockin' baby -- Sid King & his 5 Strings 1956
18. Gonna Shake this shack tonight -- Sid King & 5 Strings 1956
19. Blueberry Hill -- Elvis Presley 1957
20. One sided love affair -- Elvis Presley 1956

Thanks Mike for another great mix of Rockabilly music from the first era of Rock and Roll. If you would like to send comments or requests to Mike Taylor you can at:
metbet@prodigy.net

==========
Jukebox '54! More of 1954 Rockers with the Big Show and
Clarke Davis in Rock-it Radio show #1036

Another great installment of Jukebox '54 where Clarke Davis continues to dig deeply into Rock and Roll and Rhythm and Blues songs from that momentous year. Here is the playlist.

l. Chuck Higgens -- One Chord Instrumental
2. Harptones -- It Was Just for Laughs
3. Otis Williams/Charms -- Ling Ting Tong
4. Richard Berry -- I'm Still in Love with You
5. Five Echos -- Lonely Mood
6. Dixie-aires -- Traveling All Alone
7. Blue Dots -- Don't Hold It
8. Crickets -- When I Met You
9. Lamplighters -- Smoochie
10. Lloyd Price -- Walkin' the Track
11. Scarlets -- Dear One
12. Marvin & Johnny -- Tick Tock
13. Bucaneers -- Come Back My Love
14. Platters -- Roses of Picardy
15. Swallows -- Our Love is Dying
16. Ray Charles -- Come Back
17. Spaniels -- Let's Make Up
18. Nolan Strong/Diablos -- An Old Fashioned Girl
19. Five Stars -- Where Did Caldonia Go
20. Crows -- Untrue
21. Pelicans -- Chimes

I for one had no idea what a great musical year 1954 and we have received several e mails on how much this series has been appreciated! So, if you haven't done so yet check out all the great tunes from Clarke's Jukebox series. If you would like to send Clarke an e mail of a request or comment you can at: clarkedavis@yahoo.com
Dat's all for now.....more GREAT JUKEBOX MUSIC to come on the Big Show with Clarke Davis.....next week!

==========
Tommy Ryan's Backseat Memories show on Rock-it #1037

Ahhhhhhhhhhhhhh baby! here he is! Tommy Ryan and he is back with more great Doo Wop, R&B and Rock and Roll from it's first decade. When you go to our archives page and click to show #1037 here is what you will hear.

==========
Heebie Jeebies Rockabilly Show #036 here this week on
Rock-it Radio.

During the summer season (june, july and august) there are no live broadcasts
of the Heebie Jeebies radioshow. During this period you'll find a "new" edition
from our archives on this site - this week going clear back to show #036

of the Heebie Jeebies show.
Starting first week of september we will be back with brand new shows with lots
of great oldies. So, from the Netherlands here is Jos Wouthers and The Heebie
Jeebies show with some great rockin' tunes.

1. MAKE UP YOUR MIND Bob Luman 1958
2. I WANT YOUR LOVE The Mellow Drops 1954
3. PINK AND BLACK Sonny Fisher 195?
4. ITCHY TWITCHY FEELING Bobby Hendricks 1958
5. YOUNG AND WILD Al Hendrix 1960
6. BILLY BOY Jimmy Isle 1959
7. I DON'T NEED YOUR LOVE AND KISS Bobby Cash 1964
8. DESTINATION 2165 The Cues 1956
9. MAYBE BABY Buddy Holly 1958
10. DOWN ON THE FARM Big Al Downing 1958
11. CADDY BO The Magnificents 1956
12. CHICKEN LITTLE Ravon Darnell 1956
13. ROCKIN' AND ROLLIN' Curley Langley 1956
14. SWEET LOVE ON MY MIND Jimmy and Johnny 1956
15. OK DOLL IT'S A DEAL Joanie King 1958
16. ROCKIN' MAN Richard Berry 1955
17. QUICK SAND LOVE Macy Skipper 1958
18. WATCHDOG Al Terry 1959

The Heebie Jeebies show are listed just below the rest of the other shows in
our archives page at:
http://www.palmsradio.com/rockittext.htm
and we always keep 3 shows in the archives page.

==========

We have added 26 more new members to the Listeners Club since our last newsletter. We now number 3874 members that have joined our Listeners Club. We hope that you enjoy the rare 50's Rock and Roll, Rockabilly and Doo Wop (which most commercial radio stations have forgotten) that we are able to play for you from Rock-it Radio. Remember, we are here for you!
So if you ever have any requests, dedications, comments and

suggestions we always love to hear from our listeners.
Our e mail address is: Rockitradio@netzero.net

Special Note: Remember if you change Internet providers or E Mail addresses, you need to resubscribe to the Rock-it Radio Listeners club if you wish to continue to receive these playlists bulletin.

==========
Rest in Peace -- Hunter Hancock 1916 - 2004

This past week the radio world lost a true Rock and Roll Icon.
Hunter Hancock was the first DJ to have his own radio show featuring Rhythm and Blues (then called Race Records), back in 1948 here in Los Angeles. Hunter in the 40's, 50's and 60's was a popular figure on the Los Angeles Radio Dial. For the vinyl collector's out there ... some of you may possess the "Cruisin'" Series that featured Top DJ's of the 50's and 60's. Hunter was selected to represent 'Crusin' 1959' LP playing him his style and music on KGFJ in Los Angeles.

After 33 years of retirement as previously mentioned Lane Quigley and the Memory Lane show was able to have Hunter Hancock bring back the "Huntin' with Hunter" Show here on Rock-it Radio. At 84 years old then Hunter showed and proved he still had it and we are honored to put this show one last time in our archives right now in Rock-it Radio show #1034. And will be online up to the 23rd of this month.

Hunter's services will be Saturday, August 28 at 2:00 pm at Claremont United Methodist Church, 211 W. Foothill Boulevard, Claremont, California 91711.

Rock-it Radio will be sending out a floral arrangement from the DJ's and Listeners of Rock-it Radio to the service.
In our Rock-it Store we feature two shows of Hunter Hancock's. One being the show that is being rebroadcast in our archives page under show #1034 that he did for Rock-it Radio back in 2000. And the other is Early Rhythm and Blues shows of Rock-it Radio. All sale monies of these two shows
up to August 23rd will go to the floral arrangement of Hunter's Funeral. As we will be ordering the floral arrangement on the 24th. The Rock-it Store is at: http://www.palmsradio.com/store.html

So, if you would like to have a show of one of Rock and Roll Radio's Historic figures and a true gentleman we are honored to offer this show to our Listening audience.
RIP -- Hunter Hancock

If you would like to check out more on Hunter Hancock -- There is a picture of him with Lane Quigley from 2000 in our DJ page and the official Hunter Hancock website at:
http://www.electricearl.com/dws/hunter.html

==========
Associated Press Obituary on Hunter Hancock

Hunter Hancock, 88, a D.J. Who Embraced Rock Early, Dies
By THE ASSOCIATED PRESS

Published: August 13, 2004

LOS ANGELES, Aug. 12 (AP) - Hunter Hancock, an early rhythm-and-blues and rock 'n' roll D.J. in the western United States, died on Aug. 4 in Claremont, Calif. He was 88.

He died of natural causes in a retirement home, said his daughter, Rosemary Davis.

He was known on the air as Ol' H. H. and was heard from 1943 to 1968 on numerous stations. He was the host of popular radio shows, including "Harlem Holiday," "Harlematinee," "Huntin' With Hunter" and the gospel show "Songs of Soul and Spirit."

He also appeared briefly on KCBS-TV in 1955 with the Friday-night show "Rhythm and Bluesville," on which he interviewed musicians like Duke Ellington, Fats Domino, Little Richard and the Platters.

For several years Pulse survey, a precursor to Arbitron, rated Mr. Hancock's shows No. 1 among black listeners in Southern California. In 1950 The Los Angeles Sentinel rated him the most popular D.J. in Los Angeles among blacks. As a result, people who attended concerts at which Mr. Hancock was the M.C. were often surprised to discover that he was white.

Born in Uvalde, Tex., Mr. Hancock tried nearly two dozen careers, including salesman, bank clerk, chauffeur, drummer and singer, before being hired by

KMAC-AM in San Antonio to read commercials and news.

He was playing jazz on a Los Angeles radio show that had been created to attract black listeners when a record salesman told him that he could attract even more if he added what were then called race records. He played a couple of R&B records offered by the salesman and they were so popular, he recalled years later, that within a week they were all he played. In 1956 he became one of the first D.J.'s to play rock 'n' roll.

==========
If you haven't heard last week's shows yet ....

If you haven't heard last week's shows yet -- you might want to hurry they will be going pretty quick! We are backlogged with great shows coming up and need to get those online.
Including a show from Al "Cool Daddy" Smith and a tribute to Dick Dale; Sheree Homer is back with some Rockabilly Revue show; Lane Quigley and a new installment of the Memory Lane Show and much more -- coming next week on The Rock-it!

==========
The Rock-it Radio Store -- Helps these shows keep coming.

Do you purchase music online? If and when you do could you help support Rock-it

Radio at the same time?
All of the DJ's here at Rock-it Radio are putting there time in for the love of

the music and the joy we get from the letters from our listeners. But it still takes money to bring these shows online.
Copyright fees (Ascap, BMI, SESAC, RIAA all want $$ from Rock-it Radio) and band and webspace etc.

So if you can when you are purchasing Music or Books etc.
Could you please use the links to Amazon.com on our website or check out the Oldies music we have in our Rock-it Store.
When you order anything off this site a small percentage
helps keep the Rock-it Flying and broadcasting online.

The Rock-it Radio Store website is:

http://www.palmsradio.com/store.html

==========
Rock-it Radio Winner for July -- Dave Yoder!!!!!
Refer a Friend -- And have a chance to win a Vintage Broadcasts

Every month we will be giving away 2 airchecks of your choice to lucky winners that are picked from using the Refer a Friend link.
These airchecks are the actual Broadcast recordings available at our Rock-it Radio Store. Including broadcasts and music played by Alan Freed etc.

How to use a Refer a Friend Link: Go to our archives page at:
http://www.palmsradio.com/rockittext.htm

and scroll down to the Blue Box and enter the name of a friend that you think would enjoy Rock-it Radio Online...
and your e mail address in the other box. Press Enter...
The more times you enter the more chances you have to win these actual broadcasts that feature the music, news and DJ's of the 50's and 60's.

Congratulations to July's Winner: Dave Yoder
Dave has chosen the two Hunter Hancock broadcasts from our Rock-it Store and will be shipped to him within this week.

==========
A Big Thank You

Thank you everyone to those that help keep Rock-it Radio online and help us pay

the fees that are necessary to keep this music alive that most commercial oldies

stations have forgotten. A big thank you to everyone that has bought the historical Rock and Roll Radio Shows that we have for sale in the Rock-it Store

at: http://www.palmsradio.com/store.html
Without your support we would of had to cease operation completely. For those that are not familiar with the Rock-it Store we feature actual Radio Broadcasts

from the likes of Alan Freed, the Real Don Steele and many others from the 50's

and 60's. Thank you everyone!!!
s/ Bennie Dingo
Rock-it Radio Online

==========

Tons of Doo Wop Links and Group Harmony Sites at
Our Doo Wop Links Page.
http://www.palmsradio.com/doowop.html

==========
And of course don't forget our Rockabilly Links page as well!

Our Rockabilly Links page can be found at:
http://www.palmsradio.com/rockabillylinks.html

==========
Archives page reminder

Remember, if the show that you want to hear is getting close to the bottom of the list of radio shows, you should tune in as soon as you can.
These shows to have a high audio quality require a lot of internet bandwidth and memory. And currently we can only afford the 14 latest shows online here at Rock-it Radio.
So, when a new show is put online it knocks the oldest one off the internet server.
Usually a show will at least last 10 days, once it is placed in the archives.

==========
Come Join the Rock-it Listener's Club

Want to join our Listeners Club?? And be notified when new shows are playing on

the Rock-it.

If you are not a member of our listeners club it is
really easy to join... just go to our main website at:

http://www.rockitradio.net
and click the button that reads... "click here to be on our mailing
list" at the top of the page. When you click there leave your e mail
address and you are in...
it's free and it gives you the playlists and news on our latest
shows.

==========
The Rock-it DJ Page

Who are all these DJ's on the Rock-it ???
Check out our Rock-it Radio DJ page

at: http://www.palmsradio.com/bio.htm

and see all the folks that make these shows possible.

==========

Well that is just about it for this newsletter and playlists of our latest
shows. We hope that you enjoy them. We will do our best to keep these shows on
for at least 7 days and hopefully 14 days.

All the best always,

Bennie Dingo

# 1985. Digital Radio Commercial Production ...

Newsgroup: rec.radio.broadcasting
Date: 2004-08-14 16:58:48 UTC
From: joe@astoriamovies.com
Message-ID: <cflgc8$f0t$1@xuxa.iecc.com>
Source record: 4475

Hi All :
I saw Roy Cunningham recently, he is well and very busy ... wondering, like he used to, if anyone out there is experimenting with digital recording for radio commercials ... the only 'support' group seems to be a Seattle based software development group that I contribute to ...
Amoung other things, they determined that if someone has recorded 37 discreet individual tracks, at 48 KHz sample rate, and tries to mix-down, the software crashes - they were all 30 second recorded 'passes' ... well now we know that one ...
Gone is all my rack mounted gear, including the Alesis Compressor/Limiter & the DoD Vocalist II - everything now fits in a suitcase, with the main item being a PC laptop, and tons of mics, headphones, cables and adapters ...
I'm using two MIDI keyboards to pre-record and mixdown the production music 'beds' ... anyone else doing the same?

Thanks

Joe

I'm not sure I agree with your count, Rich. I'm not disputing the subscriber number, but isn't it fair to say that anyone listening to any Sirius or XM program ISN'T listening to coventional radio. Thus, there's radio listening, and not-radio listening (XM and Sirius). Point being that it's of no particular significance as to WHAT program is being listened to, just that it's not radio. And using that criteria, 3 million subscribers equates to more than 1% of the U-S population - even more when considering only those who use radio. Isn't it fair to say that this, assumed to be uniformly distributed, also means that Sirius and XM (assuming all subscribers are listening at once...a big assumption, certainly) would be similar to an in-market radio station with a 1 share, a level that many stations in densely-served markets would consider to be a success? If this share grows by just one order of magnitude, it's going to start hurting traditional broadcasting.

But Sirius' and XM's business model doesn't require advertisers....it's subscription, and the subscription model is more efficient than the advertiser-supported model (as XM seems to have found out). We don't got to show you any stinkin' ad agencies, and could care less what numbers they're looking for!

> I have both XM and SIRIUS. I generally listen to Classical, Jazz,

Except, you've noted, when you listen to NPR. And NPR's programming on Sirius does do underwriting announcements, too, you know. Not exactly being deluged with advertising matter, true, but it's still a far cry from being an advertiser-free zone. So considering how desireable NPR listeners are, it might just be the bleeding edge on where satellite "advertising" dollars starts seeping to.

For sale:

(The "Radio Crazy" is baaaaakkk!)

Partial interest in Alaska AM/FM station. This is a joint venture. There is an element of risk and you could lose all or part of your investment. (Legal disclaimer....not likely to be the actual case!)

AM is fulltime, 1 KW, non-directional. FM is class "A".

Only stations in the city except for some translators.

Active or inactive investors with at least $20,000 each are welcome. All investors would be on the board with full voting rights if desired. No individual can own controlling interest. That includes me!

This is a very important tourist city! There is train service there to Anchorage. The city also has an airport.

Tel: (478) 741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV

>Are they still on the air?

Yes.

Jim Bohannon still hosts the late night program that was once Larry King's old Mutual show. It is now distributed by Westwood One (which bought Mutual some years ago) and I believe Jimbo is live 10 PM-1 AM ET now. The affiliate list is somewhat smaller than it was in the Larry King days, due to more recent popular shows like Premiere's Coast to Coast AM.

Jimbo also does WW1's "America in the Morning", a one-hour news show which generally airs around 4 or 5 AM ET, as a lead-in to local news blocks on major news/talk stations around the country. By far that show's most "interesting" clearance is as the lead-in to Howard Stern on Washington, DC hot talker WJFK/106.7...Jimbo lives in that market.

Bernie Ward (no relation to your humble poster) is no longer heard nationally, as ABC Radio dumped his weekend show...but ABC O&O KGO/810 in San Francisco still carries his show locally, weeknights from 10 PM-1 AM PT.

Since you're using the percentage of population figure, it wouldn't be
share. It would be rating, a much smaller figure. The percentage of
the total population listening to anything is far less than the
percentage of persons using radio at a given time.

I'm also not convinced that satellite subscribers are regular radio
listeners. If they are, they're probably not listening to satellite
exclusively and are sharing the time with conventional radio.
Remember, the traffic and weather channels serve only a small segment
of the population and fewer within that population actually listen to
it or know it exists.

I believe most satellite listeners left radio some time ago and are
sampling the new medium. Unfortunately for me much of what I disliked
about terrestrial radio has been taken to the sky: mindless, yelping
jocks on some channels mispronouncing the names of local cities I got
XM and SIRIUS to get away from the Party Martys of the world (there
are many others) only to find they're there. I turn it off just as I
turned off my FM radio before it.

>But Sirius' and XM's business model doesn't require advertisers....it's subscription,
>and the subscription model is more efficient than the advertiser-supported model (as

Approximately 40 of the 100 channels are commercial. I assume they
hope for some ad income. How will they convince an agency that people
are listening to commercials? There's no reverse data stream that
monitors what I listen to.

>Except, you've noted, when you listen to NPR. And NPR's programming on Sirius does

Neither service claimed to be advertiser free. Both said that
non-music channels would carry spots. Until recently, even some music
channels did. I've always expected News, Talk and entertainment
channels would be commercial.

Part of what terrestrial radio sees as competition involves listeners
moving to some other service and advertisers doing the same. I haven't
heard any broadcaster complain that satellite radio is siphoning ad
dollars away.

Rich

# 1991. Amateur Radio Newsline™ Report 1409 August 13, 2004

Amateur Radio Newsline™ Report 1409 August 13, 2004

---
---

Note: Ladies and gentlemen This weeks newscast is dedicated to the memory of the late Roy Neal, K6DUE who passed away a year ago on August 15, 2003, following heart surgery. Roy was our friend, teacher and served as the first elected vice-president of Amateur Radio Newsline after it became a 501(c)(3) nor-for-profit corportation. We miss him very much. "So Roy old buddy: This one is for you."

de WA6ITF

---
---

Amateur Radio Newsline report number 1409 with a release date of Friday, August 13th, 2004 to follow in 5-4-3-2-1.

The following is a QST. Australian hams ask for a new ham band at 500 kilohertz, lots of news world wide on the B-P-L front, and the FCC talks about license processing. Find out the details on Amateur Radio Newsline report number 1409 coming your way right now.

RESTRUCTURING: AUSTRALIA TO SEEK NEW 500 KHZ HAM BAND

The old 500 kHz the international maritime distress frequency could become part of a new ham band down-under. This if the Wireless Institute of Australia has its way. W-I-A News anchor Graham Kemp, VK4BB, joins us from Brisbane with the details:

--

The WIA will shortly be writing to the ACA to request the establishment of an experimental amateur allocation at 500 kHz. Thats the 600 meter band.

WIA Director Glenn Dunstan VK4DU said "500 kHz was the international maritime Morse code distress frequency for most of the 20th century."

"It was the frequency used by the RMS Titanic to send her plaintive cries for help that April night in 1912. It was the frequency used by thousands of merchant ships to signal their plight in times of peace

and war."

"More often than not, 500 kHz was witness to a ship's Radio Officer's last moments. Many Radio Officers literally died at the key as their ship fell victim to enemy action or was overwhelmed by the forces of nature".

Glenn, himself an ex ship's Radio Officer, said. 500 kHz was replaced in 1999 by the Global Maritime Distress and Safety System (GMDSS), which uses a combination of automated terrestrial and satellite communications.

"Since the introduction of the GMDSS in 1999, 500 kHz use has declined rapidly. The last official users of the frequency, China, plan to discontinue operation in 2005. The frequency is no longer used in Australia, New Zealand, the Pacific or the US."

500 kHz has been instrumental in saving tens of thousands of lives in the last 100-odd years. It is thus fitting that the frequency be preserved as a 'spectrum national park' to commemorate those who paid the supreme sacrifice in its use.

"The best way to do this is to establish a small slice of spectrum around 500 kHz - probably 495 to 510 kHz - as an amateur radio band. The band would also provide a unique opportunity for experimentation with antennas, propagation, advanced narrow band modulation techniques and receiver digital signal processing." Glenn said.

--

It should be noted that 500 kHz is still allocated to the maritime service so any permanent amateur access in Australia or elsewhere is some way off. It is worthy of note that the I-A-R-U Region 1 and various United States Amateur long wave groups are actively pursuing an experimental allocation at 500 kHz as well. (WIA News)

**

HAM RADIO IN SPACE: ECHO ON THE AIR

AMSAT has announced that the F-M voice repeater on the Oscar-51 Echo satellite is on for a trial period. The transponder was turned on the 30th July for about three weeks during which command stations will be watching the power budget and adjusting the transmitter power for good management of the battery.

For those wanting to give Echo a try, its uplink is on 145.920 MHz F-M, with 67 Hz CTCSS tone. The downlink is on 435.300 MHz.

A reminder that this is a trial of the F-M voice repeater only. Please do not send any data through it. AMSAT says that the digital portion of Echo is not yet ready for use. (ANS)

**

THE BPL FIGHT: ZS AMATEURS SHOULD REPORT BPL TESTING TO THE SARL

Turning to news on the B-P-L front, South Africa AMSAT President Hans van de Groenendaal, ZS6AKV, has now spoken out. He is urging amateurs and short-wave listeners in that nation to report any unusual but consistent interference to the South African Radio League. This as the rollout of Broadband over Powerline continues in that country.

ZS6AKV says that South African hams must continue to be vigilant about any B-P-L testing taking place in their neighborhoods. Hans says that following Pretoria's example several other metropolitan areas have shown an interest and may soon be starting trials. (SARL)

**

THE BPL FIGHT: FOLLOW-UP ON SAN DIEGO GAS AND ELECTRIC

Back here in the USA, San Diego Gas & Electric has confirmed that it is considering entering the Broadband Over Powerline business, but for now that's about all the utility will say.

As reported last week, San Diego Gas & Electric planners are reported to be seriously considering endorsing and sponsoring Broadband Over Powerline data transmissions on the company's power distribution system. The story went on to state that San Diego Gas & Electric is also considering entertaining proposals to partner with vendors for one or more field demonstrations of BPL. This, this despite being advised that B-P-L will cause considerable interference.

Bob Gonsett, W6VR, whose CGC Communicator newsletter was first to break the story put in a call to the utility to try and get a bit more information. San Diego Gas & Electric response was brief and far from insightful. All that the utility would tell Bob is -- and we quote: "Like many utilities, San Diego Gas & Electric is assessing B-P-L technologies."

W6VR says that while we are all temporarily left in the dark as to San Diego Gas & Electric plans, those plans will eventually surface. As soon as they do, we will let you know. (CGC)

**

THE BPL FIGHT: NORTH CAROLINA UTILITY ENDING BPL FIELD TRIAL

Meantime, North Carolina's Progress Energy Corporation says it's completed Phase II of its B-P-L field trial in the Raleigh, and will be closing down the experiment. In an August 4th internal memorandum reported by the ARRL Letter, the company said its program to test the viability of providing broadband service to communities it serves will wrap up by the end of August. The company reportedly will shut down the system once it's able to move its BPL customers to other broadband providers. Progress Energy's decision comes on the heels of announced shutdowns of B-P-L field trials in Penn Yan, New York, and Cedar Rapids, Iowa. (ARRL)

**

RADIO LAW: HAM RADIO EXEMPT FROM CONTROVERSIAL SAN DIEGO WIRELESS SITING ORDINANCE

Wireless communication antennas would be allowed in San Diego, California's residential areas only as a last resort under a new policy recently approved by the City Council. By a vote of 7 to 1, the council has approved a new policy governing the design and placement of wireless antennas, making it more difficult for cellular carriers and others to erect towers in or near residential areas.

Under the new regulations, the process will differ according to location. Some approvals would be made at the staff level, while others would require an okay from a planning group, a hearing officer or the full Planning Commission.

In the past 20 years San Diego has processed over 1,400 applications for cellular telephone towers but the the city has not tracked how many were actually built but there is some good news for hams on this one. ARRL Southwestern Division Vice Director Tuck Miller, NZ6T, reports that amateur radio is specifically exempted from the terms of this new ordinance

More about the ordinance itself is on-line at http://www.signonsandiego.com/uniontrib/20040728/news_1m28wireless.html (CGC with further information from NZ6T)

**

RESCUE RADIO: COMMISSION SEEKS COMMENTS ON RULE CHANGES FOR EAS

The FCC has issued a Notice of Proposed Rulemaking concerning possible revisions to the Emergency Alert System or E-A-S system. The agency is seeking comment on how E-A-S can become a more effective tool for warning the American public of an emergency. It is also a chance for radio amateurs to suggest new ways that the E-A-S might be interfaced with our hobby to better serve the public in time of need. More information is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-250534A1.doc (CGC)

**

WITH THE FCC: MANAGING THE DATA PROCESSING OF LICENSES

The FCC has a lot to say about the Universal Licensing System and some of the problems it faces in administering it. Especially those dealing with paper filings from the ham radio community.

Donna Scott, a Program Analyst with the Wireless Telecommunications Bureau in Gettysburg, Pennsylvania. And in a recent interview with Rain, he outlined just one of the most common situations that her office runs into. This one dealing with applicants who faili to provide their FCC Identification Number better known as an F-R-N:

--

Scott: "I believe that one of the biggest problems that we encounter are paper filings coming here to Gettysburg with no F-R-N on the application. The F-R-N is mandatory. This is the registration number that you obtain through the CORES database and without that number wee really can't accept that application. And we do have a high volume of paper applications that still come in without that number."

--

Probably the second highest volume of amateur applications that need to be returned are those from hams who do not read what's right in front of them. These are hams who insist on sending form 605 V-E-C to the agency. This even though the form 605 V-E-C is only for use by those who give the tests and not for the ham in the street filing paperwork with the agency:

--

Scott: "It clearly states that it is a 605 VEC form. It says do not send to the FCC on the top and on the bottom. Yet amateurs continue to send them here to Gettysburg and we cannot accept them."

--

According to Scott, the only version of Form 605 the FCC will accept from the ham community is the one that contains the approval statement from the governments Office of Management and Budget and that carries a current issue date.

This is only a fraction of the information that Donna Scott described about managing the nuts and bolts of the FCC's licensing system. There's lots more with her on this weeks RAIN Report. Its on line right now at www.rainreport.com or on the phone at 847-827-7246. (RAIN)

**

ENFORCEMENT: ELECTRIC UTILITY WARNED AGAIN ABOUT INTERFERENCE TO HAM RADIO

A Tennessee power company has been told that its response to an earlier RFI complaint is inadequate. The FCC's Daryl Duckworth,

NN0W, explains:

--

Audio report only. Download the MP3 newscast audio file at
www.arnewsline.org

--

The FCC told the utility that the it knows of no powerline noise problem associated in any way with guy wires. (FCC, RAIN)

**

ENFORCEMENT: $3000 FINE FOR UNLICENSED OPERATION

The FCC has issued Donald Donovan Jackson of St. Petersburg, Florida a monetary forfeiture in the amount of $3,000. This, for operating an FM broadcast station on the frequency 102.1 MHz without Commission authorization.

On November 23, 2002, agents from the Tampa Office observed a broadcast station operating on the frequency 102.1 MHz. A search of Commission records revealed no FM radio station licensed to operate on 102.1 MHz in that area. The agents then used direction-finding techniques and determined that the broadcasts originated from a commercial office building located in St. Petersburg. Field strength measurements taken near the sight of the broadcast indicated that the signal strength exceeded the permissible limits for a non-licensed station.

The agents interviewed the owner of the building who provided them with a copy of the lease for suite. He also informed them that a person named Donald Donovan Jackson operated the radio station from the premisis.

On January 15, 2003, agents from the Tampa Office interviewed Jackson and conducted an inspection of the station after again observing a radio station operating on 102.1 MHz. During the interview, Jackson admitted to leasing the property and operating the radio station from that location. He was given the usual 30 days to pay the fine or to file an appeal. (FCC)

**

RADIO LAW: DOJ WANTS MANDATED DIGITAL WIRETAP ABILITY

The Department of Justice says that technology companies should be mandated to ensure that law enforcement agencies can install taps on Internet traffic and new generations of digital communications devices. This as the D-O-J and other agencies press for a digital expansion to the Communications Assistance for Law Enforcement Act.

The Communications Assistance for Law Enforcement Act is a 1994 law that requires the telecommunications industry to build into its

products tools that U.S. investigators can use to eavesdrop on conversations with a court order. The investigatory agencys are worried that federal agents would not be able to install court ordered wiretaps against criminals who communicate using the latest digitally encrypted technologies. Lawyers for the Justice Department, FBI and Drug Enforcement Administration say that this need requires immediate attention and resolution by the Federal Communications Commission. (Published news reports)

**

RESCUE RADIO: HAM RADIO AT THE DEMOCRATIC CONVENTION

Eastern Massachusetts ARES was activated to support Public Service Agencies during the Democratic National Convention which concluded Friday, July 30th. The ARRL reports the Salvation Army, that the American Red Cross, and the Massachusetts Emergency Management Agency all helped out. ARES was ready to provide any needed support in case of catastrophic loss of the communication infrastructure that had been installed for the event. (ARRL)

**

RADIO IN SERVICE: FITTEST SEEKING ASSISTANCE

Those involved with Rescue Radio may find some appeal in this. The United Nations World Food Program's FITTEST operation is currently seeking Telecommunications Specialists for 3 to 6 month contracts.

FITTEST stands for the Fast Internet and Telecoms Emergency Support Team and it offers constant travel, constant pressure, constant challenges in a job that still allows you to combine a family life and a professional life in a two or three months on one month off duty regime.

Typically, FITTEST hires people with non-conventional career paths to provide emergency deployment of VHF and HF networks, Satellite and Telephone systems. They are looking only at people with direct hands-on experience willing to work under harsh circumstances.

To get an idea of the work they do in Iraq and Afghanistan have a look at their web sites. They are in cyberspace at http://www.hiciraq.org/mediacentre/gallery/FITTEST/ http://www.qsl.net/ya5t. Applications to mark.tell@wfp.org and martin.kristensson@wfp.org (WIA News)

ON THE WEB: BIG CHANGES AT THE QRZ.COM WEBSITE

Some major changes are taking place at the very popular QRZ.com ham radio website. We have more in this report:

--

Fred Lloyd, AA7BQ, who runs the QRZ.com website has announced major changes in access to posting access site. This, for registered users whose login user name is not the same as their ham radio callsign.

Basically, Lloyd says that only contributors who have legitimate ham radio calls will be permitted to post material to most areas of the website. To accomplish this Llloyd says that he has created two levels of membership. One called Ham is for those who want to use their call sign as registration login. The other will be the Guest member for those who may not have a call or who simply prefer not to use it.

Those who have a call and use it for login purposes will have full read and write access to all public Q-R-Z forums, plus the ability to make changes and/or additions to listings in the callsign database. Guest level members will be limited to posting on the sites Help Forum, the For Sale Forums, and the Questions and Answers Forum. These people will have no access to callsign database editing functions.

QRZ.com has also instituted several rules to help keep order and decorum at the site to make it enjoyable for the majority of those signing on. Among these are the right to terminate the current and future membership status of any user who engages in the harassment of any other user, staff member, or volunteer of this system or the use of any information derived from the website that contributes in any way to unsolicited e-mail of any kind. Also banned is the posting of obscene or offensive material on the site and QRZ managers say that they reserve the sole right to determine what is either offensive or obscene.

Lloyd says that the site will shortly begin converting current members to the new system. If you are currently signed up using your call sign as your logon I-D you need do nothing. For those who are not, QRZ we will be assigning new login names to those current members who are apparently licensed amateurs. The new logon name will be the same as the callsign that is listed in the QRZ call sign database as the 'Primary Callsign' for that account. Each user who is subjected to a name change will be notified via e-mail at the address we have on file for that user. Names that cannot be

associated with a callsign will be assigned to the Guest level of membership.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Lots more about the changes are on the QRZ.com website under the title QRZ System Announcement. Lloyd and the managers at QRZ say that they hope that these hanges will improve the website for everybody. (QRZ.com)

HAM RADIO IN SPACE: ARISS AT HAM FAIR JAPAN

Amateur Radio on the International Space Station will be represented at the upcoming Ham Fair 2004 on Saturday and Sunday, August 21st and 22nd in Tokyo, Japan. The ARISS U.S. team provided photographs of the radio equipment in the Service Module to J-J-one-L-Y-U. He will display some of them along with a modified Kenwood D 700 E transceiver which looks like the flight radio. Other photos will be used in a slide show as part of an exhibit in the Kenwood Booth. Ham Fair is sponsored by the Japan Amateur Radio League with about 28,000 people is expected at the event. (ARISS)

SPACE: NASA APPROVES NEW DESIGN FOR SHUTTLE EXTERNAL TANK FITTING

NASA is moving ahead with plans to redesign a part of the Space Shuttle external fuel tank that investigators believe played a critical role in the Space Shuttle Columbia accident.

The Space Shuttle program will soon begin installing an improved bipod fitting that connects the external fuel tank to the Shuttle during launch. Investigators believe that during Columbia's launch in
January 2003, insulating foam from the bipod area fell off the external tank and damaged the left wing of the Space Shuttle. (NASA)

**

WORLDBEAT - BELGIUM: GALILEO GPS SYSTEM APPROVED BY EU

Officials in Brussels, Belgium say the satellite navigation system the European Union is planning will not clash with one already in operation by the United States. This, as an agreement signed in that European nation will make sure that the proposed Galileo system will be compatible with the U-S owned Global Positioning System.

Galileo is slated to begin operation 2008. Together the two systems are expected to become a single world standard for positioning and radio navigation. (ANS)

**

DX

In D-X, keep an ear open for GB6LOG. This is a special events station on the air through August 18th to celebrate the 60th anniversary of the Liberation of Guam during World War 2. The station will operate on all modes. QSL via the RSARS QSL Bureau to receive the special QSL from this station. For further information contact G0SWY by e-mail to G0SWY@aol.com (GB2RS)

And hams on Gibraltar have been granted permission to use the special prefix ZB300 during the month of August. This to celebrate the colony's three hundred years of British sovereignty. If you work ZB300, QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: SIGHTLESS UK NEWSREADER TAKES TO THE AIR

And finally this week the story of a U-K ham who has overcome physical disability to become a news anchor for the Radio Society of Great Britains GB2RS News. Jeramy Boot, G4NJH, in Nottingham has the rest of the story:

--

Now news about a new GB2RS newsreader. Annick Morris, M0HDE, of Wigan, Lancashire, became a GB2RS newsreader two when she read the news through the GB3MR repeater. What makes this special is that 18-year old Annick has been blind from birth.

She has a specially-adapted laptop computer which accepts Word files, and which has a single-line display consisting of raiseable dots which form characters in Braille. Annick can read Braille fast enough to read out loud from this, although she can only 'see' one character at a time.

In the future Annick will be newsreading on 6 metres, 2 meters and 70 centimetres and it is hoped that she may also transmit on two bands at once.

Jeramy Boot, G4NJH.

--

This is not the volunteer first job that M0HDE has been successful in. At age 14 Annick attended the "Child of Achievement Awards" in central London after impressing organizers with her determination to overcome obstacles presented by her disability. This award recognizes the efforts of young people under the age of 16 who make special efforts to overcome personal disability or illness while also managing to help others. We at Amateur Radio Newsline welcome Annick Morris, M0HDE, to the worlds ever growing ham radio news reporting teams.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

And this note. Because our staff will be in Huntsville to present the Young Ham of ther Year Award there will be no update on the 661-

296-2407 line on Friday, August 20th. Phone users are asked to utilize another of the automated phone lines operating in other regions. Our 661-2407 line will update to the latest newscast on Monday, August 23rd.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Damron, N8TMW, and I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening. Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

Just a short one : I've been looking at the playlist for the classic
rock
station here on the Oregon Coast ... I've spent literally hours in the
air-room
watching the list, since I'm a candidate to possibly take over the
show in the
future, also up for 'traffic assistant' on the 'ofice' side of the
station ...
I've noticed the oddness of the list - for example the entire Eagles
are fair
game for the station, but I've only heard a couple of the
lesser-known, and yes, tamer songs played too ...
There are lists on the 'Net that list the 'acceptable' bands, which
DOES
include the Rolling Stones, and I never hear any of those either :))
I think it's like 'soft rock', or in this case, 'soft classic/oldies'
that
is bold from a programmer view, but tame for those of us who remember
the
entire albums and the really radical cuts almost never aired, even
then ...
Of course, I would say I'd change the automated play-list if I were
the on-air
host, but that may not happen here ... more likely I'll be on the tech
side, or
production/announcing if at all. I'm currently looking for another job
locally,
and having met everyone at the local stations, including 'Mr. Big', I
think
looking elsewhere for work, and doing independent
commercials/production and
recording is my future anyway ...
If you are someone who might have a hand in a playlist at a
station(s) in the
future, consider looking on the 'Net, compile a list of 'acceptable'
classic
rock artists, then look for the most obscure and radical album cuts
you can
find .. I remember the Doors are listed too ! Give me a couple days
and I'll
cause a commotion with 'acceptable' artists, without crazy
announcements and
production effects :))
It's all there - just do the research ... If a station isn't playing

what YOU
want to hear, contact them .. that simple

good luck

Amateur Radio Newsline™ Report 1409 August 13, 2004

---
---

Note: Ladies and gentlemen This weeks newscast is dedicated to the memory of the late Roy Neal, K6DUE who passed away a year ago on August 15, 2003, following heart surgery. Roy was our friend, teacher and served as the first elected vice-president of Amateur Radio Newsline after it became a 501(c)(3) nor-for-profit corportation. We miss him very much. "So Roy old buddy: This one is for you."

de WA6ITF

---
---

Amateur Radio Newsline report number 1409 with a release date of Friday, August 13th, 2004 to follow in 5-4-3-2-1.

The following is a QST. Australian hams ask for a new ham band at 500 kilohertz, lots of news world wide on the B-P-L front, and the FCC talks about license processing. Find out the details on Amateur Radio Newsline report number 1409 coming your way right now.

RESTRUCTURING: AUSTRALIA TO SEEK NEW 500 KHZ HAM BAND

The old 500 kHz the international maritime distress frequency could become part of a new ham band down-under. This if the Wireless Institute of Australia has its way. W-I-A News anchor Graham Kemp, VK4BB, joins us from Brisbane with the details:

--

The WIA will shortly be writing to the ACA to request the establishment of an experimental amateur allocation at 500 kHz. Thats the 600 meter band.

WIA Director Glenn Dunstan VK4DU said "500 kHz was the international maritime Morse code distress frequency for most of the 20th century."

"It was the frequency used by the RMS Titanic to send her plaintive cries for help that April night in 1912. It was the frequency used by thousands of merchant ships to signal their plight in times of peace

and war."

"More often than not, 500 kHz was witness to a ship's Radio Officer's last moments. Many Radio Officers literally died at the key as their ship fell victim to enemy action or was overwhelmed by the forces of nature".

Glenn, himself an ex ship's Radio Officer, said. 500 kHz was replaced in 1999 by the Global Maritime Distress and Safety System (GMDSS), which uses a combination of automated terrestrial and satellite communications.

"Since the introduction of the GMDSS in 1999, 500 kHz use has declined rapidly. The last official users of the frequency, China, plan to discontinue operation in 2005. The frequency is no longer used in Australia, New Zealand, the Pacific or the US."

500 kHz has been instrumental in saving tens of thousands of lives in the last 100-odd years. It is thus fitting that the frequency be preserved as a 'spectrum national park' to commemorate those who paid the supreme sacrifice in its use.

"The best way to do this is to establish a small slice of spectrum around 500 kHz - probably 495 to 510 kHz - as an amateur radio band. The band would also provide a unique opportunity for experimentation with antennas, propagation, advanced narrow band modulation techniques and receiver digital signal processing." Glenn said.

--

It should be noted that 500 kHz is still allocated to the maritime service so any permanent amateur access in Australia or elsewhere is some way off. It is worthy of note that the I-A-R-U Region 1 and various United States Amateur long wave groups are actively pursuing an experimental allocation at 500 kHz as well. (WIA News)

**

HAM RADIO IN SPACE: ECHO ON THE AIR

AMSAT has announced that the F-M voice repeater on the Oscar-51 Echo satellite is on for a trial period. The transponder was turned on the 30th July for about three weeks during which command stations will be watching the power budget and adjusting the transmitter power for good management of the battery.

For those wanting to give Echo a try, its uplink is on 145.920 MHz F-M, with 67 Hz CTCSS tone. The downlink is on 435.300 MHz.

A reminder that this is a trial of the F-M voice repeater only. Please do not send any data through it. AMSAT says that the digital portion of Echo is not yet ready for use. (ANS)

**

THE BPL FIGHT: ZS AMATEURS SHOULD REPORT BPL TESTING TO THE SARL

Turning to news on the B-P-L front, South Africa AMSAT President Hans van de Groenendaal, ZS6AKV, has now spoken out. He is urging amateurs and short-wave listeners in that nation to report any unusual but consistent interference to the South African Radio League. This as the rollout of Broadband over Powerline continues in that country.

ZS6AKV says that South African hams must continue to be vigilant about any B-P-L testing taking place in their neighborhoods. Hans says that following Pretoria's example several other metropolitan areas have shown an interest and may soon be starting trials. (SARL)

**

THE BPL FIGHT: FOLLOW-UP ON SAN DIEGO GAS AND ELECTRIC

Back here in the USA, San Diego Gas & Electric has confirmed that it is considering entering the Broadband Over Powerline business, but for now that's about all the utility will say.

As reported last week, San Diego Gas & Electric planners are reported to be seriously considering endorsing and sponsoring Broadband Over Powerline data transmissions on the company's power distribution system. The story went on to state that San Diego Gas & Electric is also considering entertaining proposals to partner with vendors for one or more field demonstrations of BPL. This, this despite being advised that B-P-L will cause considerable interference.

Bob Gonsett, W6VR, whose CGC Communicator newsletter was first to break the story put in a call to the utility to try and get a bit more information. San Diego Gas & Electric response was brief and far from insightful. All that the utility would tell Bob is -- and we quote: "Like many utilities, San Diego Gas & Electric is assessing B-P-L technologies."

W6VR says that while we are all temporarily left in the dark as to San Diego Gas & Electric plans, those plans will eventually surface. As soon as they do, we will let you know. (CGC)

**

THE BPL FIGHT: NORTH CAROLINA UTILITY ENDING BPL FIELD TRIAL

Meantime, North Carolina's Progress Energy Corporation says it's completed Phase II of its B-P-L field trial in the Raleigh, and will be closing down the experiment. In an August 4th internal memorandum reported by the ARRL Letter, the company said its program to test the viability of providing broadband service to communities it serves will wrap up by the end of August. The company reportedly will shut down the system once it's able to move its BPL customers to other broadband providers. Progress Energy's decision comes on the heels of announced shutdowns of B-P-L field trials in Penn Yan, New York, and Cedar Rapids, Iowa. (ARRL)

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Broward Amateur Radio Club net serving Ft. Lauderdale Florida.

(5 sec pause here)

**

RADIO LAW: HAM RADIO EXEMPT FROM CONTROVERSIAL SAN DIEGO WIRELESS SITING ORDINANCE

Wireless communication antennas would be allowed in San Diego, California's residential areas only as a last resort under a new policy recently approved by the City Council. By a vote of 7 to 1, the council has approved a new policy governing the design and placement of wireless antennas, making it more difficult for cellular carriers and others to erect towers in or near residential areas.

Under the new regulations, the process will differ according to location. Some approvals would be made at the staff level, while others would require an okay from a planning group, a hearing officer or the full Planning Commission.

In the past 20 years San Diego has processed over 1,400 applications for cellular telephone towers but the the city has not tracked how many were actually built but there is some good news for hams on this one. ARRL Southwestern Division Vice Director Tuck Miller, NZ6T, reports that amateur radio is specifically exempted from the terms of this new ordinance

More about the ordinance itself is on-line at http://www.signonsandiego.com/uniontrib/20040728/news_1m28wireless.html (CGC with further information from NZ6T)

**

RESCUE RADIO: COMMISSION SEEKS COMMENTS ON RULE CHANGES FOR EAS

The FCC has issued a Notice of Proposed Rulemaking concerning possible revisions to the Emergency Alert System or E-A-S system. The agency is seeking comment on how E-A-S can become a more effective tool for warning the American public of an emergency. It is also a chance for radio amateurs to suggest new ways that the E-A-S might be interfaced with our hobby to better serve the public in time of need. More information is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-250534A1.doc (CGC)

**

WITH THE FCC: MANAGING THE DATA PROCESSING OF LICENSES

The FCC has a lot to say about the Universal Licensing System and some of the problems it faces in administering it. Especially those dealing with paper filings from the ham radio community.

Donna Scott, a Program Analyst with the Wireless Telecommunications Bureau in Gettysburg, Pennsylvania. And in a recent interview with Rain, he outlined just one of the most common situations that her office runs into. This one dealing with applicants who faili to provide their FCC Identification Number better known as an F-R-N:

--

Scott: "I believe that one of the biggest problems that we encounter are paper filings coming here to Gettysburg with no F-R-N on the application. The F-R-N is mandatory. This is the registration number that you obtain through the CORES database and without that number wee really can't accept that application. And we do have a high volume of paper applications that still come in without that number."

--

Probably the second highest volume of amateur applications that need to be returned are those from hams who do not read what's right in front of them. These are hams who insist on sending form 605 V-E-C to the agency. This even though the form 605 V-E-C is only for use by those who give the tests and not for the ham in the street filing paperwork with the agency:

--

Scott: "It clearly states that it is a 605 VEC form. It says do not send to the FCC on the top and on the bottom. Yet amateurs continue to send them here to Gettysburg and we cannot accept them."

--

According to Scott, the only version of Form 605 the FCC will accept from the ham community is the one that contains the approval statement from the governments Office of Management and Budget and that carries a current issue date.

This is only a fraction of the information that Donna Scott described about managing the nuts and bolts of the FCC's licensing system. There's lots more with her on this weeks RAIN Report. Its on line right now at www.rainreport.com or on the phone at 847-827-7246. (RAIN)

**

ENFORCEMENT: ELECTRIC UTILITY WARNED AGAIN ABOUT INTERFERENCE TO HAM RADIO

A Tennessee power company has been told that its response to an earlier RFI complaint is inadequate. The FCC's Daryl Duckworth,

NN0W, explains:

--

Audio report only. Download the MP3 newscast audio file at
www.arnewsline.org

--

The FCC told the utility that the it knows of no powerline noise problem associated in any way with guy wires. (FCC, RAIN)

**

ENFORCEMENT: $3000 FINE FOR UNLICENSED OPERATION

The FCC has issued Donald Donovan Jackson of St. Petersburg, Florida a monetary forfeiture in the amount of $3,000. This, for operating an FM broadcast station on the frequency 102.1 MHz without Commission authorization.

On November 23, 2002, agents from the Tampa Office observed a broadcast station operating on the frequency 102.1 MHz. A search of Commission records revealed no FM radio station licensed to operate on 102.1 MHz in that area. The agents then used direction-finding techniques and determined that the broadcasts originated from a commercial office building located in St. Petersburg. Field strength measurements taken near the sight of the broadcast indicated that the signal strength exceeded the permissible limits for a non-licensed station.

The agents interviewed the owner of the building who provided them with a copy of the lease for suite. He also informed them that a person named Donald Donovan Jackson operated the radio station from the premisis.

On January 15, 2003, agents from the Tampa Office interviewed Jackson and conducted an inspection of the station after again observing a radio station operating on 102.1 MHz. During the interview, Jackson admitted to leasing the property and operating the radio station from that location. He was given the usual 30 days to pay the fine or to file an appeal. (FCC)

**

RADIO LAW: DOJ WANTS MANDATED DIGITAL WIRETAP ABILITY

The Department of Justice says that technology companies should be mandated to ensure that law enforcement agencies can install taps on Internet traffic and new generations of digital communications devices. This as the D-O-J and other agencies press for a digital expansion to the Communications Assistance for Law Enforcement Act.

The Communications Assistance for Law Enforcement Act is a 1994 law that requires the telecommunications industry to build into its

products tools that U.S. investigators can use to eavesdrop on conversations with a court order. The investigatory agencys are worried that federal agents would not be able to install court ordered wiretaps against criminals who communicate using the latest digitally encrypted technologies. Lawyers for the Justice Department, FBI and Drug Enforcement Administration say that this need requires immediate attention and resolution by the Federal Communications Commission. (Published news reports)

**

RESCUE RADIO: HAM RADIO AT THE DEMOCRATIC CONVENTION

Eastern Massachusetts ARES was activated to support Public Service Agencies during the Democratic National Convention which concluded Friday, July 30th. The ARRL reports the Salvation Army, that the American Red Cross, and the Massachusetts Emergency Management Agency all helped out. ARES was ready to provide any needed support in case of catastrophic loss of the communication infrastructure that had been installed for the event. (ARRL)

**

RADIO IN SERVICE: FITTEST SEEKING ASSISTANCE

Those involved with Rescue Radio may find some appeal in this. The United Nations World Food Program's FITTEST operation is currently seeking Telecommunications Specialists for 3 to 6 month contracts.

FITTEST stands for the Fast Internet and Telecoms Emergency Support Team and it offers constant travel, constant pressure, constant challenges in a job that still allows you to combine a family life and a professional life in a two or three months on one month off duty regime.

Typically, FITTEST hires people with non-conventional career paths to provide emergency deployment of VHF and HF networks, Satellite and Telephone systems. They are looking only at people with direct hands-on experience willing to work under harsh circumstances.

To get an idea of the work they do in Iraq and Afghanistan have a look at their web sites. They are in cyberspace at http://www.hiciraq.org/mediacentre/gallery/FITTEST/ http://www.qsl.net/ya5t. Applications to mark.tell@wfp.org and martin.kristensson@wfp.org (WIA News)

ON THE WEB: BIG CHANGES AT THE QRZ.COM WEBSITE

Some major changes are taking place at the very popular QRZ.com ham radio website. We have more in this report:

--

Fred Lloyd, AA7BQ, who runs the QRZ.com website has announced major changes in access to posting access site. This, for registered users whose login user name is not the same as their ham radio callsign.

Basically, Lloyd says that only contributors who have legitimate ham radio calls will be permitted to post material to most areas of the website. To accomplish this Llloyd says that he has created two levels of membership. One called Ham is for those who want to use their call sign as registration login. The other will be the Guest member for those who may not have a call or who simply prefer not to use it.

Those who have a call and use it for login purposes will have full read and write access to all public Q-R-Z forums, plus the ability to make changes and/or additions to listings in the callsign database. Guest level members will be limited to posting on the sites Help Forum, the For Sale Forums, and the Questions and Answers Forum. These people will have no access to callsign database editing functions.

QRZ.com has also instituted several rules to help keep order and decorum at the site to make it enjoyable for the majority of those signing on. Among these are the right to terminate the current and future membership status of any user who engages in the harassment of any other user, staff member, or volunteer of this system or the use of any information derived from the website that contributes in any way to unsolicited e-mail of any kind. Also banned is the posting of obscene or offensive material on the site and QRZ managers say that they reserve the sole right to determine what is either offensive or obscene.

Lloyd says that the site will shortly begin converting current members to the new system. If you are currently signed up using your call sign as your logon I-D you need do nothing. For those who are not, QRZ we will be assigning new login names to those current members who are apparently licensed amateurs. The new logon name will be the same as the callsign that is listed in the QRZ call sign database as the 'Primary Callsign' for that account. Each user who is subjected to a name change will be notified via e-mail at the address we have on file for that user. Names that cannot be

associated with a callsign will be assigned to the Guest level of membership.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Lots more about the changes are on the QRZ.com website under the title QRZ System Announcement. Lloyd and the managers at QRZ say that they hope that these hanges will improve the website for everybody. (QRZ.com)

HELPING HAND: THE AUDIO NETWORK

The U-K Audio Network is a website for the blind using audio web pages, controlled by standard keyboard navigation. It is the first site in the world that needs no adaptive technology to be accessible by blind and partially sighted users.

There are many resources on the Audio Network. For example, it is the only place on the Internet where you can listen to BBC Radio schedules for the forthcoming week in audio. And speaking of radio, there is a whole section of radio stations where you can change channels at the touch of a button, without having to worry about annoying pop ups or filling out a registrations.

Best of all this website is free. Its located in cyberspace at http://www.yrguk.com (RSGB)

**

THE SOCIAL SCENE: DENVER IN AUGUST

Turning to the ham radio social scene, the Denver Radio Club Hamfest is scheduled for Sunday, August 22nd at the Jefferson County Fairgrounds in Golden. Doors open at 8:30 AM with door prizes awarded throughout the fest. For more information contact Bryan Steinberg by e-mail to kc0cua@arrl.net or visit the clubs website at www.qsl.net/q0tx (KC�CUA)

**

THE SOCIAL SCENE: CFMC IN ILLINOIS IN SEPTEMBER

And the Chicago F-M Club will hold its annual Hamfest and Flea Market on the weekend of September 18th and 19th. The venue is the Lake County Fairgrounds in the city of Grasyslake, Illinois. More information is on-line at wwwchicagofmclub.org. (E-mail)

**

HAM RADIO IN SPACE: ARISS AT HAM FAIR JAPAN

Amateur Radio on the International Space Station will be represented at the upcoming Ham Fair 2004 on Saturday and Sunday, August 21st and 22nd in Tokyo, Japan. The ARISS U.S. team provided photographs of the radio equipment in the Service Module to J-J-one-L-Y-U. He will display some of them along with a modified Kenwood D 700 E transceiver which looks like the flight radio. Other photos will be used in a slide show as part of an exhibit in the Kenwood Booth. Ham Fair is sponsored by the Japan Amateur Radio League with about 28,000 people is expected at the event. (ARISS)

**

SPACE: NASA APPROVES NEW DESIGN FOR SHUTTLE EXTERNAL TANK FITTING

NASA is moving ahead with plans to redesign a part of the Space Shuttle external fuel tank that investigators believe played a critical role in the Space Shuttle Columbia accident.

The Space Shuttle program will soon begin installing an improved bipod fitting that connects the external fuel tank to the Shuttle during launch. Investigators believe that during Columbia's launch in
January 2003, insulating foam from the bipod area fell off the external tank and damaged the left wing of the Space Shuttle. (NASA)

**

WORLDBEAT - BELGIUM: GALILEO GPS SYSTEM APPROVED BY EU

Officials in Brussels, Belgium say the satellite navigation system the European Union is planning will not clash with one already in operation by the United States. This, as an agreement signed in that European nation will make sure that the proposed Galileo system will be compatible with the U-S owned Global Positioning System.

Galileo is slated to begin operation 2008. Together the two systems are expected to become a single world standard for positioning and radio navigation. (ANS)

**

DX

In D-X, keep an ear open for GB6LOG. This is a special events station on the air through August 18th to celebrate the 60th anniversary of the Liberation of Guam during World War 2. The station will operate on all modes. QSL via the RSARS QSL Bureau to receive the special QSL from this station. For further information contact G0SWY by e-mail to G0SWY@aol.com (GB2RS)

And hams on Gibraltar have been granted permission to use the special prefix ZB300 during the month of August. This to celebrate the colony's three hundred years of British sovereignty. If you work ZB300, QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: SIGHTLESS UK NEWSREADER TAKES TO THE AIR

And finally this week the story of a U-K ham who has overcome physical disability to become a news anchor for the Radio Society of Great Britains GB2RS News. Jeramy Boot, G4NJH, in Nottingham has the rest of the story:

--

Now news about a new GB2RS newsreader. Annick Morris, M0HDE, of Wigan, Lancashire, became a GB2RS newsreader two when she read the news through the GB3MR repeater. What makes this special is that 18-year old Annick has been blind from birth.

She has a specially-adapted laptop computer which accepts Word files, and which has a single-line display consisting of raiseable dots which form characters in Braille. Annick can read Braille fast enough to read out loud from this, although she can only 'see' one character at a time.

In the future Annick will be newsreading on 6 metres, 2 meters and 70 centimetres and it is hoped that she may also transmit on two bands at once.

Jeramy Boot, G4NJH.

--

This is not the volunteer first job that M0HDE has been successful in. At age 14 Annick attended the "Child of Achievement Awards" in central London after impressing organizers with her determination to overcome obstacles presented by her disability. This award recognizes the efforts of young people under the age of 16 who make special efforts to overcome personal disability or illness while also managing to help others. We at Amateur Radio Newsline welcome Annick Morris, M0HDE, to the worlds ever growing ham radio news reporting teams.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

And this note. Because our staff will be in Huntsville to present the Young Ham of ther Year Award there will be no update on the 661-

296-2407 line on Friday, August 20th. Phone users are asked to utilize another of the automated phone lines operating in other regions. Our 661-2407 line will update to the latest newscast on Monday, August 23rd.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Damron, N8TMW, and I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening. Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

>one order of magnitude, it's going to start hurting traditional broadcasting.

Since you're using the percentage of population figure, it wouldn't be
share. It would be rating, a much smaller figure. The percentage of
the total population listening to anything is far less than the
percentage of persons using radio at a given time.

I'm also not convinced that satellite subscribers are regular radio
listeners. If they are, they're probably not listening to satellite
exclusively and are sharing the time with conventional radio.
Remember, the traffic and weather channels serve only a small segment
of the population and fewer within that population actually listen to
it or know it exists.

I believe most satellite listeners left radio some time ago and are
sampling the new medium. Unfortunately for me much of what I disliked
about terrestrial radio has been taken to the sky: mindless, yelping
jocks on some channels mispronouncing the names of local cities I got
XM and SIRIUS to get away from the Party Martys of the world (there
are many others) only to find they're there. I turn it off just as I
turned off my FM radio before it.

>But Sirius' and XM's business model doesn't require advertisers....it's subscription,
>and the subscription model is more efficient than the advertiser-supported model (as
>XM seems to have found out). We don't got to show you any stinkin' ad agencies, and
>could care less what numbers they're looking for!

Approximately 40 of the 100 channels are commercial. I assume they
hope for some ad income. How will they convince an agency that people
are listening to commercials? There's no reverse data stream that
monitors what I listen to.

>Except, you've noted, when you listen to NPR. And NPR's programming on Sirius does
>do underwriting announcements, too, you know. Not exactly being deluged with
>advertising matter, true, but it's still a far cry from being an advertiser-free
>zone. So considering how desireable NPR listeners are, it might just be the bleeding
>edge on where satellite "advertising" dollars starts seeping to.

Neither service claimed to be advertiser free. Both said that
non-music channels would carry spots. Until recently, even some music
channels did. I've always expected News, Talk and entertainment
channels would be commercial.

Part of what terrestrial radio sees as competition involves listeners
moving to some other service and advertisers doing the same. I haven't
heard any broadcaster complain that satellite radio is siphoning ad
dollars away.

Rich

I just returned from a visit with some relatives and found their media habits interesting, and rather discouraging.

Their radio listening, such as it is, is confined almost exclusively to music on public radio. And most of their music listening is from CD's, not radio. They get 100% of their broadcast news from television, totally ignoring NPR, one of the country's best all-news radio stations, and a multiple-Murrow-award winning news/talker. In my time with them no radio in their house was ever turned on, and the car radio (as opposed to the CD player) was used only sporadically.

Of course, these people are "55+," so radio doesn't want them. And their 19-year-old son has an XM subscription. I've never heard even one of his favorite bands on the air anyway, so I'm pretty sure radio is completely irrelevant to him.

Hoping I can hang on for a few more years...

Mark Howell

# 2000. Re: Jim Bohannon and Bernie Ward

<gschnabl@LivernoisYards.com> wrote:

>If both programs were carried live, there would be no time conflict with
>each other.

If you mean Jim Bohannon and Bernie Ward, the subjects of this thread,
you're correct...Jimbo is 10 PM-1 AM Eastern (7-10 PM Pacific), and
Bernie follows on KGO at 10 PM-1 AM Pacific (1-4 AM Eastern).

I believe Bernie used to be carried on the "ABC News & Talk" satellite
radio channel, which ABC programs on both XM and Sirius. Looking at
the schedule now, it appears the slot is filled by whoever is doing
the old Sam Donaldson ABC Radio slot on the bird now, and a repeat of
Sean Hannity. The channel no longer carries any KGO hosts (I think
KGO overnighter Ray T. was also carried back then) or any
non-syndicated ABC O&O hosts.

# 2001. Is AM Radio Harmful?

Newsgroup: rec.radio.broadcasting
Date: 2004-08-17 00:12:17 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cfrih1$qgj$1@xuxa.iecc.com>
Source record: 4494
Cross-posted to: alt.radio,rec.radio.broadcasting,uk.radio

By Stephen Leahy
Aug. 16, 2004

Korean scientists have found that regions near AM radio-broadcasting towers had 70 percent more leukemia deaths than those without.

The study, to be published in an upcoming issue of the International Archives of Occupational and Environmental Health, also found that cancer deaths were 29 percent higher near such transmitters.
.
Two years ago an Italian study found death rates from leukemia increased dramatically for residents living within two miles of Vatican Radio's powerful array of transmitters in Rome.

The Koreans looked at the death rates in 10 regions with AM radio-transmitting towers broadcasting at more than 100 kilowatts and compared them with control areas without transmitters. The substantially higher cancer mortality in those who lived within two kilometers of the towers led researchers to conclude that more investigation was needed.

However, they also said their study did not prove a direct link between cancer and the transmitters.

"There have been many studies like these, and they aren't very convincing," said Mary McBride, an epidemiologist at the British Columbia Cancer Agency. Many other factors could have contributed to those cancer rates, said McBride, who has headed a number of similar studies and found no direct link.

Equally important is that studies in the lab don't show how radio waves can produce cancers, she said.
Debate continues over the health effects of radio waves from transmitters, both large and small, and other forms of electromagnetic fields, including power lines and microwaves.

Sam Milham, a Seattle-based epidemiologist and a pioneer in electromagnetic-field research, is convinced there are health effects. "Lots of research papers from around the world show increased cancers near transmitters, although TV and FM transmitters are more often implicated."

Moreover, many lab studies show low-frequency EMF disrupt living cells, Milham asserts. Critics like McBride say such results are often difficult to reproduce at other labs. Milham says that's because of differences in the Earth's magnetic field and stray EMF.

In an attempt to settle some of this, California's Department of Health Services reviewed all the current studies of EMF risks from power lines, wiring and appliances in 2002. It found no conclusive evidence of harm. However, links to childhood leukemia, adult brain cancer and Lou Gehrig's disease could not be ruled out.

"I'm convinced that politics and corporate interests are behind denials (that say) there are no health effects," said Milham.

Meanwhile, the FDA and the World Health Organization are urging more studies, especially of radio waves from cell phones.

# 2004. XM use (granted, I am a very small sample)

Newsgroup: rec.radio.broadcasting
Date: 2004-08-17 00:12:20 UTC
From: tkoppel@nyx3.nyx.net
Message-ID: <cfrih4$qgu$1@xuxa.iecc.com>
Source record: 4493

I bought XM radio service just before Christmas (December 2003), so my experience is not even a year long. However, in my case, getting XM changed my radio listening habits around 98%.

The *only* time I have my radio on (regular) FM is Saturday mornings at 10:00am for NPR's Car Talk. With that exception, my XM is always in use. Once XM adds channel 133 in September (Public Radio stuff) I may not even need to do that.

If you take n=100 meaning the time that I am listening to the XM signal, I would guess about 40% of the time I am listening to XM talk stations (usually CSPAN or the comedy channels, occasionally CNBC and CNN, every now and then Fox). The remaining 60% is music, and that varies based on my mood and the time of day.

Absolutely the #1 selling point for me was reception *everywhere*. MountAINS OF Pennsylvania, coast of North Carolina, never any fadeouts or other reception issues. (Well, I shouldn't say NEVER. On some roads, like the Pa. TUrnpike where there are hills right next to the road, the satellite can't see the antenna and I get occasional dropout. But almost perfect, and far better than AM or FM.

Since PBS went commercial, I get more for my $10/month on XM than I ever did with a membership to a public radio station.

Actually, I meant Jimbo and C2C. I'm not familiar with Bernie Ward. Jimbo hasn't been carried in Detroit since WXYT went full-time sports some three years ago. WJR is the only mainstream non-sports or non-men's issues talker here, and during Jimbo's timeslot it carries Schlesinger.

I even got on Jimbo's show once 5 years ago. I'm still batting 1000 when it comes to getting unto talk shows - 7 times called in - 7 times on the air in 40 years!

Gary

For god's sake DONT tell the NAB about that! They are still running around
telling everyone that satellite radio is just a fad, its going away and cant
succeed. Meanwhile, back at the IBOC ranch they are STILL trying to get it
to work and sound good. Plans to destroy the AM broadcast dial is still in
the works. This is the NAB's answer to a fad that wont be around <smile>
Meanwhile....XM, Siruis and Worldspace continue to get new customers. More
and more channels get added, the choice gets better. Car units, home
units,Computer units. Around the corner are "Walkman" style radios, armband
holders for XM's Roadie. It will be easy to listen to satellite radio
everywhere.
Here is whats going away....Multipath distortion,commercials,stupid
DJ's,commercials,stale traffic reports,commercials,dumb contests,
commercials and did I mention commercials?

EAT SHIT NAB!!!! hear the driving public, were tired of your manhandling of the radio offerings. The satellite providers are giving us what we want. Programming, news,talk,traffic,weather,comedy,albums,all genre of music WHERE we want, WHEN we want it and how we want it and its here NOW and getting better all the time.
As far as IBOC goes, GO SUCK AN EGG, yep...it will take off just like AM STEREO (another failure). KISS OFF NAB! you have trashed the public listener way too long, we now have a choice and will exercise it. Oh sure! you will have holdouts that wont pay for radio. Remember when they wouldnt pay for television too?
Other "Fads" that wouldnt make it either...Color TV....Microwave Oven...Cable TV..personal computer (who the hell would even need one).

# 2007. Media Preservation Foundation web page update

Newsgroup: rec.radio.broadcasting
Date: 2004-08-17 03:51:09 UTC
From: media@gte.net
Message-ID: <cfrvbd$kg3$1@xuxa.iecc.com>
Source record: 4497

The Media Preservation Foundation web page www.jingles.org has been expanded to include audio files of jingles, links to other jingle web pages and other radio related "curiosities".
The web page is :
http://www.jingles.org/mpf/mpfaudio.html

Since www.reelradio.com has such a large number of airchecks on line, the Media Preservation Foundation will instead exhibit jingles, commercials and other historically interesting audio files.

The first files include for the first time anywhere the early 1950's Modernaires custom jingles for KLAC, out takers of the famous Drake "Rum Pum" sessions of 1969, "inside the mix" PAMS cuts from Series #18, #24, an others for KYLE and Jingles American Style Sampler - Volume 1, a jingle sampler produced by jingle collector Fred Vobbe in Ohio.

The audio section will be updated several times a month. The plan is to add five to ten new audio files each month.

In addition, internet resources for radio historians and jingle collectors, http://www.jingles.org/Links.htm, has been introduced. This is both a links page and a data base page with information pulled from the Foundation's paper archives. The most complete accounting of TM Productions jingle packages is among the data base items.

The Media Preservation Foundation also has available the most complete account of the history of radio ID jingles ever published: the book "The Hits Between The Hits". It traces the post World War II growth of local radio, the evolution of local programming, the roots of Top 40 radio and the introduction and development of radio ID jingles.

Oh...well, as far as the stations being able to carry both Jimbo and
C2C...yes. C2C's live clearance starts at 1 AM ET last I checked (10
PM PT). But Premiere dumps a few hours of last night's show as a
"pre-feed", so some stations out west carry the show as early as 8 PM,
and some in the Eastern zone carry the show as early as 10 or so!

> cant
> succeed.

No, they are not. The only thing the NAB has asked is that both satellite providers fulfil on the promise and the license taht stipulate that there will be no localization of channels.

Most NAB members realize that satellite has a very good position along side radio, TV, cable, X-Boxes and microwave ovens as part of the mix of products available to Americans. There have always been a percentage of Americans who don't listen to radio (about 5%) and listen lightly (5%) who seek something other than the fare on terrestrial radio. Reggae in Minneapolis, Classical in Prescott, Hip Hop in Fargo, Salsa in Des Moines... things that a nationally significant group want, but which group is insignificant on the local level.

Satellite complements terrrestrial radio, and it will be a long time before it competes.

>Meanwhile, back at the IBOC ranch they are STILL trying to get it
> to work and sound good.

It's working and sounding good on about 400 stations now. And there are over 2000 more committed to adding it in the next few years. Factories are working overtime to produce the new transmitters and antennas, and orders are backloged.

> Plans to destroy the AM broadcast dial is still in
> the works. This is the NAB's answer to a fad that wont be around <smile>

IBOC was not the NAB's idea. It was invented by a private company, and invested in by a group of broadcasters.

> Meanwhile....XM, Siruis and Worldspace continue to get new customers.

Worldspace is nearly bankrupt, and does not serve the Americas at all.

XM has 2 million subscribers nationally after just short of three years of marketing. 2 million is less than the cume of one news station in New York City. One station has more listeners than all the subscribers to XM. Sirius is so far behind the dust has settled between them and XM, too.

> More
> and more channels get added, the choice gets better. Car units, home
> units,Computer units. Around the corner are "Walkman" style radios,
> armband
> holders for XM's Roadie. It will be easy to listen to satellite radio
> everywhere.

No, it won't. The satellite signal does not work well on hand held devices
that are in motion, and in office reception is, at best, tricky. I know. I
had 6 units in a building 2 misles form a repeater, and they hardly ever
worked.

> Here is whats going away....Multipath distortion,commercials,stupid
> DJ's,commercials,stale traffic reports,commercials,dumb contests,
> commercials and did I mention commercial

Well, how 'botu this: 95% of Americans listen to land based radio weekly.

>
> EAT SHIT NAB!!!! hear the driving public, were tired of your manhandling
> of
> the radio offerings.

The NAB is a trade association. It does not dictate programming, commercial
policy or music. Market forces do that.

> The satellite providers are giving us what we want.

That, then, is why only 1 out of every 150 Americans has it, and evne those
people listen to twice as much land based radio as XM or Sirius?

> Programming, news,talk,traffic,weather,comedy,albums,all genre of music
> WHERE we want, WHEN we want it and how we want it and its here NOW and
> getting better all the time.

Great. Go listen some more.

> As far as IBOC goes, GO SUCK AN EGG, yep...it will take off just like AM
> STEREO (another failure).

AM stereo was too late to market, when no one cared about AM. IBOC is dual
band, digital and has the backing of thousands of stations and dozens
ofreceiver manufacturers.

> KISS OFF NAB! you have trashed the public listener
> way too long, we now have a choice and will exercise it. Oh sure! you will
> have holdouts that wont pay for radio. Remember when they wouldnt pay for
> television too?

Cable stated when the average person had 3 TV choices or less, often with
snow and static. LA has 87 commercial radio choices. There is no comparison.

> Other "Fads" that wouldnt make it either...Color TV....Microwave
> Oven...Cable TV..personal computer (who the hell would even need one).

IBOC.

Radio today has as much per-person weekly listening as it had the year before the TV freeze was lifted, when less than 43% of Americans could receive one TV signal. We have had the transistor, TV, color TV, CATV, Cable, video games, the Internet, and lots of other entertainment sources. Radio is very resilient.

Good stuff! We used to have the power company crews pour used PCB oil
on our access roads. Really kept the dust down. Back then, nobody thought
anything that came in drums marked "SAFETY OIL" would turn out to be unsafe.

Probably all the lead contamination in the groundwater from our sweated-
connection radials didn't help either.

I left out 50 KW CKLW across the river as a talker. Actually, CKLW has C2C
from 1 EDT to 5, except on the weekends when it goes to 6. On Sat/Sun,
there's a rebroadcast of both Art Bell's programs from the past weekend.from
9 PM to 1A. So on Sat/Sun, there's 9 straight hours of C2C!

WJR is a 50 KW ABC O&O that plays a rather conservative slant all day long
except for 3 hours of Mitch Albom, who is very left-wing. Those two stations
fill the bill for me, as I keep my radio on while I do copy and technical
editing for a number of hours daily.

Gary

# 2016. DJ's First Book Jumps To #2 Best Selling Paperback at Booklocker.com

Newsgroup: rec.radio.broadcasting
Date: 2004-08-18 00:49:59 UTC
From: Corey Deitz <coreydeitz@comcast.net>

Source record: 4356

For Release: Immediate
Contact: Corey Deitz
Email: corey@thecashcage.com

DJ's First Book Jumps To #2 Best Selling Paperback at Booklocker.com

(Little Rock) - "The Cash Cage", a new book that reveals the inner workings of the Radio business, has jumped to the #2 Best Selling Paperback at Booklocker.com.

"The Cash Cage" was written by Corey Deitz, a 25-year Radio veteran who dishes the dirt on an army of wanderers who spin tunes, give the time and temp, take the requests and when the pressure is on are easily discarded by a cutthroat business that disguises itself as your favorite song.

"I wrote this book for both listeners and people in Radio," says Deitz, "because in this business the real show starts when the mike turns OFF."

Corey Deitz has hosted radio shows in Chicago, Cleveland, Columbus, Richmond, Virginia Beach, St. Louis, Toledo, Little Rock and other cities. He has experienced all facets of the Radio business from top to bottom.

"The Cash Cage" is a captivating trip through an exciting medium held together by an odd lot of gypsies who move from city-to-city in an incessant struggle for ratings, income, and acceptance.

Deitz's story is also a "how to" manual on confronting life head-on. Based on his own accumulation of hard-knock knowledge, he offers a good dose of street smarts, wisdom, and philosophy from which anyone can benefit.

In addition to the paperback version, the eBook version of "The Cash Cage" is now the 7th Best Selling eBook at Booklocker.com

This was pretty much the case for the rural roads through a lot of the
state. And definitely it was the case for all of the power line right of
way roads. Not an uncommon thing at all, and sadly the contamination will
outlast all of us.

This is a link to an article investigating leukemia rates in areas near AM transmitters.

http://www.wired.com/news/medtech/0,1286,64579,00.html

I don't doubt that high levels of RF can be dangerous. The first two chief engineers I worked with both died of cancer in their 50s.

Maybe they got cancer from some other cause (both smoked), but I still feel like I'm inside a microwave oven anytime I'm around an AM transmitter site.

Wouldn't FM broadcast antennas be an even greater concern? The height of most adults would make them resonant somewhere near, or in, the FM broadcast band. I'd expect energy transfer to be more effiecnt from the FM broadcast antenna to the human body than it is in the AM broadcast band.

Anyway, there's been over 80 years of kW+ levels of AM broadcasting, and it seems strange this leukemia concern has gone unnoticed until now.

Frank Dresser

The thoroughly undocumented cases (no studies of groundwater contamination, etc.) was based on the effects of stations with twice the power allowed in the US on AMs.

Low levels of AM as experienced in the US would be very different.

While I think this whole thing is just another pseudo-science scare.... It is NOT true that US stations have much lower field strength on AM. AFAIK, very few foreign stations are directional at any power. Some US 50 kW stations have pretty potent ERP in their beam. Not a megawatt, but quite a bit nevertheless.

I'm a lot more worried about teens and others I see wandering around with a cell-phone permanently attached less than an inch from their brain.

It's not the radiation. It's the hatred.

Hi Frank,

Good point but compare to asbestos causing cancer where it can take 60 years
to appear.

I also often wonder what PCs are doing to us all staring at them all day,
we may be in for a big health shock in the years to come!

Also mobiles may ruin the brain. The consequences could be disastrous.

Happy thoughts!!

Cheers

Mike

It is another one of these cases where there may indeed be a link, but
there is no assurance at all that the link is causative. For example
you can find a link between smoking and cirrosis of the liver. Many
smokers are also significant drinkers. It wasn't the smoking that
caused the problem, but the smoking and other behaviours that are
causative are often seen together. I.E. most high power AM
transmitters are in major cities, and there are significant other
hazards from things like air pollution that exist independent of the
AM broadcast facilities.

As far as those working around the equipment, I'd be more interested
in the potential X-ray exposure. The voltages used in high power

transmitter tubes produce significant X-ray hazards, and these weren't recognized for a long time.

You did an excellent job of pointing out why radio programming today has to be much more professional and research-driven than it used to be.

Back when today's "classic rock" recordings were still fairly current and the format was called "album rock", most stations had some system for identifying which album cuts were acceptable according to the station's program and music directors; but individual jocks often had considerable latitude in choosing just which cuts they played. For those who are too young to remember, the microcomputer was still in its infancy back then and AFAIK no stations were using computers to schedule music -- human beings had to make decisions as they went along.

In those days a good jock knew the station's library intimately, knew the audience nearly as well, and could find the right cut for any particular moment; we even took requests! A mediocre jock knew most of the most popular songs and artists, and seldom played anything else (except when they heard another jock play something). A really bad jock had poor taste in music (and little understanding of flow and tempo), played personal favorites, and generally stunk up the station.

A youngster who grew up listening to the music his parents liked could be a pretty goo classic rock jock. His twin who only listened to what the other kids in the neighborhood liked would need the guidance and restraint of a knowledgeable music director who uses scheduling software to preselect everything.

But if I were still programming, I'd rather hire hire either fellow oldtimers or jocks who have been in the market for several years, then allow them as much playlist discretion as they can handle. Nothing against young gypsies -- i was one myself, back in the day -- but nothing beats having real live people who know both the music and the local audience.

I'd sure think so.

On the other hand, the FM signal is radiated from an antenna atop the
tower. Stand at the base of a 300' FM tower, and you're 300' from the
thing that radiates.

At an AM station, the entire tower radiates.

The RF energy could conceivably have an effect on cell membranes and the potentials that develop across cell membranes. Perhaps some cells are more sensitive to such changes in membrane potentials and lead to higher incidences of certain diseases which in this case is leukemia.

As for not noticing the correlation for over 80 years that isn't so unusual. It really is contingent on many factors including the increase in the number of stations over the years, the increase in power over the years, the proximity of the population to RF over the years (ie. the shift from a rural to an urban population), the extent of the exposure, lifestyle and dietary changes and so on and so on. It such a case it may take quite awhile to isolate a potential causative agent and even then it wouldn't be overwhelmingly conclusive proof. Too many variables to take into account.

Regards

John Barnard

One of the issues with most FM arrays with gain is that, for many, the spacing which results in the array having gain also results in a fairly pronounced hot-spot directly above the antenna, where few people would be expected to be, as well as directly below, where technical personnel might spend a substantial amount of time. Personally, I think that the AM radiation hazards are overstated in this study, and that the issue comes more from environmental circumstances by virtue of the fact that many AM transmitter installations share the same area as other industrial concerns.

Also - most FM broadcast transmit antennas are arrays of several elements in a vertical stack to concentrate radiation in the horizontal plane. As a result the radiation directed around the tower base is much lower than the station's licensed power.

RF

Visit http://rfry.org for FM broadcast RF system papers.

Yes, but researchers can also sift through 80 years of public health records. The people who have, or had, leukemia are known. It shouldn't be hard to find out who lived near a radio transmitter and for how long. It might be interesting to ask veterinarians about animal leukemia, since many transmitters are located in rural areas.

But, since this story is being treated as news, I don't think there are even any "rural legends" about a connection between leukemia and AM radio transmitters.

Let's not forget that perfectly random chance is going to usually give us lumpy results. A perfectly smooth map of leukemia cases would be something like flipping a quarter ten times and getting exactly a h-t-h-t-h-t-h-t-h-t result. It could happen, but any lumpy combination is just as likely, and there are more lumpy combinations to go around.

Random chance alone might give us some leukemia hot spots. Some of those hot spots might be near AM transmitters. It'll be interesting to see if other leukemia hot spots are around AM radio transmitters, or if is just one of those weird number things.

Mobiles as cellphones? Yes, there's no need to do studies to observe the brain damage caused by those evil things. Just observe the cellphone addled drivers as they careen from one close call to the next. The damage is self-evident. Well, I don't need no stinkin' cellphone to damage my brain.

I'll stick with shortwave radio.

the field strength of AM radio stations is measured in volts (microvolts)
not watts.

the field strength is inversely proportional to the square of the distance.

any study that relates any form of radiation, electromagnetic or otherwise
that does not refer to quantities measurements AND duration of exposure to
some other effect such as Leukemia is worthless.

But, with rare exceptions, "DJ choice" programming ended with the
progressive stations of the late 60's. Except for, perhaps, KPIG, anyone
doing it is also losing in the ratings.

I am curious if station sign-on and sign-off announcements are required by
the FCC ?
I ask this, because I have noticed several daytime only stations recently
that do not make any type of announcement at sign-off
They just kill the carrier afer the last commercial. And they begin the
next broadcast day with programming, sometimes not even a legal ID.

Just curious about this.

George Thurman

Maybe the areas around transmitters are clear of trees. You get a lot more absorption of sunlight on your body than of any AM signal, which is much lower in frequency. Also, sunlight is a demonstrated cancer risk. Better stay in the dark.

the rules:

PART 73_RADIO BROADCAST SERVICES--Table of Contents

Subpart H_Rules Applicable to All Broadcast Stations

Sec. 73.1201 Station identification.

(a) When regularly required. Broadcast station identification
announcements shall be made:
(1) At the beginning and ending of each time of operation, and
(2) Hourly, as close to the hour as feasible, at a natural break in
program offerings. Television and Class A television broadcast stations
may make these announcements visually or aurally.

a lot of AMs are being automated. the transmitter controller is simply
programmed to shut down (and turn on the next morning) independent of
programming.

what you are hearing may be a case of nighttime power/pattern change where
you are outside the night coverage area.

often the nighttime power of former daytime stations is only a few watts

there is no requirement to announce anything when switching patterns/power

# 2044. A BETTER ALTERNATIVE FOR OLDIES THAN XM OR SIRIUS

I REALLY ENJOY LISTENING TO http://60sradio.com FOR THE FOLLOWING REASONS:

1-THE WIDEST VARIETY OF 50S AND 60S MUSIC ON RADIO

2-THOUSANDS OF COMMERCIALS FROM THE 60S

3-BETTER AUDIO QUALITY BECAUSE OF VINTAGE PROCESSING

4-GREAT PERSONALITY AND FUN

The rules, as I understood them when I cared (73.1202) was that the station ID was to be aired at the beginning and end of transmission, as well as "as close to the hour as possible in a natural break in programming." I think this is by international treaty, not that it's observed by many North American stations. The station address, contact information and national anthem, therefore, are entirely optional, abeit customary, for most stations that actually sign off. And your experience is typical.

This rule, or a variant thereof, also applies for auxiliary (Part 74) operations, such as studio-transmitter links. There, the hourly ID for the main programming serves to ID the auxiliary STL, but once programming ceases on the main programming, the STL needs to be ID'ed every hour with its own calls if it remains on. And the form for those, by the way, are quite explicit in their delivery. STL WAP-470 in Thistown is, like the requirement for the main channel's calls, to be ID'ed double-you-ay-pea-four-seven-zero thistown, not "WAP-four-seventy" or other cute variants. Keep in mind, too, that the location is the political entity of the station's STL transmitter, so that a station licensed to Thattownoverthere with studios in Thistown would ID the STL as I've described. For Remote Pickup links, the facility is to be ID'ed in exactly the same manner.

>I am curious if station sign-on and sign-off announcements are required by the FCC ?<

A legal ID is required at the beginning and the end of "each period of operation." (See 47 CFR §73.1201.) Otherwise, no announcement (such as the old statement of ownership) is required.

Good news if one is lucky enough to find where to buy a digital radio for terrestrial reception. Except for satellite radio, terrestrial digital radio is a well kept secret. There is one digital AM radio station in the NYC area, WOR 710 KHZ, and no available receiver. I get a blank stare when I ask the so-called technical expert retail guy if their store sells digital AM radios. Maybe in the future there will be an after market auto radio capable of digital AM/FM reception and short wave DRM digital reception.

And their retinas as well..... 900 mhz --- I can recall around 20 years ago (don't get on my case as to whether it was 16 or 22 or 18 years ago) but the FCC advised the amateur radio community that if you don't do something to increase your numbers, we're gonna have to start taking your VHF, UHF, microwave allocations away. This spectrum is too valuable for you to hold when your numbers are declining and you're not using them anyway.

They (FCC) discussed a codeless "communicator" license. The ARRL countered with a "Novice Enhancement" program, which satisfied the Morse Code fetish requirement, and, as it turned out, did not bring the 50,000 new hams per year into the service as they claimed it would. But anyway, IIRC, somebody's idea was to allow novices voice privileges on 902 Mhz, and it was not considered seriously , and one of the reasons cited was safety.

Right, but often times there are a large number of people living in high rise buildings near the FM antenna. It's conceivable there are more people living in a high power FM radiation area than a high power AM radiation area.

For sale:

(The "Radio Crazy" is baaaaakkkkk!) Hi!

Partial interest in AM/FM radio station in small coastal Alaska city. Lots of Summer tourists.

AM is 1 KW, non-DA, fulltime, low dial spot under 1,000 KHz. FM is class "A". There is no local radio competition.

This is a joint venture and there is an element of risk. You could lose all or part of your investment. (Legal disclaimer, "Big Brother" makes me do it! Hi!)

Active or inactive investors with at least $10,000 min. each are welcome. All investors would be on the board with full voting rights if desired. No individual can own more than 49 percent interest. This means me too!

Tel: (478)741-1710 in Macon, GA.

References:

a-My parole officer....Mr. Larson E. Rapp, c/o Zing Zing prision, Ossingstink, NY. Tel: 1-800-IMA-THUG.

b-Trade reference: Brazilian Bandit Airways, Oshkosh Airport, Oshkosh, WI. Purchased a one-way ticket to Rio using all small and unmarked bills. Don't worry, flight will be after I have the investor's money!

(References in jest, deal is for real!)

73,

Meyer Gottesman, W6GIV

Does (did) the same thing apply to TV? I remember, back in the days when most TV stations actually signed on and off, that some stations would get the legal requirement and the anthem out of the way at, say, 5 minutes before the hour, then return to test pattern until the top of the hour, at which time it would be brief, non-legal ID and then right into regular programming. Did "the beginning of transmission" have to be immediately before programming, immediately after the transmitter was turned on, or just any time before the first program of the day aired?

I guess that's the difference between being a DISK JOCKEY and an AIR
PERSONALITY.

To be honest (albeit blunt), most guys on the rock stations in 'those
days' were terrible as air personalities. Of course, there were
exceptions like Tom Donahue and B. Mitchell Reed (both of whom came
from a Top 40 background where they learned to be GREAT air performers
BEFORE they learned music).

IMHO, selecting music does not really take any talent. It takes
KNOWLEDGE and knowledge can be learned. You can't learn talent. You
either have it or you don't. How many Dan Ingram's, Robert W.
Morgan's, Dr. Don Rose's, etc. are there? Not too many as far as I
know.

Give me an air personality over a disk jockey ANY DAY! You can train
an air personality to pick music. You can't train someone with little
or no 'God-given' talent to be talented.

Just my .02.

J.J.

well as
> directly below...

---

This is true only when each element in the array has high relative field at +/-90 degree elevation, and the elements are vertically spaced about one wavelength apart. Shorter vertical spacings reduce such radiation from these arrays. Using 1/2 wave spacing reduces it to a theoretical zero at +/-90 degrees elevation (the zenith and nadir).

BUT, the great majority of FM broadcast transmit elements used today have elevation patterns with very low relative field at +/90 degrees. An array of such elements also has low relative field at +/-90 degrees -- even with elements spaced at one wavelength intervals. IOW, no hot-spots above and below the array.

Patterns of four element types in common use today, and an elevation pattern for a 6-element, 1-wave-spaced array of one type are included in the PDF slide show listed as Paper 10 at http://rfry.org.

What's really bad is.
When I called WOR up in June to ask them, "Where I could get a Digital Receiver?"
They laughed at me and said. You can go to any Best Buy or Wall-Mart to buy a radio.
I then said, "I know I can buy any AM radio. But I want to listen to WOR's digital IBOC.
Then the guy asks, "What's IBOC?". I said that High Def digital radio.
He then says No. We don't broadcast that kind of radio. You need to subscibe to Satellite radio to listen to digital radio.

I'm writing in regards to the FCC's Emergency Alert System. I am a hobbyist trying to set up a system to listen for EAS broadcasts in my area, but although I've read over the documentation on the matter (11.31, 47CFR)*, I can't figure out what the frequency to listen on should be. Can anyone offer any guidance on the subject?

Thanks,
Rob

---

Could happen in the odd case, but not usually. FM broadcast transmit antennas located on building tops normally have radiation center heights that easily clear the tops of nearby buildings. If they didn't, the station's signal would be affected by shadowing (blockage) beyond the nearby buildings, and have widespread multipath problems from reflections off the building sides. Competitive issues make this situation unlikely.

Cross-posted to: rec.radio.broadcasting,rec.radio.noncomm

CREATIVE SPECIALIST
News and Information Program Producer, Division of Broadcasting,
WILL-AM-FM University of Illinois at Urbana-Champaign (42428)

THE STATIONS: WILL-AM is primarily a news and information station with a power of 5000 watts during the day at 580 kHz. The station serves listeners in most of Illinois and half of Indiana, including Chicago and Indianapolis. WILL-FM is a classical music and fine arts station, serving listeners in east central Illinois and west central Indiana. The station broadcasts 24 hours a day with a power of 105,000 watts with an antenna 850 feet above ground. Both stations are licensed to the Board of Trustees of the University of Illinois.

THE LOCATION: The University of Illinois is located in Urbana-Champaign, which offers the advantages of medium-sized-city living (110,000 population) 135 miles south of Chicago, 175 miles northeast of St. Louis, and 115 miles west of Indianapolis. The University setting (34,000 students) provides a rich cultural environment, many sports and entertainment events, and a variety of recreation facilities. Local schools, libraries, shopping, and performing arts centers are excellent.

THE POSITION: This is a full-time, regular Academic-Professional position. Two full-time (plus additional part-time) news and information program producer's work under the News Director. The person in this position will gather, produce, present news reports; produce news feature material and create information segments on a wide variety of topics for two daily newsmagazines; and research program topics as required. Finally, the person is expected to enthusiastically and effectively participate in on-air fundraising, marketing activities, and community projects.

QUALIFICATIONS: A bachelor's degree is required (a graduate degree preferred), plus a minimum of two years' full-time experience as a news reporter and producer of feature length material for use in magazine-style information programming. Applicants must demonstrate in an audition tape the ability to present news and other information programs in a professional, unaffected, personable style. Applicants must also demonstrate they have an active interest in and knowledge of the significant events and issues that comprise the news of the day and an ability to conceive of and produce programs that reflect that insight. Ability to type with accuracy is required. Proficiency in digital audio editing is

preferred. Ability to drive a car is desirable.

SALARY AND BENEFITS: Salary for this position depends upon qualifications and experience. There are twenty-four workdays of paid vacation, plus life insurance, health insurance, ample sick leave, disability leave, a pension system, opportunities for advanced education, and other benefits.

TO APPLY: In order to ensure full consideration, application must be postmarked by September 17, 2004. Send a complete resume, a non-returnable audition tape, and the names of three professional references to the person named below. Receipt of resumes will be acknowledged. Target starting date is approximately October 19, 2004.

Tom Rogers, News Director, WILL-AM-FM
Campbell Hall for Public Telecommunication
300 North Goodwin Avenue, Urbana, IL 61801-2316

Section 11.11 The Emergency Alert System (EAS).

(a) The EAS is composed of broadcast networks; cable networks and
program suppliers; AM, FM and TV broadcast stations; Low Power TV
(LPTV) stations; cable systems; wireless cable systems which may
consist of Multipoint Distribution Service (MDS), Multichannel
Multipoint Distribution Service (MMDS), or Instructional Television
Fixed Service (ITFS) stations; and other entities and industries
operating on an organized basis during emergencies at the National,
State and local levels.

I don't think that yelling "fire" in an auditorium is a first
ammendment right. Neither do I believe that broadcasting a fire
warning when none exists, on a radio station - is a first ammendment
right. I guess you do!

It uses regular AM, FM, and TV broadcasts stations as well as NOAA weather.
There are no separate frequencies used for these--it is a "system" for
alerting the public rather than a "net" of dedicated frequencies. Two way
links or subcarriers associated with the bropadcast stations are used for
linking and there are some HF stations on the FEMA HF frequencies that have
been very rarely heard that help provide link in case wire and other links
fail. In other words, it uses already existing radio systems rather than
having its own and the local frequencies depend on the local area.

See instead
http://www.fcc.gov/eb/eas/plans.html
for your state for additional information.

All broadcast stations are required to originate a Required Weekly Test
(RWT). They are also required to relay a Required Monthly Test (RMT)
that originates elsewhere. Many stations voluntarily air other alerts
(usually weather-related) but are not required to do so.

Your local NOAA weather radio (162.4-162.55MHz) also carries these, as
well as EAS broadcasts of severe weather watches and warnings.

Hi All,

My original posting on this topic has raised a wonderful number of replies, thanks to you all, they are all very interesting..

I am convinced radiowaves are harmful, just like mobile phones, PC screens etc. Remember they thought asbestos was save until a few years ago!

Mike

Hi, I'm new to the group and I don't know where else to go because I'm looking for something really rare. I'm looking for some CBC FM airchecks, preferably late 80s, early 90s, and if any of you guys can help, please let me know. My preference is Brave New Waves. If you can assist, let me know.

Using commercially-available equipment is cheating anyway. What does it take to modify PCS cellular phone firmware for digital communication on 902? Is it just a matter of firmware or isn't the RF section able to tune that far out of band?

Therefore, smoke as many cigarettes as you want to, and if you get lung cancer, just blame it on the air pollution.

Perhaps when I walk into a fire, the blistering burns all over my skin are caused from the chemicals in the sun tan lotion I used the day before.

Voting for Nader or Badnarik is somehow taking a vote away from Kerry, but no one ever suggests Bush and Kerry drop out of the race because they are taking votes away from the other two. Ridiculous.

## 2084. TheatreRadio

Newsgroup: rec.radio.broadcasting

From: nathan@theatreradio.co.uk
Message-ID: <cgdvoa$kn7$1@xuxa.iecc.com>
Source record: 4324

Hi all,

TheatreRadio is a new site  the original online radio station for musical theatre.

Visitors will be able to enjoy music from future, current and recent musicals streamed live across the internet in association with Live365.com

Whilst listening to great music, visitors will be able to find out more about current musicals, and even buy tickets for and merchandise relating to a specific production.

TheatreRadio is an innovative and original way of making musical theatre accessible to all.

The launch is planned for September 2004.

Many thanks,

TheatreRadio

Do you really need to have people smoke cigarettes for 80 years before you agree that inhaling smoke into your lungs is going to cause health problems?

These are all basic things we should know without having to go through decades of health records to figure out.

I knew in 1983 that Aspartame was a horror, yet only now are people starting to figure that out.

> Let's not forget that perfectly random chance is going to usually give us

Same with trying to link lung problems with smoking. But can you seriously say that breathing smoke into your lungs is not going to cause health problems? Just use common sense.

> Random chance alone might give us some leukemia hot spots. Some of those
> hot spots might be near AM transmitters. It'll be interesting to see if
> other leukemia hot spots are around AM radio transmitters, or if is just one
> of those weird number things.

While you do all that, I will just avoid living next to any AM or FM radio transmitters. I wish I could do the same with Microwave Cellular towers, but that is getting impossible to avoid today.

> > I also often wonder what PCs are doing to us all staring at them all day,

LCD screens are obviously much safer and healthier than the CRT screens. Do we really need studies on that too, or can we all use common sense to figure that one out as well?

> Brother Stair used to say that the Internet was Satan's entryway into the
> home.

Satan is make-believe.

Comparing wavelengths of "people" based on their height is ridiculous. Microwaves are a much shorter wavelength and cause much more damage to the human body, so the wavelength of people based on their height theory needs to be thrown out right away.

> I'd expect energy transfer to be more effiecnt from the FM broadcast
> antenna to the human body than it is in the AM broadcast band.

This is like the argument that you should vote for the lesser of two evils, rather than vote for a good candidate.

Why choose to live near an AM or FM broadcast antenna? I would not want to live next to either. What is more annoying is how cellular telephone antennas are getting to be impossible to avoid, and new ones are being put up every week.

> Anyway, there's been over 80 years of kW+ levels of AM broadcasting, and it
> seems strange this leukemia concern has gone unnoticed until now.

80 years is only one generation of people. Give it time. Old time radio commercials have doctors endorsing cigarettes that are healthy and good for you and your throat.

Cell phones have not been in use long enough for the evidence to exist to convince those that don't have the radio background to know how dangerous they are now, without needing to see several generations of people suffer from them first.

Aspartame is only now starting to get the attention that I was aware of decades ago.

Now we have Sucralose (not sucrose) and Ace K, and again, we will have to wait around 20 years or longer before enough people have suffered to start to consider them a health threat.

How about that price too? You could get a Lif time Subscription from Sirius
Satellite Radio or 5 years of XM for that price.
The only other one I know about is the kenwood IBOC tuner. But you need a
HU to go along with it. I think It's around $800.00 total for the tuner and
HU.

This is the same theory in which people claim using their cell phones are safe, because the power they put out is so low.

They are powerful enough to transmit to cell towers miles away! Now put that power inches from your head and how more concentrated is that power?

> before programming, immediately after the transmitter was turned on, or just
> any time before the first program of the day aired?

Remember that the only "legal" requirement is the calls and city of license. And, in my (non-professional) opinion, a non-legal ID at the top of the hour, just before programming, is bogus. The ID, though, needs to be as soon as practicable after emissions start and end, as well as the aforementioned as-near-to-the-hour-as-possible (TV having the additional option that they can ID either or both the video or audio). But don't forget that the FCC really is pretty slack with this rule, where the legal ID on more than a few alt-rock stations is buried in the :50 6-minute commercial break, and then come the top of the hour (which, to me, is still a reasonable break in programming) you'll hear something like "Dumbbutts96 - your Rockin' Jockin' Joint for the Tri-State Area! (A Clear Channel Station)".

Bzzzttt!

But like I say, there are more important things for the FCC to worry about than what some stupid consultant thinks is good radio.

Huh? AM stations essentially always have vertical radiators, especially in Europe where there are so many high powered stations.

Even systems that appear to have a radiator strung between two support structures use the vertical component to do the radiation, with the flat top part being top loading. In the past, many Latin American AMs had a wire strung between two tall trees or poles... it was still the vertical feed that did most of the work... they were T's or inverted L's, but they were, simply, top loaded short verticals.

In general, AMs don't work very well otherwise.

> that far out of band?

Think of it this way. When you have an FM broadcast antenna and transmitter, it makes quite a difference when switching within the same band from 88 Mhz to 100 Mhz. (only 12 Mhz)

Now you want to take something from around 850 Mhz to 902 Mhz (52 Mhz difference)

Plus the higher up you go, the more critical the circuitry. Even in the 440 band you are already dealing with microsurgery when using the miniature surface mount components.

Besides, working with microwaves is never a good idea. Might as well just take up smoking cigarettes instead.

I would play with mercury and use lead paint in my home no problem, but I would not ever build a transmitter and use microwave frequencies.

>
> In general, AMs don't work very well otherwise.

Actually, that's absolutely true. H-Pol radiators have little to no ground wave. This is why a vertical radiator is sometimes called a "ground plane" antenna, although there's no requirement that the vertical need be on the ground. FCC rules address(ed?) those facilities which use an elevated vertical radiator (like the operation I worked at in Erie) with a suspended web of wires below (a counterpoise) which served as the "return" path...for those installations on the ground, this counterpoise is usually buried. (The rules took elevated counterpoises into account, but also said that no new such installations would be permitted...too much intermodulation caused by a typical building's structural steel joints.) Those familiar with 11-meter Citizens Band know this antenna in its 27MHz form, where rather than having radial spaced 3 degrees or less apart, three such radials at 120 degree spacing is more than sufficient for reasonable efficiency...it's a function of wavelength. (And if you're curious, the reason why this particular configuration has these radials at a 45-degree angle from the horizontal is because a ground plane antenna has an intrinsic impedance of about 30 ohms....the farther towards being vertical, the more it's like a dipole, with a dipole's characteristic 72 ohm impedance. Thus, at 45 degrees or so, the ground planes typically used for C-Band are about 50 ohms without the need for a matching network.)

The nice thing about the low radiating impedance of a vertical radiator is that the high base current necessary for a given power means that the magnetic vector is bigger than the electrostatic vector, and since ferrite loops used in most AM radios respond to the magnetic vector, the "connection" is more intimate.

This concludes your antenna theory class for the day. ;-)

Go to http://tx.mb21.co.uk/gallery/ and look at some of their AM/MW sites. Not only do many of them still use those cool T-shaped horizontal wire antennas, but in some shots you can see sheep grazing in the fields very close by. The RF foes in the USA should consult with veterinarians in the UK and see what their research comes up with

why not look it up?

you will find that a 5 watt transmitter operating on 450 MHz with a 1/4 wave
antenna might produce enough heating to damage the cornea of the eye IF the
tip is placed within one CM of the eye.

> Station)".

It's not just modern rockers--burying the legal in the :50 stop set is
common in *every* music format (it seems that talk radio still
believes in call letters over image name). Either that or whispering
what they don't really want you to hear like this example: "LITE ROCK
97! [whisper] WXXX Morton Grove [end whisper] CHICAGO'S HOME FOR
CONTINUOUS LITE FAVORITES WITHOUT THE RAP OR HARD ROCK OR SLEEPY
ELEVATOR MUSIC!" All, of course, with the overproduced whooshes and
lazer zips in the background.

Just think--all you needed in the old days was a tymp roll, Bill Drake
saying "And now, ladies and gentlemen, the Real Don Steele--on Boss
Radio!" and the Johnny Mann Singers singing "93 KHJ--Los Angeles!"
And all of that at the top of the hour. Guess times have changed.

asbestos IS safe... just dont eat it or drink it. :)

of course radio waves are harmfull, you would not want to be in a microwave oven if it was turned on.

come to think of EVERY freeking thing in the universe is harmfull. there is not one material thing in existance that you can name that cannot be used to kill.

but think about this, sense the dawn of time (or at least earth) the planet earth has been bombarded by electromagnetic radiation from the sun, stars including radio stars, pulsars, cosmic radiation, gamma ray bursters, even tornados and hurricanes are known to produce RF.

it is equally possable that mankind NEEDS RF the same as it need vitamins and sunlight to be healthy!

bet someone could get a healthy grant to study this.

The topic was: Is AM radio harmful?

Certainly my reply was not related to any physical harm which might result from radio waves themselves- but since the message board has to do with radio broadcasting in general- I thought it would be a good opportunity to inject ANOTHER TYPE OF MEDICAL HARM which I see inherent in AM broadcasting today.

I will continue to take a look at the threads in this post and see if conjecture or humorous , slightly off the subject comments are part of it. (which seems to be pretty much standard throughout google message boards.)

I hope you will show as much concern for threatening language and 4 letter words- as you did my post.

However in the future- I will do a better job at sticking to the subject at hand.
Sincerely, Mike Cohrman

To oversimplify a bit: Low frequencies (like AM broadcast) pass through
the body without being absorbed. Microwave frequencies bounce off the body
without being absorbed. It's the frequency range between 30 and 300 MHz
where maximum absorption takes place.

For sale:

Partial interest in AM daytimer in nice South Carolina city.

(The "Radio Crazy" is loose!) LOL!

This is a joint venture and there is an element of risk. You could lose all or part of your investment.

The station is in Walterboro, SC. Daytimer, 2,500 watts, nondirectional, 1000 KHz. Tower has CP to move 0.2 miles. No real estate included.

Expect the asking price to be about $125,000. This is a propering community. It is the county seat and the largest city in that county. This is the only AM in that community of about 5300.

Active or inactive investors with at least $10,000 each are welcome. No individual may own over 49 percent of the station. This means me too!

Station established in 1947.

Every government has different limits, rules and laws. So this is MEANINGLESS!

As if moving to a different country somehow makes the exposure more or less safe than being in another country.

Never go by government information.

One road along side homes in my area is 55 mph, while another road with no homes or buildings on it is 25 mph.

What does that prove? That the government is made up of bozos and idiots.

What if the government issues a statement that smoking cigarettes is good for you and gets rid of cholesterol? Would you start smoking?

>> Huh? AM stations essentially always have vertical radiators,
>>especially in Europe where there are so many high powered
>>stations. In general, AMs don't work very well otherwise.
>
> H-Pol radiators have little to no ground wave.

H-pol would not be used on VHF and above (FM/TV broadcast etc) if that was true. A linear, horizontal dipole antenna at MW or any other band generates its maximum field strength at all angles perpendicular to its longitudinal centerline -- which includes all angles from below the antenna out to the radio horizon; i.e., a "ground" wave. [Free-space radiation with respect to the dipole itself is the same whether its axis is horizontal or vertical.]

The reason h-pol is not used for MW is because path losses are much higher for h-pol than v-pol in that part of the radio spectrum.

> This is why a vertical radiator is sometimes called a "ground plane"
> antenna, <snip> for those installations on the ground, this counterpoise
> is usually buried.

The radial ground system used with MW broadcast antennas reduces antenna system losses (I^2R), and keeps maximum radiation directed more toward the the horizontal plane, rather than at some elevation angle above the horizontal. The FCC defines the minimum efficiency of radiators licensed for MW broadcast in terms of producing a field strength of so many mV/m at 1 km from the antenna, per kW of antenna input power. These efficiencies cannot be met without using a good ground system.

>Those familiar with 11-meter Citizens Band know this antenna
>in its 27MHz form, <snip> the reason why this particular configuration has
> these radials at a 45-degree angle from the horizontal is because a ground

ohm
> impedance. Thus, at 45 degrees or so, the ground planes typically used
for C-Band
> are about 50 ohms without the need for a matching network.)

Possibly more important is the point that drooping the radials also tends to lower the angle of maximum radiation, which can improve field strength for receiving antenna sites at/near ground level.

> The nice thing about the low radiating impedance of a vertical radiator is that the
> high base current necessary for a given power means that the magnetic vector is
> bigger than the electrostatic vector, and since ferrite loops used in most AM radios
> respond to the magnetic vector, the "connection" is more intimate.

?? The table below shows the efficiencies for MW vertical radiators with a good ground system. The self-impedance of a 90 degree vertical is about 50 ohms, and for a 180 degree vertical it is over 100 ohms. So for the same input power, base current is lower in a 180 degree radiator than in a 90 degree radiator. Yet the efficiency of the 180 degree radiator is higher -- the opposite of the above quote statement.

The ground wave field strength of a MW vertical radiator per kilowatt of input power is related only to the current distribution in the radiator, not its base impedance. Whatever the base impedance is, it can be matched to 50 ohm line at the tower base, using the right network. But the network doesn't affect the relative field radiation pattern of that radiator.

AM Radiator Efficiencies, 1kW input
(for equal distances)

Twr Hgt, Deg Effic
70 182mV/m
90 190
100 195
180 237
190 246
225 274

Note here that "efficiency" is the FCC definition for MW broadcast. Efficiency falls for short radiators because the ohmic loss even in the best ground system becomes a bigger percentage of the resistive term of the radiators base impedance.

IBOC -- a way to jam skywave signals from Mexico and Canada at night, just like the USSR did with VOA, RFE/RL, ...

The US AM band is so heavily overallocated already to meet the classical cold war definition of jamming, with respect to being able to hear stations in Canada during nighttime hours (no Canadian station operates at 50 kW at night that I am aware of).

The big change came with the digital dial. You can not be "93" anymore, you must be 930. In some formats, especially in youth and younger adults, up to 80% of Arbitron diary mentions are by digital dial position. The next group is by name, and the lowest by calls.

Mark Jeffries <uncamark41@hotmail.com> had written:
|
| It's not just modern rockers--burying the legal in the :50 stop set is
| common in *every* music format (it seems that talk radio still
| believes in call letters over image name). Either that or whispering
| what they don't really want you to hear like this example: [...]

I guess the San Francisco Bay area is a little different...KOIT,
KFRC, KDFC, KBLX, KFOG, and KMEL are all examples of music stations
that continue to identify with their call letters. Until its
makeover as "The Bone" about four years ago, KSAN did as well.

Back when KITS still was owned by Entercom, running a true modern
rock format, it only announced the call letters once per hour. But
when they did it, it was not hidden. My favorite was (in
alternating left and right channels) "K -- I -- T -- S" followed by
an equally dragged-out "San Francisco! Live! 105!"

The present-day Live 105 has none of the imagination and flair of
what came before it. Yet another consultant-whipped PD strikes again.

| Just think--all you needed in the old days was a tymp roll, Bill Drake
| saying "And now, ladies and gentlemen, the Real Don Steele--on Boss
| Radio!" and the Johnny Mann Singers singing "93 KHJ--Los Angeles!"
| And all of that at the top of the hour. Guess times have changed.

Music stations also didn't hate news in those days. It was viewed
as a complementary part of the format. Try to imagine "The Big 89"
(WLS) without Lyle Dean.

--
Mark Roberts |"The same sort of moral cowardice that led him to support the
Oakland, Cal.| Vietnam war but decide it wasn't for him, run companies into the
NO HTML MAIL | ground and let others pay the bill, play gutter politics but run
for the hills when someone asks him to say it to their face,
those are the same qualities that led the president to
lie the country into war, fail to prepare for the aftermath
and then refuse to take responsibility for any of it when
the bill started to come due." -- Josh Marshall

# 2121. Question about Sirius Satellite Radio Antenna Install

Newsgroup: rec.radio.broadcasting
Date: 2004-08-27 01:44:53 UTC
From: bluerhino1105@hotmail.com
Message-ID: <cgm3ml$a6k$1@xuxa.iecc.com>
Source record: 4260

I got Sirius Satellite Radio installed in my car on Monday at Circuit City. The guy working in the garage told me that, instead of mounting the antenna on the roof of the car, he was going to mount it on the dashboard. He told me that by doing so, he was doing me a favor because if he mounted the antenna on the roof, it would rip off the paint if I ever wanted to remove it, and that you get the same reception with it mounted on the dashboard anyway.

Since Monday, I've noticed that the signal has been less than stellar in many parts of town. I'm getting a lot of mild static, which is especially noticable on the talk stations. I've tried playing with the frequencies to no avail.

I'm wondering if the Circuit City technician was feeding me a line of BS in order to save himself some work. Can anyone offer any advice or information on this? Never having had satellite radio in my car before, I don't have anything to compare the signal to, in order to know if this is how it should sound or not.

Thanks.

# 2122. Amateur Radio Newsline™ Report 1410 - August 20, 2004

Newsgroup: rec.radio.broadcasting
Date: 2004-08-27 01:44:55 UTC
From: radionews@aol.com
Message-ID: <cgm3mn$a6s$1@xuxa.iecc.com>
Source record: 4261

Amateur Radio Newsline™ Report 1410 - August 20, 2004

Amateur Radio Newsline report number 1410 with a release date of Friday,
August 20th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio is ready as Hurricane Charley comes
ashore. Find out the details on Amateur Radio Newsline report number
1410 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO AND HURRICANE CHARLEY

Packing 145-mile per hour winds Hurricane Charley slammed into west-central Florida, ravaging oceanfront homes and trailer parks, tearing apart small planes and inundating the coast. More than a half million customers were left without power or telephone service statewide. Damage
was especially heavy in downtown Punta Gorda on Charlotte Harbor.
Warren Elly, W1GUD, is a Tampa based TV reporter sent to cover the aftermath of Charley coming on shore:

--

Audio report only. Hear it in mp3 audio in the current newscast posted
at http://www.arnewsline.org/quincy

--

Warren's report was filed early Monday the 16th. Since then President
George Bush has declared some sections of Florida as a major disaster area. His brother, Florida Governor Jeb Bush, projected damage from Charley could exceed 15 billion dollars, but that estimate was preliminary. (ARNewsline(tm))

**

RESCUE RADIO RULES: FCC CLARIFIES EMERGENCY DECLARATIONS

The FCC has issued what amounts to a white paper to clarify the rules
hams must follow when providing communications during an emergency.

Amateur Radio Newsline's Mark Abramowicz, NT3V, is here to sort it all
out:

--

With the hurricane season upon us and wildfires and other severe weather
hitting various parts of the nation, the Federal Communications
Commission believes now is the time for a clarification on Emergency
Communications Declarations.

What is an Emergency Communications Declaration or ECD?

When a natural disaster or accident interrupts or disrupts normal
communications systems in a particular area, the FCC - at the request of
emergency management officials or an amateur radio operator acting on
behalf of emergency officials - issues an Emergency Communications
Declaration.

Essentially, the order defines special conditions and special rules to
be followed by amateur radio stations providing service during the
communications emergency in that particular area.

The FCC says occasionally, it receives requests for Emergency
Communications Declarations before a hurricane or tropical storm hits.
The FCC says such requests generally arrive anywhere from 24 to 72 hours
in advance of weather predictions citing potential damage to a
particular area.

But under Section 97.401(a), emergency communications before an event
CAN be established to meet essential needs of a community or to help
prepare relief activities. The commission acknowledges preparations to
meet a disaster may overload or damage normal communications systems so
it allows amateur stations to make emergency transmissions at any time
prior to or even during a disaster.

In essence, the FCC says there's no need for an ECD because the actual
event disrupting communications has not occurred.

So, the FCC says such declarations WILL NOT be issued until AFTER the
disaster disrupts normal communications in a geographic area subject to
FCC regulation.

Speaking of emergencies, it doesn't necessarily have to be a weather-related incident, as we found on September 11, 2001. It can also be a transportation accident such as a railroad incident or a fire or explosion.

Whatever the emergency, once communications are disrupted, the FCC says there are only two sources from which it will accept an application for an ECD. The first is an emergency management official responsible for communications in the affected area. The second is an amateur radio operator acting at the request of an emergency management official.

The FCC says such applications must contain very specific information such as:

- The date the event has taken place.
- The nature of the disaster.
- A description of the communications system disrupted and a contact person who can verify the damage.
- The geographic area affected - city, county, state or region.
- Listing of the VHF/UHF, MF or HF frequencies to be used during the emergency.
- An estimated time the disruption of normal communications is expected to last.

The FCC says an Emergency Communications Declaration will contain an expiration date. However, the commission says that date can be extended at the request of the emergency official or authorized party making the original request.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The FCC's Communications and Crisis Management Center is the place where Emergency Communications Declaration requests are sent. You can reach them by phone at 202-418-1122, that's 202-418-1122. FAX requests are handled at 202-418-2813, 202-418-2813. Or, you can make the filing by e-mail to comm(hyphen)ctr@fcc.gov. (ARNewsline (tm))

**

EMERGING TECHNOLOGY: AUTOMATING EMERGENCY ALERTS

A new technology soon to debut in 12 states will significantly extend Amber alerts, reaching cell phones, e-mail and handheld computers. It could also be used to transmit weather and terrorism alerts.

According to news reports the system uses a simple broadcast technology that takes the information from a Web portal and reconfigures it for different types of broadcast. By way of example, a state department of transportation might receive it in one format for its road signs and another for its information number.

More important, people with cell phones can sign up to receive Amber alerts with their local county or with state authorities. The text of an alert can be sent immediately to local TV news stations and Web sites.

RADIO RULES: INTERNET LINKING IN THE UK

Telecommunications regulators are about to make ham radio internet linking a lot easier on the other side of the Atlantic. This, as Ofcom which is the U-K equivalent of our FCC issues new and more liberalized rules. RSGB news presenter Jeramy Boot, G4NJH, has more:

--

Ofcom has announced the decisions it has taken about changes to the procedure and terms of issuing Notices of Variation (NoV) for Internet Linking Gateways.

Ofcom proposes to pass the Internet-linking NoV process to the RSGB to issue NoVs on behalf of Ofcom. The RSGB will be announcing procedures for NoV renewal shortly and queries on the renewal process should be directed to the Society.

Ofcom's decisions were made following the notification of four proposals
which gave those holding an NoV the opportunity to make representations.

Jeramy Boot, G4NJH, in Nottingham.

--

For those interested the complete set of new U K Internet linking rules
is on line at http://tinyurl.com/4LE8P (GB2RS)

**

RADIO RULES: VANITY FEE REMINDER

Back here in the USA, a reminder from the FCC that the new Amateur Radio
vanity call sign fee of $20.80 for the 10-year license term became effective on Tuesday, August 10th. Not on Friday, August 6 as we and and others had announced.

The reason for the last minute change? A management-level staffer in the FCC's Office of Managing Director explained to the ARRL that the Commission was not necessarily bound by the August 6 effective date The
Federal Register indicates. That date was 30 days after publication of
the order containing the new fee schedule. (ARRL, FCC)

**

ENFORCEMENT: NO LICENSE - STAY OFF THE AIR

Meantime the FCC has written to a pair of unlicensed operators telling
them to stay off the air. The agency's Daryl Duckworth, NNZ0W, explains:

--

Duckworth: A warning notice went to Rick Shepherd of Crescent City, California for unlicensed operation on 146.515 MHz along the Oregon/California border aboard the fishing vessel Sunset.

David Shoemaker of Sebina, Ohio, also apparently not in the FCC Licensing Database was issued a warning notice for unlicensed operation
from a vehicle with license plates registered in his name. The transmissions were on 28.085 MHz near the intersection of I-71 and U.S.
36.

--

Shepherd and Shoemaker were both told that operation of radio transmitting equipment without a license is a violation of Section 301
of the Communications Act of 1934. They were also informed that continued operation could lead to fine or imprisonment, as well as seizure of any non-certified radio transmitting equipment that they own.
Monetary forfeitures for unlicensed operation normally range from $7,500
to $10,000. (FCC, RAIN)

**

RADIO RULINGS: FCC PERMITS SAN JOSE STATION TO BUILD SAN FRANSCISCO TRANSMITTER

The San Franscisco Chronicle reports that thousands of people in and around San Francisco will be able to watch NBC television over the air
again. This, courtesy of a Federal Communications Commission ruling on
Thursday, August 12th, that will let KNTV build a new transmitter to cover the area.

According to the news story, the San Jose based station will be permitted to construct a new transmitter atop San Bruno Mountain which
overlooks San Francisco. The station claims this site will reach 400,000 people who lost service when KNTV became the Bay Area's NBC affiliate in 2001. (FCC, San Franscisco Chronicle and other published
news stories)

**

NAMES IN THE NEWS: ANOTHER OPERATION FROM IRAQ

Even as the military action in Iraq continues another ham radio stAtion
has come on the air from that war torn region. This, word that Ryszard
Nowakowski, SP8HKT has been licensed to operate as YI9KT.

Ryszard will be there for five months. He uses a 100 watt radio into a
vertical antenna on all bands from 40 to 10 meters. He operates mostly
on C-W but will come onto SSB if you make the request. (GB2RS)

**

NAMES IN THE NEWS: NEW QCWA OFFICERS ELECTED

Former FCC rules man John B. Johnston, W3BE, is the new President of the

Quarter Century Wireless Association. Also elected are Vice-
President
Bob Roske, NOUF: Secretary Alan Pickering, KJ9N and Treasurer Frank
Harris, WA4PAM

Elected to serve as QCWA Directors are Tom Atkins, VE3CDM: Harold
Chase,
W1EES: Lew Gordon, K4VX: Jerrel Jones, W5TUU; Ray Minichello, W1BC:
Len
Nathanson, W8RC: Blanche Randles, W4GXZ, and Ed Yoder W3YMB.

Both Gordon and Nathanson are former Directors of the ARRL. 2307
QCWA
members returned ballots in this years election. (QCWA)

**

EVENTS: 2004 QCWA NATIONAL CONVENTION IN OTTAWA

And speaking about the QCWA. word that the organization will hold its
2004 international convention in Canada. The dates are October 15th
through the 17th at the Lord Elgin Hotel in Ottawa.

This years gathering is hosted by the National Capital Chapter 70.

**

ON THE NET: LINUX CONTINUES TO GROW

The use of the Linux operating system especially among experimenters
including ham radio operators is quietly growing. One in five
servers
sold last year to handle Internet traffic and corporate networks ran
on
Linux.

Observers say that the economic downturn may be responsible for the
Linux move. The Linux operating system was created as the people's
software, free and open for everyone to use in an attempt to thwart
the
commercialization of all Internet technology. Amateur radio was

among
tgher first to truly embrace it and may ham radio applications are
written for Linux based operation. (Published news reports)

**

HAM RADIO IN SPACE: NASA CELEBRATES ISS AT MARINA AIR FAIRE

Scott Avery, WA6LIE, reports over the AMSAT mailing list that NASA
will
have a booth set up at the Marina Air Faire in Marina, California
on
October 16th. Scott says that the plan is to make a live I-S-S voice
contact and to also have a video of Q-S-O's made with the space
station
playing for passers by to see. Scott adds that any help in getting
video files of school contacts with the I-S-S would be appreciated.
For
more information please contact him by e-mail to wa6lie@msn.com
(WA6LIE)

**

WORLDBEAT: LIGHTHOUSES OF AUSTRALIA 2004 ANNUAL DINNER WEEKEND

Turning to news from around the world, word that this year's
Lighthouses
of Australia Dinner will be held in Launceston, Tasmania Saturday,
October 2nd. The dinner will include a tour to the National Archives
Office Exhibition on Australian Lighthouses titled "Beacons by the
Sea."
Also scheduled is a visit to the Low Head Light and the Pilot Station
Maritime Museum also at Low Head the same weekend. (WIA News)

**

WORLDBEAT: RADIO CLUB GETS GRANT TO TEACH THE HOBBY

The Thornton-Cleveleys Amateur Radio Society in the United Kingdom
has
recently received a grant of close to 5,000 British Pounds. This, to
help in the promotion of amateur radio. Over the past two and a half
years the club has held 18 examination classes with 150 passing the U-
K
Foundation class ham radio license exam. (GB2RS)

**

WORLDBEAT: GB4WTA COMMEMORATING THE UK WIRELESS TELEGRAPHY ACT

GB2RS reports that Ted Moore, G7AIR, and members of the Eddystone
Users
Group will operate as GB4WTA on Sundays and some Saturdays through
the

28th of August. The station commemorates the centenary of the United Kingdoms Wireless Telegraphy Act, which came into effect on the 15th of
August 1904. GB4WTA will operate from Wireless Hill in the Rutland area. (GB2RS)

**

DX

In D-X word that K4QD will be QRV August 16 to 27 portable HH4 from. This, from the Northwest Christian Mission in Haiti. Activity will be
on most H-F bands plus 6 meters, using CW and SSB as time permits. QSL
to his home call. (K5SW via VHF Reflector)

And GB6LOP is a special events station that will take to the air to celebrate the 60th Anniversary of the Liberation of Paris during Word War 2. The station will operate on all modes, starting August 25th and
will be on for 4 weeks. Your QSL card will be required beforehand in order to receive the special QSL from this station. Please QSL via RSARS
QSL Bureau. For further information contact G0SWY by e-mail to G0SWY@aol.com (G0SWY)

And also listen for HS7-B on from Thailand. This special event call sign has been issued to celebrate the Queen's 72nd birthday. The call sign will be in use during any SEA NET activities. QSL via operators' instructions. (RSGB)

**

THAT FINAL ITEM: THE BIG T-HUNT: HOW THE U.S. NAVY KEEPS TRACK OF EARTH
ORBITING SATELLITES

The U.S. Navy has built an exotic radar system to track earth orbiting
satellites, and the system has been in place for many years. Now, thanks to a couple of sleuths, details of the Navy's system have been posted on the web. Amateur Radio Newsline's Bruce Tennant, K6PZW, has
the details:

--

The Navy's satellite tracking system appears to consist of multiple transmit and receive sites across the U.S., and one of the receive sites
just happens to be located in San Diego County a few miles north of Brown Field. This, according to web-published coordinate data as

reported in the CGC Communicator broadcast industry newsletter.

And if think UHF moon bounce antennas have gain, wait until you see the
giant array built near Lake Kickapoo, Texas. This two mile long antenna
transmits continuously on 216.98 Mhz with an unmodulated carrier and has
a beamwidth of only 0.02 degrees in one plane. So powerful is the
transmitted signal that when the moon passes through the beam, the
return echo is said to be detectable on earth with only a dipole antenna
attached to a receiver. Talk about the ultimate E-M-E.

For the Amateur Radio Newsline, Im Bruice Tennant, K6PZW, in Los
Angeles.

--

If all this is fascinating and you want to learn more, take your web
browser over to:
http://www.gate.net/~tomk/navspasur/navspasur5.html
and

Two questions: First, which Sirius radio did you have installed? If it's an FM modulated unit,
you may just be tuned too closely to the frequency of a local (likely NPR or religious translator) station.
Second, I think the Circuit City tech was feeding you a line. I've had two XM radios installed at
Circuit City and both times the antenna was mounted on the roof of the vehicle near the tail gate -
both are SUV's. Furthermore, most of the Sirius and XM antenna are magnetic mount - meaning they
won't harm the paint.

Since both Sirius and XM are digital services, poor signal is really almost meaningless - it either works fine
or it totally drops the audio altogether due to packet loss. You really shouldn't hear "static" unless you have
one of the FM modulated unit and then there's some other RF force at work.

HTH,

Jeremy

# 2124. Re: Is AM Radio Harmful?

>> in
>> Europe where there are so many high powered stations.
>>
>> In general, AMs don't work very well otherwise.

> This concludes your antenna theory class for the day. ;-)

Very interesting discussion. Thanks.

How about introducing the masses to franklin antennas, such as the system
still in use at KFBK in Sacramento. I believe KDKA once had one, too. I saw
one in South America that had no real ground system, just the two elements
of the Frnklin and a ground mat at the base.

========== FEATURED SPONSOR ==========

Broadcast Electronics

HD Radio. Guaranteed.

This year, you might implement HD Radio(TM). Or you may upgrade your analog plant and go HD Radio later. Either way, you want to buy confidently, without the risks of rapid obsolescence or unpredictable expenses. That's why BE makes this guarantee: Any AM or FM transmitter you buy from BE today will be compatible with your future HD Radio plans. And you'll get a firm price quote, valid for three years, on BE HD Radio gear. Contact BE today for details:

# 2126. Re: Question about Sirius Satellite Radio Antenna

Newsgroup: rec.radio.broadcasting
Date: 2004-08-27 18:13:32 UTC
From: jfiglio1@nycap.rr.com
Message-ID: <cgntkc$bhp$1@xuxa.iecc.com>
Source record: 4269

Sirius strongly recommends that the antenna be mounted on the roof (or trunklid if roof is not practical) so as to have the widest possible "view" of the sky. Having said that, Circuit City also installed my antenna inside the vehicle on the rear deck. My car is a 2000 Nissan Maxima which has an especially raked rear window that gives almost as much of a sky view as placing it on the roof. I also have a Kenwood Here2Anywhere unit that I use on business trips in the company vehicle which is a Ford Taurus wagon. I just throw the antenna up on the dash.

In both scenarios, I experience generally fine reception unless I spend more than five seconds under an overpass or I'm driving in an especially wooded area with a thick canopy of trees overhanging the road. I never get any static. Either the signal is there full on or it's not--that's the way it is with digital.

If you are getting static with this installation, there can be only two reasons for this IMHO--(1) the installation itself is faulty; or (2) assuming you are using a unit that plays through an FM frequency on the radio, the frequency you are using has a local or strong signal using it. If (2), you'll need to play through one of the alternate frequencies not so occupied.

Absent that, Circuit City guarantees its work, so I would go back to them and have them correct the problem.

There are plenty of Canadian stations that run at 50kW. CKLW in Windsor, for one. CBU in Vancouver, as well as CBC stations in Regina and Winnepeg, too (although they've divested themselves of the 740 and 940 kHz operations in Toronto and Montreal). There are still quite a few Canadian Clears, although some of those channels, like 800kHz, are shared with Mexico, and thus run lower power or directional patterns at night.

## 2128. Antenna Theory

Newsgroup: rec.radio.broadcasting
Date: 2004-08-27 18:13:34 UTC
From: Bob Haberkost <cbclistener-really!-@canada.com>
Message-ID: <cgntke$bi7$1@xuxa.iecc.com>

H-Pol is used on VHF, such as TV and FM, not because there's no ground wave (which there still isn't) but because, in historical times, the antennas used to receive TV and FM were H-Pol (most still are, if you look around). However, vhf broadcasters (you know?) have been allowed to used V-Pol (to the limits of the H-Pol authorisation) or elliptical or C-Pol as well since the early 70s, due to the number of portable receivers coming into use at the time whose antennas are, frequently, vertically-oriented. And while all dipole radiators have the characteristic radiation pattern you describe, this isn't a "ground" wave since there's no bias for radiation along the horizontal plane when the radiator is oriented horizontally - it's only when this radiator is vertical that the omnidirectional radiation perpendicular to the centreline is a "ground" wave, as significantly less power goes skyward, in conformance with your description. Further, since medium wave radiation has a significantly larger wavelength when compared to the size of the earth, the diffractive effects make for over-the-horizon transmission, further enhancing the phenomena called "ground wave propagation".

> The reason h-pol is not used for MW is because path losses are much higher
> for h-pol than v-pol in that part of the radio spectrum.

And, as noted above, because for the same amount of coverage, more power would be necessary, since well over half of the radiated power goes uselessly skyward.

> > This is why a vertical radiator is sometimes called a "ground plane"

Right....but how is this information inconsistent with my description, which is to say that a vertical radiator needs a ground plane? You also fail to note that the rules specify different minimum efficiencies for differring antenna lengths.

> > Those familiar with 11-meter Citizens Band know this antenna

> Possibly more important is the point that drooping the radials also tends to
> lower the angle of maximum radiation, which can improve field strength for
> receiving antenna sites at/near ground level.

Perhaps. But isn't it interesting that the angle selected is the same angle as what produces a 50-ohm impedance? If the effect were more pronounced at a different angle, one would think that that angle would be preferred, and then using a matching network, bring it back to 50 ohms. Of course, there would be some loss in that network, which might overwhelm the additional advantage gained by dragging down the lobe.

> affect the relative field radiation pattern of that radiator.

But....I've seen (and fortunately NOT had to deal with) antenna systems with very high base impedances (one, if my memory serves me correctly, was 800 ohms! Not much current, but do the math...any appreciable power, like 3 or 4 kW, and there's a real danger of getting tangled in with some pretty high voltages). While it's not a scientific survey, I can tell you that those systems, watt-for-watt, perform worse than lower impedance systems, and that's not even counting the difficulties in having

1kV base voltages!

And it's more than just current distribution that affects efficiencies. It's the integral of the loop currents, which is why your chart shows better efficiencies for those taller radiators. The larger fields generated by the longer radiators makes for more power transferred (which also explains why a taller radiator has a higher intrinsic impedance, as you have above, so 1kW into a 90 degree stick will be about half as effective as a 180 degree stick (actually, shy of twice, due to the I-squared-R losses you mention..

> AM Radiator Efficiencies, 1kW input

> Twr Hgt, Deg Effic
> 70 182mV/m
> 90 190
> 100 195
> 180 237
> 190 246
> 225 274

> Note here that "efficiency" is the FCC definition for MW broadcast.
> Efficiency falls for short radiators because the ohmic loss even in the best
> ground system becomes a bigger percentage of the resistive term of the
> radiators base impedance.

I appreciate the effort and time you've made trying to teach me something about antenna theory, but be assured that there's not much more that need to know, and I sincerely doubt that going into much more detail than this is warranted for this particular thread.

Among the Clear Channel stations, this stands out like a token black
at a KKK meeting. Given the politics of Clear Channel, I suspect that
KLSD is a piece of black propaganda intended to discredit Democrats,
liberals, and progressives. The call letters are a tip-off. It's like
setting up a fake organization called "Terrorists for Peace" or
"Pedophiles for Sex Education."

Either that, or the FCC has been leaning on Clear Channel about
"balance."

Is anyone familiar with these "personalities?" Do they make sense, or
are they just a bunch of left wing-nuts trying to balance a bunch of
right wing-nuts?

Mike T., Canadian observer fascinated by US politics & media.

You'll get your best answers at the independent Sirius users' forum,
www.siriusbackstage.com .

But in my opinion the installer was simply saving himself some work finding
a route through the car and underneath the rear window lip. I actually did the
dashboard thing for a few months, taking my complete Sirius setup into the car
for longer trips. It was surprisingly reliable, but the rooftop mount does
reduce dropouts.

And the flat rooftop antenna is magnetically attached; the magnet isn't
strong enough to pull paint off, but you may dull a newer finish if you're
careless with a snow brush, as the antenna grips firmly but goes where you push
it.

For sale:

Partial interest in two AM stations under same roof in
small Alabama city.

(The "Radio Crazy" is baaaaakkkk!) Hi!

This is a joint venture and there is an element of
risk. You could lose all or part of your investment.

Active or inactive investors with a min. of $20,000
each are welcome. All investors would be on the board
with full voting rights if desired. No individual can
exceed 49 percent. This means me too!

Asking price for the two competing stations (Under one
roof) is $250,000 including the main building and the
tower land for one of the stations. The other tower
site leases for $200.00/month. One AM is a daytimer,
the other is fulltime. The fulltime is CQAM AM stereo.

I once worked with a guy who claimed he could hear microwaves. He said
that he could tell when the radar system was in operation and when it
wasn't by the sound. We did a simple blind test up on the roof, and it
became pretty clear that he could tell.

Turns out that what he was hearing was conducted noise from his skull
expanding due to heating effects. Admittedly this was with well over a
megawatt ERP. But it was definitely being absorbed.

SOME microwave frequencies get absorbed very well by water, some do not.
The body being mostly water, this is as relevant as it is for weather radar.

>I'm wondering if the Circuit City technician was feeding me a line of BS in order to save himself some work.<

Of course he was. Satellite radio is strictly line-of-sight. Placing metal between the antenna and the satellite guarantees reception problems.

It belongs on the outside of the car. Period.

At medium wave (AM Broadcast) many Class A stations (formerly "clear channel") use antennas of about 190 or 200 degrees tall. The FCC requires a minimum antenna effectiveness for that class which is higher than for the other classes of stations. The base impedance of these sticks near a half-wave tall is going to be pretty high - and all but one US Class A station run 50 kW. One of the factors in deciding AM tower height is to place the first null in the vertical pattern such that the nighttime skywave interferes as little as possible with the ground wave toward the edges of the groundwave coverage.

Of course Class A AM stations are a Big Deal and generally have very good ground systems.

The better stations elected to do news well, since not doing it was not an option under the regulations then governing the industry. But most of them were pretty much rip 'n' read operations with no real staffing even then.

Quoth "Mike T." <miket@invalid.net> in news:cgntkf$bia$1
@xuxa.iecc.com:

> Among the Clear Channel stations, this stands out like a
> token black at a KKK meeting.

Not at all. Air America is making money for Clear Channel in the markets where they have tried it (most clearly in Portland OR on KPOJ -- they put it on WINZ in Miami in mid-July, still too early to tell what's happening there), so they are expanding it to several of their other underperforming stations (like KLSD -- stands for Liberal San Diego, despite the obvious double meaning) and WLBY 1290 Ann Arbor, Michigan (short for "libby"). They say they plan on introducing it into two more top 25 markets over the next month, but haven't said where yet.

It may provide them with some political cover as a side benefit, but Clear Channel, like most big corporations, is primarily about Making Money. They see an under-served market and they are determined to serve it.

> Is anyone familiar with these "personalities?"

I've been listening since May to Air America's flagship, WLIB, so I'm familiar with the Air America lineup. Their personalities are genuine, mostly entertaining (for example, Marc Maron has long been one of my favorite political standup comics, and his approach and material fit well on radio; to my mind, Al Franken makes me think of what Arthur Godfrey might have been if he were Jewish; Chuck D is impressive when he's there; Garofalo impresses, but her sidekick Sam Seder usually just annoys me; and Randi Rhodes just KILLS) and make a lot of sense, some more than others. You can sample them yourself no matter where you are; Air America streams both Real Audio and Windows Media at AirAmericaRadio.com

I don't know Ed Schultz (not an Air America personality -- he's syndicated by Jones Network) but I hear that he used to be a little-known conservative talker who intentionally turned himself into a liberal version of Rush Limbaugh so as to stand out from the crowd.

"Bob Haberkost" wrote these clips:

>The larger fields generated by the longer radiators makes
>for more power transferred (which also explains why a taller
>radiator has a higher intrinsic impedance,

Have to disagree with that. The reason that a 180 degree MW vertical generates a stronger ground wave than a 90 degree vertical (other conditions equal) is due SOLELY to the shape of their respective elevation patterns. Their radiation efficiency or "power transferred" has nothing to do with their base impedances.

If properly matched to their transmission lines, both of them radiate the same total power. But the elevation pattern of the 180 degree radiator has more intrinsic gain in the horizontal plane -- which produces the stronger ground wave of the two.

>so 1kW into a 90 degree stick will be about half as effective
>as a 180 degree stick.)

Not following that conclusion. Using the FCC's numbers, a 180 degree MW radiator with 1 kW input produces a groundwave field of 237 mV/m at one mile, while a 90 degree radiator produces 190 mV/m. So for same input power and other conditions, the 90 degree radiator produces 80% of the field strength of the 180 degree radiator.

Put another way, the input power to the 90 degree radiator would have to be increased about 1.56X in order to produce the same ground wave field at one mile as the 180 degree radiator.

Hi all. I've been doing an internet radio show for over a year now, but yesterday, tried the "talk" genre. Have a listen and see what you think. The "talk" part of the show lasted about 45 mins, and starts about 15 mins from the beginning of the show.You'll find it by going to my site - www.chrisreardon.co.uk look to the left and click Radio Shows . Then select the show Friday 27th August 5pm - 6pm Part 2 (All chat from 5.15pm)
Thanks for listening and let me know by email what you think.It was nerveracking not relying on a track,but I did a load of prep and this of course helped.As usual, I didn't get through all the prep ! Ah well, better too much than too little !
thanks.
Chris

What possible interest would anyone in the US have in listening to a radio station form Mexico, unless they live on the border and the Mexican station is attempting to serve both sides. Otherwise, Mexican AM stations are programmed to serve very local audiences within Mexico.

Wanada has a number of protected channels, where such stations can be heard well into the US. But, like the Mexican stations, there is not much interest in local Canadian affairs in the US.

>
> Why not PROVE your ridiculous theory by putting your head into a microwave oven!

I said this was a simplification. The point is that maximum absorption
occurs in the 30 to 300 MHz range. Microwave frequencies are used for
cooking because they are more practical to produce, not because they
are more effective at heating.

See the ANSI (American National Standards Institute) exposure limits
curve below:

http://www-training.llnl.gov/wbt/hc/NonIonizing/gif/slide34lg.gif

Greatest rf absorption (minimum allowable exposure) is in the 30 to
300 MHz range.

Amateur Radio Newsline=E2=84=A2 Report 1411 =C2=AD August 27, 2004

Amateur Radio Newsline report number 1411 with a release date of=20
Friday, August 27th, 2004 to follow in 5-4-3-2-1. =20
=20
The following is a Q-S-T. A ham radio operator looses his house and=20
tower in a fire and an urban terrorist is the suspect. Also,=20
interference to a ham could lead to a fine for an uncooperative=20
neighbor and lots happening on the B-P-L front. Find out the details=20
on Amateur Radio Newsline report number 1411 coming your way right=20
now.

(Billboard Cart Here)=20
=20
**

ALL POINTS BULLETIN: ARSONIST BURNS DOWN HAMS HOUSE

An arsonist with a grudge against radio has burned down the home of a=20
Vancouver, Washington ham. Amateur Radio Newslines' Mark
Abramowicz,=20
NT3V, has the details:

--

A $10,000 reward is posted and the Clark County Fire Marshal's office=20
is tracking any and all leads it hopes help them capture someone who=20
has been setting fire to communications towers in the Vancouver area=20
since the beginning of the month.

Until recently, investigators say the targets have primarily been=20
state government, telephone company and cellular telephone towers.=20
But it was an Aug. 20 fire at the home of John Stein AB7F that now=20
has alarmed the ham radio community in Vancouver.

The fire marshal's office says Stein's amateur radio tower was=20
apparently targeted. It believes the fire was set at the base and=20
spread upward along the feed line. Flames fell from the melting=20
cables and spread to Stein's home.

Fortunately, authorities say, Stein was awake when the fire broke out=20
about 11:30 p.m., got out, called 9-1-1 and tried to get a start on=20
putting the fire with a garden hose. But the fire took off quickly=20
and, unfortunately, the home sustained extensive damage in excess of=20
$50,000.

The fire marshal's office says Stein told them he spotted somone=20
running away from his home and he gave them a description.
Clark County Deputy Fire Marshal John Dunaway is leading the=20
investigation into the communication tower fires.

At this point, the fire marshal's office will confirm basic details=20
about the fires. But the fire marshal's office says there is certain=20
information it cannot release at this time because it doesn't want to=20
jeopardize the case it hopes to eventually bring against the arsonist.

Stein's home was not far from the fires at the other communications=20
towers, the most spectacular of them on a more than 200-foot tall=20
tower in Vancouver. That's shared by the Washington State Patrol and=20
the Washington State Department of Transportation headquarters.

Officials say while the state patrol's communications in Clark County=20
were disrupted by the fire, 9-1-1 communications were not affected.=20
Damage in that fire was estimated at more than $100,000.

That blaze prompted the $10,000 reward offer from a foundation.
Ham operators in the Vancouver area are very concerned and fear=20
anyone with a tower could become the next victim. They've been=20
transmitting word about what's been happening via repeater, HF radio=20
and the internet across the region. They're urging hams with towers=20
to be especially vigilant and take precautions to protect their=20
feedlines, but more importantly their homes and their lives.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in=20
Philadelphia.

--

There is general agreement that this anti radio fire bug has to be=20
stopped before someone to loose their life in one of his blazes. If=20
any one has information regarding these fires or the person setting=20
them please call the Crime Information Tip Line at 877 - 274 - 6311=20
or the Clark County Washington Fire Marshal's Office at area code=20
360 - 397 - 2186 and ask for extension 3396. You may remain=20
anonymous on either line. (ARNewsline =E2=84=A2, CGC, others)

**

ENFORCEMENT: FCC WARNS NEIGHBOR OF HAM OVER INTERFERENCE

A neighbor of a ham radio operator who refuses to clean up=20
interference he is causing could now face a stiff fine. The
FCC'as=20
Daryl Duckworth, NN0W, says that the agency is giving the neighbor=20
one last chance to comply:

--

Duckworth: "A follow-up warning letter went to a resident in=20
Friendwood, Texas, concerning interference to William Cooper, W5ZAF,=20
from a battery charger. The amateur had supplied ferrite beads=20

earlier to the resident which did solve the problem. Evidently, the=20
resident changed his mind and tossed the ferrites back over the=20
fence."

--

The FCC says that if the interference is not corrected by September=20
15th, it will have its Field Office investigate the matter and=20
possibly issue the uncooperative neighbor a hefty fine. It also=20
suggested that he consult an attorney regarding the FCC rules that=20
control radiation from unlicensed devices like the battery charger=20
that's causing the problem to the ham next door. (FCC, RAIN)

**

THE BPL FIGHT: ARRL ASKS FCC TO CLOSE DOWN AZ. BPL TEST

Some important developments on the B-P-L front. First to Arizona=20
where the ARRL is calling on the FCC to immediately shut down a=20
Broadband Over Powerline field trial in the Cottonwood. This,=20
because it's causing severe interference to Amateur Radio=20
communication in the area.=20

The ARRL Letter says that Electric Broadband LLC and utility A-P-S=20
have been operating the B-P-L experiment at two sites since June=20
under a Special Temporary Authorization the FCC granted Electric=20
Broadband in March. Michael Kinney, KU7W, filed the first Amateur=20
Radio complaint in June. It cited testing by the Verde Valley=20
Amateur Radio Association in the 1.8-30 MHz range to show that B-P-L=20
interference made attempts at ham radio communication useless. The=20
interference on typical Amateur Radio equipment shows received=20
undesired signal levels in excess of 60 dB over S9.

According to the ARRL, both the utility and Electric Broadband were=20
contacted, and no response was received. The ARRL says that both=20
companies are aware that the B-P-L field trial has been causing=20
harmful interference and neither has taken any steps to either=20
resolve it or terminate the test. (ARRL)

**

THE BPL FIGHT: BAD NEWS FROM DOWN UNDER

Meantime, Broadband Over Powerline and its introduction in Australia=20
has that nations hams on the alert. This, because little has been=20
known about what has been occurring behind the scenes as power=20
companies prepare to adopt the B-P-L technology and the Australian=20
Communications Agency considers rules to govern it. Now, WIA Newsman=20
Jim Linton, V-K-3-P-C has uncovered an almost terrifying=20
development. One that could mean the end of H-F operations down-
under for many V-K hams. =20

--

The future introduction of Broadband Powerline Communications (BPL)=20
in Australia could be on the condition that "less significant" HF=20
radio users such as radio amateurs and four wheel driver clubs would=20
not be protected from any interference it causes.=20

The Australian power industry has a real concern about the added=20
expense required to address interference that could affect amateur=20
radio stations and other recreational radio users. Its arguments=20
include that to remove amateur radio frequencies from a BPL system=20
will add cost and reduce the capacity and potential data rate. The=20
power industry is requesting that the Australian Communications=20
Authority (ACA) outweigh the concerns of recreational or "less=20
significant" HF radio users with the higher community benefit of=20
providing greater access to broadband-enabling technology.=20

The ACA, in response to the power industry concerns, is now examining=20
the legal possibility of allowing BPL networks to cause substantial=20
interference to "less significant" radio services, while other radio=20
services would continue to be entitled to interference protection.=20
Presumably if this becomes reality the Amateur Service could lose its=20
protection against harmful powerline interference too. After all,=20
were are in the eyes of some just a "less significant" radio service.=20

This has been Jim Linton VK3PC for WIA National News.=20

--

If this does happen it could mean a lot fewer V-K callsigns will be=20
heard on the Hiugh Frequency and low VHF bands. (WIA News)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline,=20
heard on bulletin stations around the world including the repeaters=20
of the Rocky Mountain Radio League serving Denver and Bloomfield,=20
Colorado.

(5 sec pause here)

**

RESTRUCTURING: ARRL PROPOSES BANDWIDTH DEFINED HAM SERVICE

The ARRL has released a synopsis of its petition to the FCC aimed at=20
restructuring the Amateur service along bandwidth defined lines. =20
While what has been made public is highly abreviated, a drafted, the=20
ARRL's bandwidth petition would preserve double-sideband AM and would=20
stop short of opening the phone bands to digital and other modes of=20
the same bandwidth.=20

The ARRL's petition also proposes to limit bandwidth in the CW=20
subbands to 200 Hz, which also will accommodate data modes such as=20
PSK31. It also suggests to limit bandwidth in the=20

existing "RTTY/data subbands" to either 500 Hz or 3 kHz, with phone=20
emissions specifically prohibited in certain subbands where 3 kHz=20
would be permitted. =20

Obviously this will be an ongoing story. More on this next week as=20
reaction comers in. (ARRL)

**

HAM RADIO IN SPACE: HURRICANE CHARLEY WRECKS AMSAT LAB

Hurricane Charlie has also taken its toll on the Amateur Radio space=20
program. This, with word that the storm destroyed the building=20
housing the lab used to assemble the latest series of ham radio=20
satellites.

Hurricane Charlie hit Orlando, Florida at about 8 p m Eastern on=20
Friday, August 13th packing sustained winds estimated at close to=20
100 miles per hour. One of the places sustaining damage was Orlando=20
Executive Airport. This was home of the AMSAT Laboratory. The place=20
where ham radio satellites have been assembled and tested prior to=20
launch.=20

Rick Hambly, W2GPS, reports that AMSAT members in the area survived=20
with relatively minor damage but the building that houses that AMSAT=20
Lab suffered severe structural damage from Charley's onslaught.=20
It=20
has now been condemned and will have to be torn down.=20

W2GPS says that the equipment and parts inventory at the lab are in=20
good shape but AMSAT was given less than two weeks to move out and=20
find temporary storage for its equipment. The Amateur Radio space=20
agency also must begin a search for a new building to support=20
development of the Eagle ham radio satellite and future projects. =20

Complicating matters is that AMSAT's insurance does not cover the=20
costs of temporary storage or of moving to a new facility. So, they=20
are asking the Amateur Radio community to keep ham radio space=20
projects alive by sending a donation to AMSAT's Hurricane Fund. =20
Hambly says that the money collected will be used to get the lab back=20
in operation as soon as possible.

AMSAT North America is a federally charted 501(c)(3)not for profit =20
organization. Any donation should be tax deductible in the United=20
States. Information on the fund and how to donate is in cyberspace=20
at www.amsat.org. (AMSAT-NA, W2GPS, W5DID)

**
RESCUE RADIO: RADIO STATIONS GET PRAISE IN CHARLEY AFTERMATH

Broadcasters in Florida have been getting involved as the clean-up=20
following Hurricane Charley. One has taken on being the voice of the=20
storm ravaged area.

According to the CGC Communicator, FM radio station Seaview-104.9 in=20
Punta Gorda, Florida and four of its sister stations are all owned by=20
Clear Channel Communications. Seaview-104.9's studios were damaged=20
and the station was knocked off the air by Hurricane Charley, but=20
service was restored within hours. According to a report in the St.=20
Petersburg Times, once the storm had passed, General Manager Mike=20
Moody returned to the building housing his station. The roof was=20
shredded and the ceiling collapsed. But one studio, no bigger than a=20
walk-in closet, was in working order.=20

Moody said that there was no power but using a generator he got the=20
studio on the air. He also found a phone outlet reserved for a FAX=20
machine operating so he plugged in a phone, put the receiver to the=20
microphone and then let callers unravel their tales of storm=20
survival. =20

The studio is the only one based in Charlotte County. Because of=20
this it has become a lifeline for residents searching for information=20
to help them cope with the storm's aftermath and listeners like Ron=20
Hall, KP2N, have rallied around the station in support of its vital=20
post storm activities. (CGC)

**

RESCUE RADIO: UK GROUP ACTIVATES FOR FLOODS

Meantime, over in the U-K, a ham radio emergency communications unit=20
was activated. This, after severe rains caused flooding near the=20
town of Boscastle. Jeramy Boot, G4NJH, is in Nottingham with more:

--

Cornwall Raynet Groups were put on standby by their Emergency =20
Planning Unit on the evening of Monday, 16th August, following =20
communications difficulties resulting from the massive flooding at=20
Boscastle. Eleven volunteers were available to proceed to the=20
emergency, but were stood down later as the communications=20
difficulties had been resolved.

Jeramy Boot, G4NJH

--

For those not aware, RASYNET is the U-K equivalent of ARES and RACES=20
here in the U-S-A. (GB2RS)

**

HAM RADIO ON THE NET: MORE CHANGES AT QRZ.COM

More changes have come to the QRZ.com super site. This, as its owner=20
Fred Lloyd, AA7BQ, announces some policy changes regarding the=20
callsigns that are listed in the QRZ Callsign database.

--

According to QRZ's Lloyd, the site will no longer accept callsign=20
designators, prefixed or suffixed, as independent callsigns. This=20
would include reciprocal calls such G 3 slash K6PZW -- a call I might=20
be assigned if I were visiting England.

Lloyd says that these listings were problematic for both the QRZ=20
website and the QRZ CD ROM, and they were of questionable value to=20
begin with. As of the latest software update, the server will no=20
longer accept or record such entries. The logic is that anybody=20
wanting to contact the callsign holder could just as easily look them=20
up by their primary callsign.=20
=20
Also gone will be non ham call signs such as those self issued by=20
individual SWL's, Weather watchers, and others. Lloyd says that
Q-R-
Zed will continue to accept SWL listings as long as they are issued=20
by a formal body, and so long as they have an alphanumeric format. =20
But Lloyd says that an SWL callsign cannot be a primary login account=20
name to a website that manages amateur radio callsigns. =20

The bottom line: Non-amateur callsigns will continue to be excluded=20
from the QRZ CD ROM and will take last priority with server=20
management resource. In other words, they will be listed on a time=20
and space available basis, only.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW,
reporting.

--

These changes are in addition to the posting policy changes that=20
Lloyd announced two weeks ago. (QRZ.com)

**

RADIO LAW: SENATE WARNING ON CABLE RATES

The Senate says that it will consider new regulations for cable=20
television unless the industry addresses soaring prices and allows=20
consumers more channel choices. Members of the Senate Commerce=20
Committee said pressure from angry constituents is leading them to=20
look at ways to hold down cable rates and let subscribers choose=20
individual channels rather than packages set by operators.=20

Since Congress deregulated the industry in 1996, cable rates have=20
increased by 53 percent while inflation has risen 19 percent. Cable=20
operators said the jump reflected higher programming costs,=20
more channels and system improvements such as rewiring to provide=20
digital TV. (Published reports)

**

RADIO LAW: BETTER CELLULAR SERVICE

The government says wireless companies are doing a better job of=20
switching customers who want to keep their cell phone number. In the=20
first month after the change took effect, the Federal Communications=20
Commission received 24-hundred complaints. Most were from people who=20
said the transfers were taking too long. In the past month, the=20
number of complaints has fallen to 400. Customers have had the=20
option of keeping their phone numbers when they switch to a new=20
carrier since November. (Science OnLine)
=20

**

EMERGING TECHNOLOGY: PERSONALIZED PHONE MUSIC SERVICE FROM SONY

Meantime Sony Corporation has announced what it called the first=20
personalized radio service for mobile phones. Under the still-
unnamed music streaming service, subscribers would not own any of the=20
songs but could create a customized channel to listen to the music=20
they want, storing favorite tunes in personal playlists. Users would=20
also be able to listen to music from a collection of predefined=20
channels. A "smart personalization" feature could also keep track=20
of the subscriber's music preferences and make song suggestions. =20
(Sony)

**

THE SOCIAL CIRCUIT: TENNESSEE IN AUGUST

Turning to the ham radio social calendar, word that Tennessee's =20
Short Mountain Repeater Club will be sponsoring the Cedars of Lebanon=20
Hamfest on August 28th. This, at the Gladville Community Center in=20
the town of Gladville Look for vendors, a large tail gate sales area=20
and lots more. For more information e-mail keharris@netc.com or take=20
your web browser to www.qsl.net/smrc (E-mail)

**

THE SOCIAL SCENE: LIGHTHOUSES OF AUSTRALIA 2004 ANNUAL DINNER=20
WEEKEND=20

And if you want to travel a bit, this year's Lighthouses of Australia=20
Dinner will be held in Launceston, Tasmania on Saturday, October 2d. =20
The event will include a trip to the National Archives Office Touring=20
Exhibition on Australian Lighthouses known as "Beacons by the Sea." =20
It will also include visits to the Low Head Light and the Pilot=20
Station Maritime Museum also at Low Head the same weekend. (GB2RS)

**

THE SOCIAL CIRCUIT: GERMAN VHF CONVENTION HAS NEW DATE

And from Europe word that Germany's Weinheim VHF Convention,
which=20
had originally been scheduled for August 28th and 29th will now take=20
place on 11th and 12th of September. The new venue is Bensheim which=20

is 10 kilometers north of Weinheim. Full details are on the web at=20
www.ukwtagung.de (DARC)

**

BREAK 2

This is ham radio news for today's radio amateur. From the
United=20
States of America, We are the Amateur Radio Newsline with links to=20
the world from our only official website at www.arnewsline.org and=20
being relayed by the volunteer services of the following radio=20
amateur:

(5 sec pause here)

**

WORLDBEAT: CB SPECTRUM SHARING IN THE UK

There may soon be some new sounds on 27 MHz C-B in the United=20
Kingdom, and they won't be saying 10-4 Good Buddy. In fact they
may=20
be very formal sounding. This, as British telecommunications=20
regulator Ofcom proposes to allow local religious and community=20
organizations to operate one-way low power broadcast stations within=20
the U-K Citizens' Band allocation. Our producer, Bill Pasternak,=20
WA6ITF, has more:

--

No. Its not a joke. And Great Britain's Office of
Communications --=20
Ofcom -- says that this is how the new shared C-B service will work. =20

At first a small number of organizations will be licensed to transmit=20
religious services in a limited number of pilot areas. These would=20
be called Community Audio Distribution Systems or C-A-D-S. Their=20
specific purpose will be to allow house-bound religious congregation=20
members -- people unable to travel to a house of worship but who=20
wish to hear local religious community services -- the ability to do=20
so.

If proven effective, Community Audio Distribution Systems would be=20
expanded as a short-range and inexpensive wireless public address=20
systems. The U-K radio regulator says evidence of demand for such=20
arrangements has arisen primarily from within religious communities=20
and this is where Ofcom expects the majority of use to be. But its=20
not making this a religious-only radio service. In fact it is=20
encouraging other community groups could also use the system for=20
other similar purposes.

To test these plans, Ofcom is proposing a closely monitored year-long=20
pilot program in the areas where interest has been most widespread=20

and sustained. This includes West Yorkshire in England and all of=20
Northern Ireland. In those regions C-A-D-S users will share spectrum=20
with the Citizens' Band users in a way that Ofcom says will provide=20
the flexibility required to transmit religious and community service=20
material while protecting other spectrum users from harmful=20
interference. At least it will try its best to do so.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF,
reporting.

--

Can something similar happen here in the U-S-A. Not likely. At=20
least not very soon. C-B is still to crowded, unruly and=20
unstructured a band to effectively share. But it is expected that=20
other administrations world-wide will be watching this United Kingdom=20
C-B sharing experiment with an eye to introducing similar services in=20
their nations as well. (RSGB)

**

WORLDBEAT: BIG VHF TECH SYMPOSIUM DOWN-UNDER

The Wireless Institute of Australia's Central Region is holding a=20
Technical Symposium Saturday October 2nd. Rex Moncur VK7MO will=20
discuss Digital enhancement of VHF signals, Doug Mc Arthur VK3UM EME=20
Techniques, Joe Kasser VK5WU Computers for Amateur Radio and David=20
Giles VK5DG will explain that Amateur Satellites are really only high=20
tech repeaters on orbit. The venue is the Modbury Heights School with=20
talk-in on 148.850 MHz. (WIA News)

**

HAM RADIO IN SPACE: INDIA'S HAMSAT READIED FOR LAUNCH

A Dutch student is helping India put its first Amateur Radio=20
satellite in orbit. Willian Lijenaar, who has graduated as an=20
electronics engineer, has provided a transponder to the satellite.=20

According to the W-I-A News, the Indian project is called HamSat and=20
is scheduled for launch in four or five months. Reportedly, the=20
coordinator of HamSat had asked the young Dutch engineer to design=20
and build the transponder. Along with Lijenaar's unit an Indian=20
built transponder will be part of new bird as well. (WIA News)

**

RADIO SCIENCE: NASA TO SAVE HUBBLE

NASA has decided to try to save the orbiting Hubble Space Telescope. =20
Possibly by sending a Canadian made robot to fix it.

Nasa Administrator Sean O'Keefe told researchers at the agency's=20
Goddard Space Flight Center in Maryland about the plan. He also has=20
instructed engineers to begin work to put the robotic mission into=20

orbit by 2007. (NASA)

**

DXCC: SOMALIA NOW ACREDITED

Some good news for D-Xers. Effective immediately, the ARRL DXCC=20
Branch will accept QSL cards for operations taking place in Somalia=20
using the 6O / T5 prefix and suffix. This includes the Somaliland=20
which is north-western Somalia and Puntland in north-eastern=20
Somalia. These are autonomous areas but will be accepted along with=20
the southern and central areas of that nation.

The DXCC will also accredit operations possessing written permission=20
from any recognized authority that is acknowledged to be in control=20
of a particular region of Somalia. All cards will count for the=20
Somali Democratic Republic. And says the DXCC, QSL's for past=20
operations will be accepted where proper documentation has been=20
submitted. =20

Of coarse this is subject to change based on future developments in=20
Somalia. We quill have more D-X news a bit later on. (ARRL, GB2RS)

**

DX

In D-X, word that Kris Partridge, G8AUU, is working in Baghdad and=20
has received the callsign YI9AU. Kris is reported to be active on=20
the High Frequency bands using 100 watts to a long wire but hopes to=20
improve his antennas soon. He is also hoping to become active on=20
Echolink and says that he be in Iraq until early or mid-September.

And G0JMU is again active from Malawi as 7Q7HB. Reports say that he=20
will be there until at least the 22nd of September.

Also, news that 5B4AFM will operate as J42004A from Skopelos and=20
Athens through the 1st September. The island of Skopelos counts as EU-
072 for the RSGB Islands on the Air award program.

Lastly listen for the Cook Islands to be on 6 meters with a better=20
signal in coming weeks. This as KC5YKX reports over the VHF=20
Reflector that he has shipped a 5 element beam there for ZK1CG to=20
use. ZK1CG should be on the Magic Band as soon as the antenna=20
arrives. QSL all of these operators in these stories as directed on=20
the air. =20

(All aboveDX from various DX sources)

**

THAT FINAL ITEM: ECHO - THE TONE ACCESS HAM RADIO SATELLITE

And finally this week a rhetorical question. Why use continuous tone=20
coded squelch access to talk through a ham radio satellite? AMSAT=20

says that there are several very good reasons and Amateur Radio=20
Newsline's Norm Seeley, KI7UP, has them in this report:

--

Continuous tone coded squelch is better known in ham radio circles=20
under its Motorola trade name of P-L or Private Line. And AMSAT says=20
that there are several good reasons to use it on the new Echo ham=20
radio satellite. =20

First, and simply, is on orbit power management. The ability to=20
minimize the amount of power used by the satellite.

Recent data collection shows that on average, Echo's tone access FM=20
repeater transponder is on for less than 40% of an orbit. There are=20
orbits where that number is as high as 65%, but the average is below=20
40%. That means the satellite is conserving over 60% of the power=20
that would have been consumed by the transmitter if it were being=20
keyed up by every random signal passing through its receiver. Since=20
you cannot easily change rechargeable batteries on a satellite like=20
you can on a terrestrial H-T, power management is crucial to the long=20
term stability of Echo or any man made satellite.

The second reason kind of tag's onto the first. Its the idea of=20
minimizing the three letters dreaded by hams world wide: Q-R-M.

In the tone access mode Echo does not have to listen to other traffic=20
on the Amateur bands or any other signal not intended for the=20
satellite to relay. While the satellite still has to compete with=20
these R-F sources to capture the receiver, they are not retransmitted=20
downlink. This means you do not have to listen to taxi cabs being=20
dispatched in some third-world nations where the V-H-F Amateur bands=20
have more business going on than ham radio contacts being made. A=20
problem that the world wide Intruder Watch program has been fighting=20
for years.

Yet another reason for tone access on Echo. By closing the audio=20
path when no access tone is present the ground based user hears a=20
short unmodulated carrier for the duration of the squelch tail. This=20
can be used as a good measure of how well you are actually hearing=20
the satellite. =20

Without tone access filtering, uplink band noise is heard. And, any=20
ham who has heard a carrier access repeater where the squelch is open=20
knows what that sounds like. Amplified noise that is sometimes=20
difficult to differentiate from the actual band noise. In the case=20
of a ham radio satellite it means not knowing if you are hearing the=20
bird at all.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in=20
Scottsdale, Arizona.

--

After Echo's launch there was talk on some terrestrial repeaters
that=20
AMSAT had put a private P-L repeater in space. This is far from the=20
case. Without tone access, the lifespan of Echo would be=20
significantly reduced and fewer hams would have their chance to make=20
contacts through it. (ANS)

Y'know, before he went the LSD direction, Leary was a real research star re
the interpersonal theory of psychiatry (seminal book published about 1957 I
think). He was also a captivating lecturer (I've seen tapes). It's the
basis for the interpersonal psychotherapy treatments for depression and
anxiety, which plays second fiddle to cognitive behavior therapy, but is
considered acceptable to third party insurance payers. Leary said he went
in the drug direction b/c of the weird directions of his country, with the
Vietnam war and civil rights. I think he could have used some therapy to
take responsibility for some of his wacky decisions.

# 2152. Re: Antenna Theory

Newsgroup: rec.radio.broadcasting
Date: 2004-08-29 22:16:50 UTC
From: peterh5322@aol.comminch
Message-ID: <cgtkki$gha$1@xuxa.iecc.com>
Source record: 4290

>>
At medium wave (AM Broadcast) many Class A stations (formerly "clear channel")
use antennas of about 190 or 200 degrees tall.
>>

A Clear Channel is a Clear Channel is a Clear Channel. Any of 540, 640, 650,
660, etcetera.

The average height over all ND-U Class As is 195 degrees.

The real goal here is to get 400 mVm/kW at 1 km, or better, without also having
high-angle radiation which could cancel the groundwave in the fringe area ...
that area where the primary service area ends and the secondary service area
begins.

Taller than about 200 degrees requires sectionalization to do this.

225 degrees is a real killer for a Class A, but is perfectly fine for a Class B
or C, which doesn't have a large primary service area, anyway.

The best performing Standard Broadcast radiator is 360 degrees tall, and
consists of a 180 degree bottom section, and a 180 degree top section.

>>
The FCC requires a minimum antenna effectiveness for that class which is higher
than for the other classes of stations.
>>

362.10 mV/m/kW at 1 km for Class A.

281.63 mV/m/kW at 1 km for Class B and D.

241.40 mV/m/kW at 1 km for Class C.

Of all lower 48 Class As, two don't have conforming radiators, and both of
these are in San Francisco.

Of all Alaska Class As, only one has a conforming radiator.

>>
The base impedance of these sticks near a half-wave tall is going to be pretty
high - and all but one US Class A
station run 50 kW.
>>

The only such Class A in the lower 48 is 1560 in Bakersfield, CA.

There are numerous such Class As in Alaska.

Interestingly enough, CC is flipping the station in Denver just one day after Boulder's Pacifica-friendly KGNU has taken over the former KJME. The station claims that there's been call for them to improve their signal in Denver, particularly after the Iraq war and the failure of KNRC at a balanced talk format (probably because it was balanced).

KGNU's always been farther left than the public radio mainstream (they dropped NPR membership in the early 90s after their listenership complained about the network being too passive on coverage of the first Gulf war). However, along with "Democracy Now!" and "Free Speech News," they carry some BBC World Service programming. However, the only other name-brand public radio shows they carry are "AfroPop Worldwide" and "This American Life" and most of the rest of their programming is volunteer-driven music programming. Not exactly what political junkies would want (but on the other hand, I assume most Pacificistas would consider Air America too capitalist for their tastes).

>From the point of view of a consumer: The only time my wife and I don't listen to XM radio is when we're in my car, which doesn't have it yet. When we're in her car, it's pretty much constant XM. We're remedying my lack of XM as soon as the XM-Direct aftermarket box comes out. We were able to find an Alpine box for her car. Until I read this thread, I'd never heard of IBOC. I still don't know what it is. I've seen and heard many ads for XM and Sirius, though.

Radio is definitely not going away, but it is going satellite. You may have scores of commercial radio choices in LA, NYC, Chicago, Dallas, or Miami, but you don't in Knoxville, TN, Overland Park, KS, Portland, OR, or most of the rest of the country. 95% of the country listens to land-based radio weekly, but much less than 1% of the country currently has XM. I don't know what the subscriber figures are for Sirius, but both are going up. Just about every week at work someone asks me about XM and ends up getting it. If the weather suddenly changes or traffic is snarled, I may switch to a local station and wait through the commercials, hoping that they'll tell me about it. They do tend to get things a little quicker than the Boston-area XM traffic and weather channel.

2 million XM subscribers in under 3 years?!? Wow! Cable TV started in 1948 and it didn't hit 2 million subscribers in the U.S. until it had been around for about 20 years. The creation of HBO in 1972 probably helped the skyrocket in subscribers to 15 million by the end of the 1970s. I wonder what the flood of cheap XM receivers that's recently started will do to XM market penetration. Instead of $250 or more for an XM receiver that the first 2 million subscribers paid, now we're looking at $50-$100. You, yourself, say that you have or had six XM receivers at the same time!

People pay for cable and satellite TV, even with all of the commercials. Stating that satellite radio has no chance against

terrestrial broadcast is starting to have the same level of "wisdom"
that "GET A HORSE!" once had.

CBU (Vancouver, BC) is not 50 Kw at night.
Nor does CBU have an ancillary 1650-1700 Khz frequency at 50Kw.
Nor do most Canadian MW stations close to the border.

US stations have bombarded Canada with US material for the past 60 + years.

It is not a good reflection on the US to be bombarded (in Canada) by 3 to 5
US stations on top of each other, as soon as leave a major Canadian
metropolitan centre.

Canada should (if it does) adopt DRM for MW radio, at least for daytime
transmission.

One event that may spark an increase in satellite radio use in the Miami, FL area is the decision of WKAT, "Classical 1360", to broadcast infomercials during the morning hours. The fact that there is classical music on AM radio shows the limited choice of music on FM.

My only question is that after a 2 year period of XM and Sirius, why hasn't the cost of receiving equipment come down?

> their base impedances.

And yet it does. How, if I may ask, do you think that the radiation pattern of a 180 degree vertical element is lower than a 90 degree radiator? As you mention, it's current distribution, but it's not as simple as you've characterised. The field is generated by the summation of the currents over the length of that antenna that combine to provide the "pull-down" effect you mention, and in the process, since the infinitesimal slices of the radiator, each contributing its own part to the overall field, also interact with each other in much the same way as separate elements in a directional array interact, the phasing and amplitude over the length of the radiator serve to enhance the direction towards the horizon and reduce radiation towards the sky. Now, the reason why the base impedances are different for these two examples is the same as why the effective impedance for one element in a directional array changes when a second element is introduced into the nearspace around that first element, because the interactions between the infinitesimal slices serve to increase the "coupling" of the radiator to space. It's all calculus, with a heaping serving of trigonometry thrown in for good measure.

> If properly matched to their transmission lines, both of them radiate the
> same total power. But the elevation pattern of the 180 degree radiator has

> ground wave of the two.

I long ago recognised that, in the physical world, you don't get something for nothing (a concept which, it's pretty clear, the current administration in Washington doesn't get...or maybe they do?). Nothing in what I've discussed is ignorant of this, although admittedly it's not explicitly stated. We broadcast engineers tend to look at radiation patterns as they relate to the potential audience, knowing that the areas we've pulled power from won't miss it, and then pat ourselves on the backs for having designed an antenna system with "gain."

Well, there you have it. 1.56 times, while not exactly 2, is closer to 2 than it is to one. Consider that, since radiated field is over an area for our purposes, a radiator half as effective as the reference would have 70.7% as much field, or the reciprocal of the square root of two. It was a gross approximation, Richard. From what I've seen of broadcast engineers, many have only a practical knowledge of the underlying theoretical concepts...whether it's the understanding of modulation theory (how many people do you know who think that amplitude modulation actually manipulates the amplitude of the carrier? Or that FM actually changes the centre frequency?) or antenna design, or solid state theory...never mind quantum theory. I don't believe that getting down to this level would serve any practical purpose in this newsgroup, however, especially since I'm not prepared to start introducing mathematical equations into a text-based format.

The way I count, it has dropped to about 1/2 or 1/3 what it was 3 years ago when XM signed on. (Unless you got one of the Friends & Family deals back then or ....) In any case the price is considerably subsidized from what I hear - in both XM and Sirius cases.

B. Haberkost:
> And yet it does. How, if I may ask, do you think that the radiation
pattern of a 180
> degree vertical element is lower than a 90 degree radiator? etc

Not because of any change in base impedance. The electrical height of the tower determines BOTH the elevation pattern it produces, AND the base impedance of that tower. Base impedance is an effect, not a cause.

If base impedance determined efficiency and "power transferred," then a 90 degree tower should have very nearly the same elevation pattern as a 245 degree tower, because the base impedance for those two heights are very similar (90 degree is about 63+j105 ohms; 245 degree is about 64 +j50 ohms). Yet the elevation patterns for these two verticals are greatly different. The elevation pattern of a 245 degree vertical has two distinct major lobes; one centered on the horizontal plane, and one at about 45 degrees. The 90 degree tower produces an elevation pattern with a single lobe centered on the horizontal plane.

These verticals can be computer-modeled to show their shapes and intrinisic gains in dBi. I'll e-mail you a graphic I generated in NEC to compare them for you.

Sequence #2...

R. Fry:
> > Put another way, the input power to the 90 degree radiator would have to
be
> > increased about 1.56X in order to produce the same ground wave field at
one
> > mile as the 180 degree radiator.

> radiator half as effective as the reference would have 70.7% as much field, or the
> reciprocal of the square root of two. It was a gross approximation, Richard.

To help you compare geographic areas covered by a 90 degree vs a 180 degree radiator, here are the numbers using the FCC's MW coverage program. For 1kW input power to the tower base, a 1,000 kHz carrier, and conductivity of 8mS/m, the radial distance to the 2mV/m contour is 25.6 miles from 90 degree tower, and 28.5 miles from the 180 degree tower. The areas covered are 2,058 mi² and 2,550 mi² respectively. So the 90 degree vertical covers about 80% of the area served by the 180 degree vertical. Not very close to a 2:1 difference at all.

Sequence #3:

> From what I've seen of broadcast engineers, many have only a
> practical knowledge of the underlying theoretical concepts...whether it's
>the understanding of modulation theory (how many people do you know
>who think that amplitude modulation actually manipulates
> the amplitude of the carrier? Or that FM actually changes the
>centre frequency?)

The instantaneous frequency DOES change with frequency modulation, although the average center frequency stays close to the unmodulated value. In fact, a very common FM exciter design uses the incoming program audio to change the resonant frequency of the frequency-determining components of an RF oscillator, whose resting frequency is the stations licensed carrier frequency.

Well, as I say, the better stations decided that if they must do news,
they might as well make the best of it. I worked in that kind of
operation, as well as a few where the 24/7 news coverage was nothing
more than running the network hourlies or jocks reading wire copy.
The latter operations were the majority. In the pre-deregulation
'70's a number of music stations figured out that they could game the
system by running huge amounts of mostly rip'n' read, pre-recorded
news in the overnight shift, thus clearing most of it out of the
daytime hours where it was considered by PD's to be a tune-out factor.
I worked in one of those, too. I remember one night in my wild youth,
taping a 30 minute newscast that ran at 3 AM while quite obviously
drunk. Nobody ever noticed.

CBU is 50,000 watts day and night. Most canadian stations that are 50 kw at night are pretty near the border, as most of Canada's population is near the US border.

No 50 kw stations operate in 1650 to 1700. All are 1 kw at night in North America.

As I mentioned, there are nearly 50 Canadian staitons with 50 KW at night on AM.

That was Leary's conclusion, too.

# 2173. MW Vertical Radiators

Newsgroup: rec.radio.broadcasting
Date: 2004-09-01 18:30:11 UTC
From: Richard Fry <rfry@adams.net>
Message-ID: <ch54fj$n4u$1@xuxa.iecc.com>
Source record: 4168

"Bob Haberkost" wrote (clip):

>
> This concludes your antenna theory class for the day. ;-)

---

The above calls for a bit of discussion, IMO

The base current of a MW vertical radiator depends on the resistive term of the base impedance of that radiator, according to the equation I = sqrt(P/R), where P is the applied power and R is the base resistance.

However current is not uniform over the height of the radiator. It must satisfy the physical reality that a current node (minimum) always must exist at the top of the tower. Other current nodes occur at 1/2 -wave intervals below the top, if the tower is tall enough.

Between the nodes, current rises to a loop, or maximum, at intervals of 1/4 wave. The maximum current present at the loop(s) is a function of the amount of power applied to the base of the radiator -- not to the base impedance of the radiator.

So for a given input power, the same absolute value of current will be present starting 1/4 wave below the tower top, and repeating every 1/2 wave below that -- regardless of the base impedance of the radiator.

Far-field radiated EM waves from MW vertical radiators of any height are identical in that they all have equal electric and magnetic vectors at right angles to each other. A ferrite receiving antenna performs well on MW frequencies for reasons unrelated to the ratio of the E & H fields in which it is immersed.

For sale:

(The "Radio Crazy" is loose!!!)

Partial interest in 1 KW AM daytimer in small Alabama city. Non-directional. County seat. City of over 10,000 population. About 30,000 in county.

This is a joint venture. There is an element of risk and you could lose all or part of your investment.

Active or inactive investors with at least $5,000 each are welcome. All investors would be on the board with full voting rights if desired. No investor can hold over 49 percent interest. This goes for me too!

Total consideration for the station will be about $40,000. No real estate is included. NO REAL ESTATE IS INCLUDED!! You heard it first from me, kiddies!!

I worked at Detroit's all-newser, WWJ/950, in the mid/late 80s, and they still had the teletype sound running in the background. I believe it was on a continuous loop mechanism, likely the same variety that was used at CKLW/800 in its 20/20 News heyday.

WWJ remains all news, but the teletype sound was dumped years ago.

John Z

Similar to the sound of dragging a needle across a phonograph record.
Younger people today associate a particular meaning for that popular
sound effect, but have no inkling as to what it's actually about!

KTVU in Oakland -- yes, a television station -- actually *added*
that sound effect, very softly in the background but in stereo, a
little more than a year ago.

Interesting. Especially since the older microwave ovens operated on 800 and 900 Mhz.

Why are people who are uneducated in certain subjects always the first to jump in on a conversation and tell everyone else how they think things really are?

Would you call a radio station and ask the receptionist how many towers they use? Why would you expect an ordinary employee, not in the engineering department, to know about IBOC? At this point, it's highly experimental and not promoted heavily.

I worked at WOR for 10 years. It's a big place with a lot going on. If you want to know about IBOC, talk to their Director of Engineering, Tom Ray. He can tell you more than you'll ever remember about the system.

Rich

No, I didn't have a bad experience. And the evidence does NOT contradict me. I've seen it. I think they know a thing or two in the New England Journal of Medicine. You don't talk to a broken machine to fix it.

> That's why it gets paid for by insurance.

That's hardly evidence.

For sale:

Partial interest in 1 KW AM daytimer (non-DA)in small
Alabama market. Community is the county seat and has a
population exceeding 10,000. County population exceeds
30,000. Station is on the air since 1949.

This is a joint venture. There is an element of risk
and you could lose all or part of your investment.
(Standard required disclaimer).

The is NO real estate included. Total asking price for
station is $60,000 cash or $75,000 with seller
financing.

Active or inactive investors with a min. of $5,000
each are welcome. All investors would be on the board
with full voting rights if desired.

Tel: (478)741-1710 in Macon, GA.

Please! No "tire kickers" and/or "AM bashers", etc.

Those properly identifying themselves will be given
city of license and call letters, etc.

## 2196. WFAN power reduction

Newsgroup: rec.radio.broadcasting
Date: 2004-09-02 21:29:36 UTC
From: Jim <jwwd7SPAMXXX@yahoo.com>
Message-ID: <ch83c0$fme$1@xuxa.iecc.com>
Source record: 4186

FCCInfo.Com lists WFAN New York with a CP to change power to 35 KW day and night (with "Mode" ND2, non-directional 2 (whatever 2 means...non-directional different patterns day and night...hello???).

Anyway...anybody know why WFAN...with a great signal, best in New York, low frequency 660 kHz, 50 KW ND, island tower site (multi with WCBS) with salt-water path to surrounding land...would want to drop to 35 kHz.

Reduce electric bill???

What's the story? Temporary?

The best 50 kw heritage AM signals in New York are...in order...WFAN 660, WABC 770, WCBS 880, and depending where you live, directional WOR 710.

And, again, depending where you live in relation to patterns...WBBR 1130, whatever ESPN calls the former WHN WEDW 1050, poor WINS 1010, and signal poverty-stricken WQEW 1560.

WTIC Hartford, 1080 50 KW is a curious case. Maybe its transmitter site dates to a time when ground conductivity wasn't appreciated, but it is located on a rocky mountain ridge, above and west of the flat, Connecticut River mud flats and plains. Of course today, acquiring a site along the river is probably impossible, but WTIC's signal suffers when compared to similar-frequency NYC signals, 1050 or 1130. As for WINS, NYC 1010, nobody else is that bad.

I never understood why some years ago in the big NYC frequency shuffle, why Westinghouse didn't plunge into the frey for 1050 when WFAN departed it for 660. WEVD would have done just as well (or poorly) on 1010 as they did 1050, and WINS would have done much better area-wide on 1050.

# 2197. CBU's 6160 khz SW relay not effective at all : 50 kw and a Horizontal Log Periodic could serve 50%+ of Canada's landmass.

Newsgroup: rec.radio.broadcasting
Date: 2004-09-04 03:31:36 UTC
From: "http://CBC.am/" <mikehack@u.washington.edu>
Message-ID: <chbcuo$fgo$1@xuxa.iecc.com>
Source record: 4190
Cross-posted to: alt.radio.broadcasting,alt.radio.digital,rec.radio.broadcasting,rec.radio.shortwave

CBU's 6160 khz SW relay not effective at all.

A 50 kw shortwave transmitter (running DRM, backward compatable AM + DRM modulation) and a Horizontal Log Periodic antenna could serve 50% (potentally 75%) of Canada's landmass.

http://cbc.am/cbc.htm

Canada's rural and northern populations are for the most part not fully served by AM & FM radio stations during daytime hours. Although CBC North runs an extensive AM / FM and TV network for northern Canadian residents -- there are still millions of square kilometres that the CBC-SRC will never be able to reach with its current broadcast network.

The lack of daytime information radio network service does not help northern and rural residents in their day to day
lives. It goes without saying that the lack of access to an information radio service in Canada's remote regions increases the demands on expensive to deliver federal and provincial services. Poor delivery of basic government services has led to a negative relationship between northern and rural residents and Canada's southern urban population.

In a matter of speaking CBC-SRC has pretty much failed to meet fully the news and information needs of all northern
and rural residents, since these residents fell into the revised CBC-SRC mandate in the 1970s. This mandate is providing a basic information radio service to all of Canada's regions.

Most of Canada's populated remote areas can be reached cost effectively with two shortwave transmission sites. Shortwave is an ideal media for delivering radio programming to remote regions during morning, daytime and evening hours. The proposal before you is for a transmitter site in British Columbia that could serve western and northern Canada and a transmitter site in Newfoundland that can reach Labrador, Northern Quebec and regions in the high arctic that are poorly reached by the BC transmitter site.

Technical Notes

This proposal is for a two frequency network in the 49 meter & 41 meter bands shortwave (in the ITU band allocation

system) using four fixed frequency 50 kw transmitters. It is possible that higher powered transmitters could be used to combat shortwave fading. Current calculations suggest that a slightly higher powered transmitter will be needed to reach listeners in eastern Canada, as there are more severe

ionospheric distortions due to Quebec being situated over the magnetic North Pole.

The two transmitters would be expected to run in parallel around 16 hours a day, out of a shortened 112 hour week transmission schedule.

It is assumed that the shortwave transmitters would be fully DRM (Digital Radio Mondiale) compatible. DRM allows for FM radio quality digital audio over very long distances. DRM is fully backward compatible with existing consumer and professional shortwave receivers.

I expect a new frequency allocation for this shortwave service, as the CBC-SRC is already using two shortwave frequencies (http://www.cbc.ca/frequency/shortwave.html). The CBC-SRC needs to make a uniform allocation of 40 khz for domestic shortwave broadcasting within the 49 m and 41 m bands. This allocation would be made for use by all domestic shortwave broadcasters.

These area coverage computations do not represent full optimization. The frequency and antenna types may need to be altered to achieve the goal of covering 95% of Canada's land mass with a reliable shortwave service.

## 2198. Too much clutter on radio

Here's an article from RadioWorld about how radio needs to reduce its clutter.

http://www.rwonline.com/reference-room/skippizzi-bigpict/03_rwf_pizzi_sept_1.shtml

This is a strong pet peeve of mine. As a one-time radio GM, our stations held firm on clutter and price, but we were undermined by the competition and our customers. Of course, my argument was still right... that too many commercials is an incredible turnoff factor for listeners, and if people don't listen, no one hears the spots. And our stations remained numbers one and two, so I know we were doing something right.

Now that I am a listener, I am one of the first to turn away from a station that plays too many spots, especially if the spots are totally uncreative, boring and repetitive. Sometimes stations play the same spot twice during a single set! How effective can that be to that customer?

Radio has become ridiculously redundant.

>>

Before 1941, neither 1010 nor 1050 existed.

Both were added as Class II-Bs during NARBA.

Of all the DA-1 Class II-Bs, 1050 is the best engineered.

WFAN existed only briefly on 1050. 1050's heritage call is WHN.

# 2201. The Beeb" to air program on Amateur Radio and 9/11

Sep 1, 2004

BBC Radio 4 this weekend will air a documentary on Amateur Radio's involvement in the September 11, 2001, terrorist attacks.

The half-hour program, "Unsung Heroes," will be broadcast Saturday, September 4, at 1030 UTC. It will remain available on the BBC's archives for one month after that. "Through moving interviews, sensitive use of ham radio transmissions and some harrowing accounts, 'Unsung Heroes' reveals the little-known story of the 9/11 ham radio operators who provided vital communication networks for the rescue agencies," the BBC program listing says. "Hams, often mocked for their obsessive hobby, believe that September 11th became Amateur Radio's finest hour. Stephen Evans, the BBC's North American Business Correspondent, witnessed the attacks that day and meets with ham operators who witnessed the terrorist attacks or lost friends and relatives on September 11th and still helped to support the search-and-rescue operation."

Mark Phillips, KC2ENI/G7LTT, says the program, produced by Kate Bissell, features N2NOV, KF2EO, KE2UN AB2IZ, "and a whole host of others," including himself. It was recorded during the last week of June. The program also be available in MP3 format on Phillips' Web site starting September 4.

Email: corey@thecashcage.com

Labor Day Reality: Less Jobs For Disc Jockeys Though The Year 2012

(Little Rock) - At last count, there were 76,000 people in the United States working as disc jockeys and announcers. But, The U.S. Department of Labor says the number of jobs for DJs is expected to decline through the year 2012.

This is due partly to the lack of growth in the number of stations plus now, more than ever, several stations may be operated from one central office or region which reduces the need for staff.

"Many radio stations operate overnight without any staff opting to instead broadcast programming that may have already been pre-recorded, is fed by satellite or otherwise automated with or without the addition of voice-tracking," says Corey Deitz, a 25-year veteran radio broadcaster and author.

Voice-tracking is a controversial technology which allows DJs to pre-record complete radio shows while making them still sound live.

What are DJs earning these days? "According to the U.S Department of Labor, the median wage earned is between $7.13 and $15.10 an hour," says Deitz. "The lowest-paid 10 percent earn less than $6.14. The highest-paid 10 percent make more than $24.92 an hour. Of course, some air talents earn much more but they are the exception."

Deitz has worked on-air in cities such as Chicago, St. Louis, Cleveland, Richmond, Columbus, Virginia Beach and Little Rock. He is also the Radio Guide at About.com His book, "The Cash Cage", provides an inside look at what the Radio business is really like.

For more information, visit:

http://www.thecashcage.com

About Corey Deitz: Deitz is a 25-year veteran broadcaster who has seen the business from small to major markets. He currently does a syndicated morning show based out of Little Rock, Arkansas. He is also the Radio Guide at About.com (http://radio.about.com) where he writes about various aspects of Radio on a regular basis.

20frequency

ref http://www.k5rmg.org/A-soup.html

in most definitions microwaves start at 1GHz or 30CM

what frequencies "microwave ovens" use is irrelevant as marketers can pretty
much name anything what they want.

This is an auxiliary transmitter with a shot tower to use when the shared
WCBS and WFAN tower is being maintained and in case of an emergency.

They are NOT reducing power.

# 2209. For sale: Partial interest in AM/FM station in Alaska.

For sale:

Partial interest in AM/FM station in small coastal
Alaska city.

(The "Radio Crazy is baaaaaaakkkkk!!) Hi!

This is a joint venture. There is an element of risk
and you could lose all or part of your investment.

Active or inactive investors with at least $10,000
each are welcome. All investors would be on the board
with full voting rights if desired. No individual may
own over 49 percent. This means me too!

AM is 1 KW fulltime. Low dial spot, non-directional.
FM is class "A".

No real estate is included.

Total consideration will be under $100,000. This is a
STEAL, folks!!

Tel: (478)741-1710 in Macon, GA.

I am not going to waste time giving out the name of my
parole officer. You regulars already know it. HI!

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"
aka Moron Gottesman
aka Maven Gottesman.

I assume that 35 kW is for the backup tower, although the question remains why 35 kW? Did the FCC limit the power because of interference caused by high angle radiation, or could the backup tower not take full power from both WFAN and WCBS? Also what is the "2" in ND2 all about, I can't see any difference day and night?

FCCInfo.Com lists WFAN New York with a CP to change power to 35 KW day and night (with "Mode" ND2, non-directional 2 (whatever 2 means...non-directional different patterns day and night...hello???).
>>

Only for its auxiliary stick, not its main stick.

It's main remains 50 kW, as ALL U.S. Class As must operate, unless grandfathered (Bakersfield's 1560 only) or a former Class I-N (Alaska only).

ND-2 = non-directional, different "notified" efficiencies day and night.

660 and 880 can also be diplexed into the auxiliary, as they are already diplexed into the main.

So, these operations are theoretically possible:

1) 660 and 880, each with 50 kW, into the main,

2) 660 with 50 kW into the main and 880 with reduced power into the auxiliary,

3) 660 with reduced power into the auxiliary and 880 with 50 kW into the main, and

4) 660 and 880, each with their respective reduced powers, into the auxiliary.

Yeah, why is that?

http://en.wikipedia.org/wiki/Microwave

(For the non-curious, the paragraph of interest says:

Microwaves, also known as Super High Frequency (SHF) signals, have wavelengths
approximately in the range of 30 cm (1 GHz) to 1 mm (300 GHz).

)

I assume that 35 kW is for the backup tower, although the question remains why 35 kW? Did the FCC limit the power because of interference caused by high angle radiation ...
>>

That is the consensus view ... the high-angle radiation towards co-channel stations with the short auxiliary and 35 kW was about the same as with the tall main, and 50 kW.

I guess under a CP case, a Class A is no longer allowed to increase its signal towards a station of lesser class [ * ] .

Under the old rules, a Class A could not increase its signal towards a station of the same class.

For this situation, WSAI had to install a DA which protected WWKB/1520 and ZNS-1/1540, to about 40 kW. Before, it sent more than 50 kW towards those two Class As.

[ * ] Look at WOR's CP DA ... it must provide substantially greater protection to CKVM, and CKVM has been dark for some time, although it is still notified.

I've noticed that the CDBS now often has separate day and night listings,
even where the parameters are the same. See the applications for WYCB and
WOL for example. They are both Class C stations.

a pretty safe assumption would be that the management and accountants took a
look at the cost of a full power back up and said something like: "figure
out a way to do this for 30% less"

with a 50 kW AM transmitter the power draw will be about 100 kW (maybe a tad
less). if it needs to have generator power the cost would skyrocket. a new
100 kW gen (N gas powered) at this years prices costs from $43,000 to
$60,000 installed (depending on site requirements). deisel would be just a
little less.

Did the FCC limit the power because of interference caused by

I would have been terribly insulted if the Democrats had preached hatred, I expected otherwise last week but got it on TV from the Republicans.

I'm glad that I don't live in the United States, where 45 Million go without the right of health care and most think that the real issues with poverty have to do with the fact that the poor are in the way and fucking up the statistics.

Such a great country, full of so many imbeciles who are told so much crap, which they believe.

As much as I used to enjoy shortwave listening, the times have changed.
Much of the unserved land mass you mentioned is now covered by Canada's
domestic satellite radio and TV services. You're worrying about one
shortwave signal while rural families are snuggled in their homes tuning in
CBC radio and TV, CTV and even TV Land.

>
> WWJ remains all news, but the teletype sound was dumped years ago.

When I worked at WTAE, and Ted Atkins came to the station, I was the one assigned to record the teletype machines for the loop he wanted on-air when the Drake-conceived 20/20 News format was to start, along with the launch of the legendary Bill Drake oldies format (wow! That was 31 years ago this week!) on Labor Day weekend. (For those not aware, Atkins was a disciple of Drake, having worked for RKO with CKLW and KHJ before coming to WTAE.)

I never really liked the sound (KYW had been using it for years, since the start of the Newsradio format that was spawned by Group W) so my recording was, shall we say, less than spirited....the several machines were mic'ed from a distance, which in my mind was appropriate since the noise was to, I thought, be similar in nature to what one would hear if the machines were "in the newsroom" where the newsreader was "stationed" so that the news might be assumed to be "the lastest word."

Well, that wasn't good enough for Atkins, and he took me back to the room and showed me how he wanted it mic'ed....with the lid open, a broomhandle laid in back of the paper, so as to lift it and make the keys go clack-clack-clack, and the mic stuffed down the front of all of it, so as to be right there. In fairness to Ted, through all of this he was respectful and instructive, so don't get any ideas that my encounter, then or ever, was anything less than this...I learned a lot from Ted, and my own career in radio was as good as it was, in no small way due to the time I spent working under Ted Atkins at WTAE.

So it was all theatre. That I already knew. But I never really understood why it is that we had to put our listeners' heads into the teletype.

16 X 16 ft double glass doored soundproofed room, The walls are 14 inches thick and insulated.with a dead space in the center .
The cork walled room overllooks a patio with a kitchen . The bathroom has stereo speakers in the ceiling and a shower .
The patio has a fridge, microwave and NTSC vid monitor,stereo speakers and a ratty sofa if you're into
nooners in the fresh air . The offwhite patio walls can be painted chromakey blue if you do video inserts .
On the other side of the room are double doors that connect to a large two mic narration booth . It's setup now for internviews and phoners . The booth has 2 mic-line preamps that feed any rooms computer record system with talkback (ifb) It could also feed an Isdn line - directly . You supply the codec (telos ) . The booth walls could have your logo on it .
The narration booth has another door that opens to a control room with national and network commercial and documentary credits .
You park 4 ft from control room window on ground floor. This is good if you unload equiptment or are worried about theft/vandalism . Your vehicle is protected by infrared motion dectector lights . This is is big issue in this part of central Hollywood . We have unusual zoneing that permits you to Live and Work here . Next door is a commercial printer . We are zoned residential . No commercial signs for us .The tradeoff for no signs and being zoned residential is that the owner of the building cant screw with the rent .
This place is under rent control . You would have to be low profile about "business" .
A lot of parking for your guests at the corner Rite Aid drug store . You will have 24/7 tech support
from a FCC Licensed broadcast engineer . $900/month first & last 1 year lease . $1800 to move in
need to give present tenant not in the business 30 days notice .

Email for .jpgs,equiptment list that is for your use and more possiblities . This would also be a good choice for a voiceover talent, Include your resume . If you need a computer workstation and website we have that for you as well .

Really? FM quality means a S/N ratio of at least 65dB and
and no more than 1% peak distortion, most of it low
harmonic. This requires even with the best digital codecs
at least 96 kb/sec, and probably a bit more (for stereo,
of course .... for mono the FM S/N level should be set
at more like 75 dB.)

What is the bandwidth of these digital signals that get
96 kb/sec?

Amateur Radio Newsline™ Report 1412 September 3, 2004

The following is a message from the Amateur Radio Newsline Support Fund. Here's the funds administrator, Andy Jarema, N6TCQ.

--

Well, here I am again, so theres obviously another financial crisis that Amateur Radio Newsline is facing. And this time its a real doozie. Let me explain it to you.

During the summer many of you are away and donations dwindle to a mere trickle. At the same time, some of our biggest yearly expenses occur during July and August. This includes the Young Ham of the Year Award presentation that we host every year in Huntsville, Alabama. While we had planned ahead, we did not know exactly how much we would need and we were caught short. The price of airfares was up as was the cost of hosting the mini banquet for our recipient, her family and friends.

Added to that were higher than anticipated telephone costs to cover the breaking news stories we brought you over the summer. And right now that leaves us with less than $50 in the bank and several hundred dollars in outstanding bills that must be paid right now to keep Amateur Radio Newsline coming your way.

As we have said before, Amateur Radio Newsline is a federally charted 501(C)( 3) and California state not-for-profit corporation. For most United States residents it means that your donation is tax deductible.

So please help keep the news on your local net, on your repeater and on your computer by making a donation to the Amateur Radio Newsline Support Fund. Its address is Post Office Box 660937, Arcadia, California. The zipcode is 91066.

Again that's the Amateur Radio Newsline Support Fund at Post Office
Box 660937, Arcadia, California, 91066.

On behalf of the entire all volunteer world-wide Amateur Radio Newsline team, I thank you for listening to this appeal and for your ongoing support that keeps the news of Amateur Radio coming your way.

I'm Andy Jarema, N6TCQ. Now Amateur Radio Newsline report 1412.

--

Thanks Andy. Now Amateur Radio Newsline report number 1412 with a release date of Friday, September 3rd, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The ARRL bandwidth based restructuring proposal causes controversy and maybe some reconsideration. Find out more on Amateur Radio Newsline report number 1412 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: REACTING TO THE ARRL BANDWIDTH PROPOSAL

An ARRL proposal to restructure Amateur Radio along bandwidth lines has caused a lot of discussion in the nations ham community. And it may cause the League to rethink its position. Amateur Radio Newsline's Mark Abramowicz, NT3V, is in Philadelphia, and has the rest of the story:

--

Shortly after the ARRL began circulating the proposal and posted it on its website, the e-mails, phone calls, HF, VHF, and digital-mode traffic took off.

And now, Amateur Radio Newsline has learned the bandwidth proposal may be tabled for more study when the ARRL's executive committee meets next month.

That confirmation comes from W6OBB in Nevada. If the call sign isn't familiar, the name behind it might be. He's Art Bell, host of the weekend edition of "Coast to Coast AM" heard on more than 500 commercial radio stations across the nation.

Bell, who joined the fight against Broadband Over Powerlines several months ago, and featured the subject on his radio program, expressed concern about what he called a Draconian proposal that would over-regulate the ham bands. Bell tells me he relayed that concern in a phone call to ARRL President Jim Haynie W5JBP.

Bell characterizes the discussion as cordial and at the end, he says Haynie related he was re-evaluating the proposal based on many comments he had received.

"He indicated to me and told me I could pass on to you that they're looking into pulling this whole thing back and taking a harder look at it," Bell says.

While Bell says he believes the ARRL had good intentions with the proposal, it may have gone too far.

"What began as an examination by the League of how we could possibly encourage the digital mode, it went a little too far and began to over-regulate," Bell says. "I'd kind of like to see it go the other way and I'd like to see our bands freed up."

Haynie says he's gotten a lot of feedback on the proposal. He says it came from the League's desire to promote - not restrict - innovation and experimentation. He says it was also a response the Federal Communications Commission's desire to see more innovation from the ham community.

"I think we rose to the challenge," Haynie says. "We have demonstrated Software Defined Radio that just knocked their socks off, in my view.

"We have come up with some other stuff - Joe Taylor and some of his things for moon bounce. And I think the Amateur Radio community needed a wake-up call is what they needed and I think that's what we've gotten and were given."

Haynie says it's clear the digital modes like RTTY and PSK 31 need attention.

"Where do we want to go to the future?" Haynie asks. "And, as I mentioned a couple of years ago, I took my model 28ASR and took it to the scrap man. But that's the standard that's used today is 850Hz shift at 45 baud.

"Well, we don't do too much of that. I'm not saying there's not RTTY enthusiasts out there, there are and I appreciate that and I know that and I want to protect their rights to do those things."

Art Bell says he and others don't object to digital innovation. But he doesn't think the proposal hits the mark.

"There are many with differing interests who are not too pleased with the proposal and, on the face of it, it simply does not make sense," Bell says. "I agree that we should encourage the digital modes and development, but we shouldn't try to push something into place that is not techincally ready to happen yet."

Restricting bandwidth, Bell says, won't promote innovation.

"Why do we have to cut and slice and dice and regulate," Bell says. Why not just let anybody virtually go anywhere and let all of us just live together with some gentlemen's agreements which we have now and which work very, very well on most bands?

"So with that in mind, look at the Canadians. The Canadians have a 6khz limit and they can go anywhere on the band they want from the bottom to the top. And I don't see why that would not apply and work well in America."

Haynie says he wants to hear more from hams and he's encouraging all of us to get into the FCC's Part 97 rules and share input on the proposal at the ARRL's website, that's ARRL-dot-org.

"Look at the rule book and see what's there now, "Haynie says. "And, is there something that could be changed that would allow a new technology to be developed, then that's what we want to know."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

More on the ARRL proposal and reaction to it in upcoming Amateur Radio Newsline reports. (ARNewsline(tm))

**

RESTRUCTURING: DROPPING CW TESTING IN CANADA

Meantime, to the north, another form of restructuring proposal is being considered by hams in Canada. This as telecommunications regulator Industry Canada publishes a Gazette Notice called "Recommendations from Radio Amateurs of Canada to Industry Canada Concerning Morse Code and Related Matters".

The Radio Amateurs of Canada proposal deals with the WRC-2003 decisions concerning Morse as a compulsory qualification for High Frequency operation in the Amateur Service. Radio Amateurs of Canada has recommended that Industry Canada delete the mandatory aspect of the requirement for Morse testing but leave it as a voluntary qualification. This, because knowledge of code may be required for reciprocal operation in those countries retaining a Morse requirement.

The notice was published on Saturday, August 28th and gives Canadian radio amateurs sixty days in which to respond. Radio Amateurs of Canada recommends that the nations ham community endorse this proposal. (RAC)

**

ENFORCEMENT: 10 METER INTRUDER WARNED

Here in the United States a commercial business has been warned to stay of the 10 meter ham band. The FCC's Daryl Duckworth, N-N-Zero-
W, explains:

--

Duckworth:"Dandy Service Corporation of Warrendale, Pennsylvania, was
issued a warning notice fot unlicensed radio operations on 28.085 Mhz. Two of their vehicles were the source of transmissions on August 5th of this year in Michigan on Interstate 94 at mile-marker 262."

--

Dandy Service was told to advise its drivers that operation of radio transmitting equipment without a license is a violation of the Communications Act of 1934. That it could subject the operator to fine or imprisonment, as well as an seizure of any non-certified radio transmitting equipment. Monetary forfeitures normally range

from $7,500 to $10,000. (FCC, RAIN)

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N7VGS repeater serving Star Valley Wyoming.

(5 sec pause here)

**

THE BPL FIGHT: IT MAY BE COMING TO SO. CAL.

A heads up warning to hams living in the California counties of Los Angeles, San Diego and Riverside. According to ARRL officials in the Southwestern Division, Broadband over Powerline may be coming your way.

Writing in the latest issue of the division electronic newsletter, Director Art Goddard, W-6-X-D, and Vice Director Tuck Miller, N-ed-6-T, say that power companies in these areas may be considering BPL as a new business venture. The two officials add that the regions Amateur community needs to work together to see if they can head off these B-P-L flirtations before they become entrenched on the ham radio bands.

The report goes on to say that local ARRL Section Managers are already on top of the situation. The S-M's are reportedly forming Local Action Teams to work on all levels in handling the B-P-L threat to the area. (ARRL Southweestern Divisioon Communicator)

**

OPERATIONAL NEWS: TO PL OR NOT TO PL - THATS THE SERA QUESTION

Repeaters in eight states and the hams that operate through them may soon face mandatory use of continuous tone coded squelch. Then again, they may not. Amateur Radio Newslines Gary Pearce, KN4AQ, is in Raleigh, North Carolina, trying to sort it all out:

--

SERA, the SouthEastern Repeater Association, ignitied a furious debate when its Board of Directors voted to require the use of tone as a condition for frequency coordination for all repeaters in its territory. SERA is the frequency coordinating group for eight southeastern states: Georgia, Kentucky, Mississippi, North and South Carolina,| Tennessee, and parts of Virginia and West Virginia.

The SERA Board voted at its June meeting that some form of tone access will be a condition of coordination for all new repeaters effective immediately. Existing repeaters will need to adopt tone

within two years, by July 2006. The board was acting on a motion by Steve Grantham AA5SG, the Director from Mississippi. The goal of the policy was to reduce the number of complaints that SERA coordinators receive from repeater owners whose carrier access repeaters are keyed up by users of a co-channel neighbor.

In discussion at the meeting, the new policy was softened some when coordinators asked if this meant that repeaters would be automatically decoordinated if they decided not to use tone. The answer, according to an article in SERA's magazine the Repeater Journal, was "no, but…" SERA would not entertain an interference
complaint from repeater owners who remained carrier access.

The debate began in earnest when the August issue of the Repeater Journal began arriving and the ARRL published a story about it on their web site. Repeater owners argued the merits of tone itself, along with complaints that SERA didn't poll its members, and non-member repeaters, before making the decision.

The decision may not be final, according to SERA President Roger Gregory W4WRG:

--

Gregory: I've received, and we have received a lot of comments pro
and con about this policy. And all I can say right now is that we're
taking a second look at it and it's not really written in stone at
this time as to what kind of decision we're going to make one way or
the other."

--

SERA's next Board meeting takes place in January, but the group can
reach an earlier decision at any time through an e-mail ballot.

Reporting for Newsline, this is Gary Pearce KN4AQ in Raleigh, North Carolina.

--

So will the hams in SERA coordinated states have to use tone access on every repeater? Right now, the answer seems up in the air. (KN4AQ, ARNewsline(tm))

**

HAM RADIO IN SPACE: ISS GOES CROSS-BAND REPEAT

Speaking of repeaters. there's a new cross-band F-M system in space
and its home is on the International Space Station. This, as the ARISS program announces that the amateur radio equipment aboard the orbiting outpost is now on the air in repeater mode.

The downlink frequency remains 145.80 MHz. The new uplink frequency is 437.80 MHz and all frequencies are subject to Doppler shifting.

ARISS leaders say that they realize that many hams will miss the packet station that the cross-band F-M voice repeater replaces. Burt the groups leaders say that the cross-band repeater will allow further experimentation of the ISS amateur radio system.

For further information on working satellites and adjusting for Doppler shift, please review Emily Clark's (W0EEC) excellent presentation on AMSAT's website, http://www.amsat.org/amsat-new/information/faqs/Intro_sats.pdf (ARISS)

**

RADIO LAW: FCC ADOPTS RULES TO ENHANCE NETWORK OUTAGE REPORTING

Back on mother Earth in Washington, the Federal Communications Commission has adopted new rules requiring wireless, wireline, cable, and satellite telecommunications providers to report information about significant disruptions or outages to their systems to the Commission. The FCC says that these reports must be filed electronically. The Commission also ruled that all sensitive information collected as a result of these new rules will be protected from public disclosure. The full story is on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-250543A1.doc (FCC)

**

RADIO LAW: FCC REDEFINES DTV CONVERSION SCHEDULE

The FCC has also taken steps toward deciding exactly which channels broadcasters will end up with when they switch to digital television. By unanimous vote, the Commissioners have set up a timetable that will decide by June 2006 which channels people will tune in on to see their favorite programs. .

FCC chairman Michael Powell says that the vote signals that substantial progress has been made in switching television from its current analog transmission system to digital. He adds that the national dialogue has shifted from wondering if the DTV transition would ever end to exploring when it should end. (FCC)

**

RADIO LAW: CANADIAN GROUPS CHARGE THAT HD RADIO WILL HARM RECEPTION

Meantime, Canada charges that High Definition or Hi Fi digital Radio will harm reception of Canadian stations inside its own border. At least that's the headline from the August 30, 2004 edition of Inside
Radio.

According to the story that follows, both the Canadian Boadcasting Corporation and the Canadian Association of Broadcasters have asked the country's technical regulatory agency to protest iBiquity's In-Band On-Channel digital radio system. They allege harmful effects on current A-M reception, especially during nighttime hours. The whole story is on-line at http://tinyurl.com/6uubn and www.insideradio.com (CGC)

**

HAM AWARDS: THE RCC IS BACK AND ITS FREE

Some good news. The Rag Chewers Club or R-C-C award is back, but it will not be sponsored by the American Radio Relay League. Bill Pasternak, WA6ITF, has the details:

--

Its the Society for the Preservation of Amateur Radio -- better known by the acronym SPAR that will be sponsoring the new R-C-C. The group has announced that as of September 1st it will adnminister this fun award and will do so following the old ARRL rules.

According to SPAR, all a ham has to do to get an R-C-C is to present evidence of having had an actual one on one Q-S-O that lasted at least 30 minutes. The QSO can be made on any legal amateur frequency.

In early 2004 the ARRL announced it was discontinuing the Rag Chewers' Club Award due to a lack of interest. Conversations SPAR held with hams seemed to indicate that the lack of interest was due mainly to the cost of the award. So SPAR says that the award will be available free of charge to all licensed radio amateurs.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los
Angeles. Jim.

--

All certificates will be distributed by e-mail as Adobe P-D-F files that you can print and frame. The awards are numbered and endorseable by mode. Complete rules and an on-line application are on the SPAR website at www.spar-hams.org. (SPAR, QRZ.com)

**

NAMES IN THE NEWS: HAPPY 104 BIRTHDAY TO KJ6KQ

And less we forget, a belated birthday greeting goes out to Bill Diaper, KJ6KQ who turned 104 on August 12th. That's right, we

said
104, and probably making him the oldest living radio amateur in the United States, if not the world.

According to a posting on the Q-R-Zed dot com by Tom Ferguson, N6SSQ, website, Bill is a member of the Pacific Amateur Radio Guild and these days resides in the Masonic Homes in Union City, California. Tom says that there is a radio shack in the basement that Bill used up till a year ago but is very difficult for him to access now. That's because the station is in the basement next to the laundry room. Bill says it is dark and damp down there and must get assistance to get there and have someone tune and adjust the frequency on the rig for him.

N6SSQ adds that the Pacific Amateur Radio sent Bill a flurry of letters and cards on his birthday and that he was very pleased to get them. (QRZ.com)

BREAK 2

This is ham radio news for today's radio amateur. From the United
States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAM FAIR JAPAN ATTRACTS 30000 ATTENDEES

Turning to the ham radio social scene, Japan's largest hamfest, the JAIA Ham Fair, was held the weekend of August 21st and 22nd. The venue was Tokyo's Big Sight International Convention Center. Among
the highlights of gear being shown were Yaesu and Icom both showcasing their high end $10,000 H-F transceivers. Kenwood did not match in the super high end radio category but had a well attend ongoing demonstration of their ARCP-480 Radio Control Program.

But the manufacturers and dealers were only a small part of the show. Over 170 radio clubs also had booth space at the show. These ranged from large organizations like JAMSAT, the Japan Shortwave Club, and SEANET down to local organizations who use their booth for flea market sales.

Also present were a wide variety of organizations promoting every aspect of Amateur Radio. This included mountain-topping operators, microwave activity enthusiasts and antenna construction experimenters. Operations represented included facsimile, SSTV, ATV,

RTTY, 10M FM, 6 Meters, CW devotees, QRP, homebrewing, classic rigs, military surplus and even a contingent from the A-M community.

Ham Fair is Japan's largest annual gathering of radio amateurs from
the Pacific Rim. An estimated 25,000 to 30,000 attended this years event. (WIA News)

**

THE SOCIAL SCENE: WSWSS 2004 FALL CONFERENCE IN FRESNO CA

Back on this side of the Pacific, the Western States Weak Signal Society tenth annual VHF and UHF Conference takes place Saturday, October 9th. The venue is the M2 Antenna System Facility, at 4402 N. Selland Ave in Fresno, California. Registration starts at 8 AM with the conference program slated to begin at 9 AM. For more information write to David Peters, KI6FF, 14291 Middletown Lane, Westminster, California, 92683. You can also e-mail David to ki6ff@juno.com (VHF Reflector)

**

HAM RADIO BUSINESS: OAL NO LONGER REPPING DEM

In news from the ham radio business world, David Clingerman, W-6-O-A-L says over the V-H-F Reflector that his company known as the Olde Antenna Lab of Denver, Colorado is no longer representing Down East Microwave, Inc. Dave says to please refer your help questions, pricing information and orders directly to Down East Microwave in New Jersey. (VHF Reflector)

**

HAM RADIO NEAR SPACE: UK BALLOON LAUNCH LICENSED FOR SEPT. 12

G3ZHI reports that a license has been granted for a United Kingdom high altitude ham radio balloon flight. The project is now authorized for operation on 2.500 GHz on Sunday, September 12th. The license has special permission to operate at up to 50,000 feet instead of the usual flight ceiling of 2,000 or 5,000 feet.

The launch is scheduled to take place at about 1.30. Plans are still afoot to relay pictures via the new 13 centimeter GB3FT repeater if the system is completed and on the air in time for the flight. More information on this experiment as it becomes available. (G3ZHI)

**

WORLDBEAT - UK:: NEW RSGB ON -LINE

There's a new ham radio promotional video out and it has a definitely
British flair. And in an effort to help to promote amateur radio, the recently-created Essex Amateur Radio Club has started streaming

the new RSGB video "What is Amateur Radio" on the Internet.

The Essex group is providing it at speeds of 26 kb and 57 kb so it can be viewed by those using dial-up as well as broadband. If you want to take a peak it is available in cyberspace at www.essexamateurradio.org.uk (RSGB)

**

WORLDBEAT - NORWAY: HACKER DEFEATS AIRPORT EXPRESS

Meantime on the European mainland the same Norwegian hacker known for developing D-V-D encryption-cracking software has apparently struck again. This time his target is the security system that protects Apple Computer's wireless music streaming technology.

Jon Johansen has released a hacking system on his website that provides a key to unlock the encryption Apple uses for its AirPort Express. The unit lets users broadcast digital music from Apple's on-line iTunes Music Store on a stereo that's not plugged into an Apple computer. This permits other software applications from competitors to work with the proprioritary AirPort Express codec. Apple is reportedly considering taking legal action in the case. (Published reports)

**

RADIOSPORTS: HOST STILL NEEDED FOR 2005 ARDF GAMES

Turning to the world of radiosports, a reminder from Joe Mell, KZ0OV, that a group is still meeded to host the fifth U-S-A Amateur Radio Direction Finding Championship games. This, in the summer of 2005.

Some prerequisites for being the host include having suitable sites for 2 meter and 80 meter hunts along with the ability to provide foxhunting courses. There are also the organizational aspects to consider. These include providing registration services, housing for the contestants, meeting rooms, transportation to and from the hunt areas and lots more.

If your club is interested in hosting this event, please contact Joe by e-mail before September 15th to homingin@aol.com. Full details about the games and how to become the 2005 host is on line at www.homingin.com (ARNewsline(tm))

**

DX

In D-X, word that K3GV portable VY2 is active on 15 and 20 meters as from Prince Edward through the 12th of September. The island counts as NA-029 for the RSGB Islands on the Air award program. QSL's go to
K3GV at his callbook address. (RSGB)

And while this is short notice, the All Asian SSB contest will take place beginning at 00.01 U-T-C on Saturday, September 4th and will run for 48 hours. Operation is on 160 through 10 meters with stations in Asia trying to work the rest of the world. The official exchange for this one is a signal report and the operator's age. (WIA News)

**

THAT FINAL ITEM: NRC MEETS IN BATAVIA NY

And finally this week, a big meeting of broadcast band SWL's is taking place as we go to air. Here's Fred Vobbe, W8HDU, with the details:

--

Audio report only. Download the newscast at www.arnerwsline.org

--

Fred has promised to be here net week with a full wrap-up on this years gathering. (W8HDU)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim
Damron, N8TMW, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

>What does that prove? That the government is made up of bozos and idiots.
>
>What if the government issues a statement that smoking cigarettes is good for you
>and gets rid of cholesterol? Would you start smoking?

Uhhhhhh.... yes?

BTY, newsgroup(s), remember that although an AM tower radiates
completely, the current distribution on the tower is max at the base
of the most common US towers (1/4 wavelength). The voltage max is
about halfway up the tower. So .... ..... .....

I know many transmitter engineers, AM & TV, that had cancer-type
diseases as they retired.

And as far as trusting the government reports on NIEMR, would this be
the same government that (a) gave all the broadcast stations to big
corporate donors, or (b) told all rescue workers at the WTC that the
air was safe, or (c) found huge piles of WMD in Iraq?

>single set! How effective can that be to that customer?

It's really very easy to maintain a limited spot load -- when you
sell out, you raise your rates to the point where you're not quite
sold out...and keep doing that, over and over. This has the added
benefit of driving marginal businesses and slow-paying accounts off
your station and onto your cheaper competition. Salespeople make more
money with less work. Everybody wins. Once upon a time most
successful stations did this. Yes, you have to cut rates in slack
periods, but if managed correctly the overall trend is always up.

But then came the entrance of the huge publicly-traded corporations,
and Wall Street demands for revenue and cash flow increases that
wildly exceeded the rate of economic growth. I know of one major
company that insisted on 15% annual cash flow increases in a region
with 2% economic growth. This is not sustainable for more than one or
two quarters. But without such numbers, the stock would get hammered.
And some managers, such as one recently departed major figure whose
name will go unmentioned here, were so focused on the immediate
quarterly numbers that they simply refused to consider the long-term
impact on the industry. Somehow we forgot concepts like demand-based
pricing (a staple of the travel industry for decades) and grid rate
cards.

If it takes a Clear Channel to get the industry to wake up, then so be
it. The downside is that a lot of people will pay for this with their
jobs, as I'm sure short-term cash flow budgets won't change and the

cost-cutting that results will be brutal.

>>
Also what is the "2" in ND2 all about, I can't see
any difference day and night?
>>

It is common, now, to file for ND2 or DA-2 even though the desired mode is actually ND1 or DA-1.

That way, if one mode proofs OK, yet the other mode doesn't, there are more options available.

In theory, one could refile for ND1 or DA-1, but that's another Form 301, another big check to the consultant and another big check to the communications attorney, and ... in short ... a waste of money.

In the days before dial-a-power, ND2 made some sense for the case where a station could, say, make 1 kW work days, but just missed 1 kW nights, and it didn't want to refile for 1 kW-D, 0.5 kW-N.

So ... 1 kW-D and no resistor, and 1 kW-N with a resistor, simulating a less efficient radiator, was a possibility.

Today ... 1 kW-D and 0.82 kW-N might be one possible example, for a station with 225 degree stick, which is required to radiate no more than the Class B minimum efficiency with 1 kW at night.

I think San Diego's ex-KDB (or was it ex-KGB ... both are historic calls in SoCal) is operated similarly to this.

Recently 1010 WINS New York discontinued the teletype. Some consultant probably told them it was old-fashioned. They received many complaints. It's back. When using a non-digital tuner, hearing that sound lets listeners know they're at 1010 without looking at the dial.

You mean cross posting imbeciles like you.

The Republican convention was very positive. The only negatives were the
reported contrast of the Democratic candidates Senate record. Not much
can be done about that except vote Kerry out of office.

I spent 20 years in New York and recall the WFAN signal was one of the worst. I was in the West Village by the river and could barely receive it. I couldn't receive it in my office at WOR in Times Square.

I get it better in New England than in NYC.

Do yourself a favor and be careful who you call an imbecile. I see one of those imbeciles got you to believe that there's such a thing as a "right" to health care.

I pored over our Constitution from beginning to end...you know, that document which is our fundamental and supreme law...the one which delineates the rights of the people and the limits on the powers of government. It's a strange thing, but nowhere in that document did I find any "right" to health care. Did this "right" get invented when I was asleep one night, or is this just another ploy to get the US government involved in something it should keep its grubby paws out of, lest it make the usual mess it makes out of everything else it touches (while spending OUR money to make that mess)?

> Microwaves, also known as Super High Frequency (SHF) signals, have wavelengths
> approximately in the range of 30 cm (1 GHz) to 1 mm (300 GHz).

This is a pathetic attempt to avoid the real issue and turn the argument another way to avoid the statement they were unable to dispute.

Saying microwaves magically start at 1000 Mhz, and saying 999 Mhz is not, and 800 Mhz is not, is bullshit talk.

Regardless of where you want to call it, the FACT remains that Microwave Ovens were manufactured that cooked your food with frequencies in the 800 Mhz region.

So, since we can cook food and heat at 800 Mhz, and since cell phones are using the same frequency range, we can make a definite connection here.

Any attempt to shift the discussion to one about where we now want to classify the word "microwaves" to be appropriate is just childish and ignorant, and nothing more than diversion from the point about cell phones being dangerous.

LEGAL exposure to certain RF in Russia can be different than the LEGAL limits in the US. As if RF follows any of these laws, or as if a cell phone is not going to harm you just because you change the definition of what can be legally called microwaves.

What was considered low blood pressure a decade ago, is now being called high blood pressure in an attempt to sell more medication and make more money. Just the AMA changing the imaginary boundary line did not make us all suddenly have high blood pressure, just as your changing what is now considered microwaves has no effect on this issue either.

> ---------------------------------------------------------------------------
> If there's nothing that offends you in your community, then you know you're not

In Chicago, when WBBM flipped to all-news, they had the teletype sound in the background, which always went on when the news anchor opened their mike, even during "CBS Mystery Theater." When Westinghouse took over WMAQ and flipped to their "You Give Us 22 Minutes..." concept of all-news, complete with the teletype, 'BBM dumped the teletype. In the early 90s, when they decided to push their CNN affiliation during the first Gulf War, 'MAQ dumped the teletype and all of the trappings of the Group W all-news format and stayed that way until the station met its demise a few years ago at the hands of The Score.

> and our customers. Of course, my argument was still right... that too many
> commercials is an incredible turnoff factor for listeners, and if people
> don't listen, no one hears the spots.

No shit. And if you have too many spots, all you have to do is double the price. Half of the advertisers will drop, the other half will pay their share, and you just cut half of the spots from your station. So simple, yet many are too afraid to turn down any advertiser to do it. We did it and it works just fine. Better to turn away advertisers than listeners! If you have listeners, you will always have advertisers, but you don't get listeners from having more advertisers, you get LESS listeners.

> Now that I am a listener, I am one of the first to turn away from a station
> that plays too many spots, especially if the spots are totally uncreative,
> boring and repetitive.

This is the problem with those in radio management, they never just ask themselves what THEY would listen to. All you had to do is ask the DJs what they thought, as they are the ones that listen to the station longer than anyone. If they get sick of a song or spot, it means time to drop it!

> Sometimes stations play the same spot twice during a
> single set! How effective can that be to that customer?

I never understood that. If I was the advertiser, I would much rather have had the extra spot play in another hour or on another station than waste two in the same break. Besides, it pisses listeners off, and doing that means people will remember to NOT buy your product, just as they never buy from companies that send spam or telemarket.

> Radio has become ridiculously redundant.

Haven't been able to listen to it in many years.

Three things:

1) You need to recheck the frequency of the magnetrons in microwave
ovens.
2) You need to recompare the power levels between microwave ovens and
cell phones (*cough* 0.3 W v. 1500 W, a factor of 5000 difference
*cough*)
3) *Plonk*

What's wrong with aspartame?

There are people using cell phones now that have been using them for more
than 20 years in Japan. How long do you think it will take for the epidemic
to show up?

Let's see if that's still true after 1050 moves to Lodi.

Wow, someone else finally figured this out. Good for you. People I would explain this simple logic to, would be too afraid to try it because they never want to lose any advertiser and would rather have lots of advertisers and spots and low pay, than a few advertisers paying a lot more.

Problem is, if you are programming shit, you can only charge $5 a spot.

FIRST you get good programming. THEN you have a small sales staff of 3 or 4 people to handle incoming calls from Budweiser, McDonalds, etc. If you have to go out and get advertisers, then your programming sucks.

Finally someone here that talks some sense.

>> programming, is bogus.

Would you consider this a legal ID or a bogus ID? I say "bogus", but the tv station obviously says "legal".

Only a visual ID (no audio ID) with the call letters, channel number, and the city of the OTHER tv station that they are not in big easy to read letters followed by the call letters, channel number, an city of the station that they really are, in small hard to read tiny letters so small that you have to be right up at the screen AND holding a magnifying glass to make it readable to you.

Advertising is sold by delivery of audience. If you cut spot load by 50%, and do not increase listenership, your revenue decreases by half (assuming you are selling all your inventory).

> So simple, yet many are too afraid to

> listeners.

There are simple metrics applied to the buying of ad time, and they relate to the cost per listener, experessed as cost per thousand, cost per point, etc. Simply reducing spot loads does not improve the rate on the remaining accounts.

Actually, a DJ listens far more per week than all but the most agressive listeners. The best way to find out what listeners want is to ask the listeners. Which is what most major stations do.
>

It's researched and very effective in increasing memorability through repetition. As are bookends.

Generally, if this happens, the advertiser has paid extra to make it happen.
Because it works so well.

Chris,

You're referring to a technology called RDS (radio data service), in which an RDS-equipped station (not all are) can transmit data to an RDS-enabled receiver (again, not all are). Precicely what data is transmitted would be up to the station management, but it can certainly be program-specific information.
